Although most farmers who grow winter wheat had intended to increase their acreages last fall, the late harvest and the scarcity of help kept the area sown to about that of the preceding year. Considerable of the crop had hardly enough top to enter the winter satisfactorily, although otherwise the young plants appeared to be vigorous. After the snow cleared off, the nights continued very cold, and the crop suffered from the alternate freezing and thawing of the unprotected fields. The present appearance of the young wheat is not encouraging, most of the fields being more or less brown and patchy, and all of them standing in need of good spring rains, as the latter part of March and the early days of April were cold and clear with practically no rain, while frequent winds helped to make the ground exceedingly dry for the season. A few good warm showers may yet help the crop to pick up, but the general opinion is that a good deal of drilling in of spring grains will be necessary, and also some plowing up of portions of the fields, in fact some reseeding has been done already. In those counties in Eastern Ontario where fall wheat is raised it has done better relatively than in the western counties where the crop is more largely grown.

Winter rye has also suffered injury by the trying spring weather, but not to so great an extent as the wheat.

Clover, however, has come through better than either wheat or rye. While some heaving has been reported, and while looking sick in places, the general appearance of the fields is encouraging, considering the rather unfavorable spring for young crops wintering over. As correspondents reported, the crop was needing rain in order to receive a good spring start.

Orchards and Live Stock.

Unusually low temperatures during the winter injured some of the buds on tender varieties of peach trees, and froze back a portion of the young wood on some grape vines, but the total amount of damage is not serious. There are complaints of girdling of young fruit trees by field mice and rabbits. The general condition of fruit trees, however, is favorable.

Horses are plentiful, and drivers and undersized general purpose animals are selling cheaply, but heavy working horses are more in demand, and are commanding good prices.

Cattle are in good general condition, although not so many beef animals are being fed owing to the high price of grain and mill feeds. Many dairy cows are falling off in milk from the same cause, and owners are eager for early grass.

The swine industry is at high mark. More brood sows are kept than ever before. What is known as "The Hog Campaign" has been pushed widely and vigorously for several months past, and farmers generally are raising all the young pigs they can feed, considering the discouragingly high prices of all classes of feed and the comparative failure of the corn crop. A Wellington County correspondent states to the Department of Agriculture, "I have raised already 200 sucking pigs, and could sell 400 more if I had them at $7 each." There will likely be a steady increase in the number of hogs from now on, although animals ready for the bacon market are at present relatively scarce.

Sheep are increasing in popularity in various sections of the province. There has been a good lamb drop already, and the prospects for developing this long-neglected class of farm animals are brightening.

Fodder Supplies.

There has been more than a sufficiency of hay, but there is a danger of too much of it being sold. There has also been an abundance of straw, much of which is now being fed. The corn crop, on the other hand, was the poorest for years both for husking and silage. Much of what went into the silo was frosted, making inferior feed, and owing to the early cold weather considerable standing corn was caught in the field and had to remain out all winter. The cereals are so dear that grain is being very sparingly fed. However, there is a good supply of field roots on hand. The bulk of the reports indicate that most farmers have the necessary supplies on hand to make fairly well balanced rations, but that careful feeding must be the order of the day until pastures are ready.

A Brant correspondent to the department describes the general farm attitude when he says: "Most farmers would like to increase their acreage for field production if they could depend upon procuring sufficient labor." However, despite the probable lack of help, an endeavor is being made by many farmers to extend the area of spring crops. A considerable number are about to try spring wheat for the first time, or increase their former acreage. More barley will also be sown. With the unusually dry weather so far prevailing, farmers have been able to get upon the land early, and already a considerable area of spring grains has been put in in the southwestern counties. Complaints are being made as to scarcity of good, well tested seed corn.

The dearth of experienced farm workers continues, and much of the help this season will have to be more or less untrained. A number of organizations, official and voluntary, are now at work to help to supply the need as fully as possible. Correspondents declare that farmers will have to exchange work more than ever and use more horses and larger implements. Wages for married men run from $400 to $500 a year, with free house, garden and cow pasture. By the month good men get from $35 to $50, with board, and in York County as high as $60 is being paid for high-class men.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railroads for the first three weeks of April:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
April 7	$2,830,000	$2,984,000	+ $134,000
April 14	2,833,000	2,935,000	+ 102,000
April 21	2,708,000	3,016,000	+ 308,000

Grand Trunk Railway.

April 7	$1,215,768	$1,359,291	+ $143,523
April 14	1,103,119	1,414,538	+ 311,419
April 21	1,085,031	1,358,972	+ 273,941

Canadian Northern Railway.

April 7	$ 736,200	$ 913,600	+ $177,400
April 14	881,600	932,600	+ 51,000
April 21	765,600	929,500	+ 163,900

The following are the Grand Trunk Railway system reports for January:—

	1918.	Increase.
Grand Trunk Railway:		
Gross receipts	£665,000	*£113,400
Expenses	833,000	106,750
Net deficit	£168,000	£310,150
Grand Trunk Western:		
Gross receipts	£130,450	*£ 6,700
Expenses	169,600	30,800
Net deficit	£ 39,150	£ 37,500
Detroit, Grand Haven and Milwaukee:		
Gross receipts	£ 43,600	*£ 1,950
Expenses	58,600	900
Net deficit	£ 15,000	£ 7,850

---

*Decrease.

Mr. A. S. Muirhead, of Toronto, has been elected vice-president of the Buffalo, Lockport and Rochester Railway.

Three important sessions of the Fire Insurance Commission will be conducted by Mr. Justice Masten at the Parliament Buildings, Toronto, on April 29, 30 and May 1. The question of fire protection will be gone into thoroughly.

Increased Business in March

Bank Circulation Increased $10,000,000—Further Loans to Municipalities—New Savings Deposits—Decline in Demand Deposits, Call Loans in Canada and Current Loans Elsewhere.

	March, 1917.	February, 1918.	March, 1918	Year's Inc. or dec.	Month's Inc. or dec.
Deposits on demand	$448,151,528	$569,266,642	$561,042,236	+25.2	— 1.5
Deposits after notice	888,765,698	908,822,988	921,080,803	+ 3.7	+ 1.4
Current loans in Canada	843,054,466	859,363,147	886,995,222	+ 5.1	+ 3.1
Current loans elsewhere	83,551,225	109,678,140	102,217,679	+18 1	— 6.4
Loans to municipalities	29,877,911	43,535,628	50,652,061	+72.4	+16.3
Call loans in Canada	76,478,708	76,722,163	74,257,877	— 2.6	— 2.6
Call loans elsewhere	161,616,735	160,239,494	167,296,701	+ 3.7	+ 4.4
Circulation	148,265,140	181,695,542	191,328,665	+20.1	+ 5.5

THE above are the principal changes in the bank statement for the month of March. One of the most important features is the gain in circulation of almost $10,000,000 which makes up for most of the decline of the previous month. Bank loans to municipalities continue to increase, the reason no doubt being the difficulty of securing funds in the investment market.

The following table gives record of deposits for the past thirteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1917—March	$448,151,528	$888,765,698
April	471,312,285	874,948,724
May	443,839,847	892,562,657
June	449,689,670	900,510,552
July	450,849,356	929,442,340
August	443,317,275	806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013
1918—January	559,777,237	900,314,256
February	569,266,642	908,822,988
March	561,042,236	921,080,803

Demand deposits continue to maintain their high level, although there is some decline as compared with February. Savings deposits, however, show an increase of over $12,000,000, in spite of war loan payments; this indicates the large number of subscriptions that were paid in full, and also that the country will be able to raise another, and even larger, war loan. It will, nevertheless, be some time before the total savings deposits of over $1,000,000,000 of last November is again reached.

The course of the deposits account during the past six years is shown in the following table:—

March.	On demand.	After notice.	Total.
1913	$357,756,659	$630,434,708	$ 988,191,367
1914	345,590,642	646,143,604	991,734,246
1915	339,514,286	676,875,790	1,016,390,076
1916	389,165,388	738,169,212	1,127,334,600
1917	448,151,528	888,765,698	1,336,917,226
1918	561,042,236	921,080,803	1,482,123,039

Total deposits show an increase of $4,000,000 over February, and constitute a new record. In spite of the fact that most of the cost of two war loans has been paid during the past year, bank deposits have increased by almost $150,000,000.

The trend of the Canadian loans account for the past thirteen months is shown in the following table:—

Loans.	Current in Canada.	Call in Canada.
1917—March	$843,054,466	$76,478,708
April	880,523,897	82,737,417
May	844,890,589	78,514,708
June	839,355,782	76,085,220
July	829,560,700	71,376,788
August	836,429,670	71,204,351
September	855,306,953	72,421,187
October	883,986,860	71,653,719
November	868,973,714	72,178,345
December	858,533,298	71,779,020
1918—January	855,506,506	76,239,201
February	859,363,147	76,722,163
March	886,995,222	74,257,877

The increase in current loans for the month is therefore about $27,500,000, and a new high record is set; during the month of March, 1917, however, the increase was $30,000,000 or over 3½ per cent. as compared with 3 per cent. for this year. Call loans in Canada declined by $2,500,000 and are slightly less than last year.

The following table shows the call loans abroad in March as compared with previous returns:—

	1915.	1916.	1917	1918.
January	$ 85,706,641	$134,248,552	$155,747,476	$132,687,066
February	89,890,082	130,138,651	162,344,556	160,239,494
March	101,938,685	141,880,080	161,616,735	167,296,701
April	121,522,971	147,146,443	150,156,054	
May	136,098,835	163,400,650	168,602,675	
June	124,604,875	182,757,015	159,309,133	
July	117,821,174	177,121,733	151,875,676	
August	120,607,677	171,380,353	176,610,625	
September	135,108,412	173,877,586	166,480,004	
October	120,681,624	180,246,216	151,018,747	
November	135,530,562	183,250,380	130,832,552	
December	137,157,860	173,878,134	134,483,482

Of the deposit in Central Gold Reserves $19,210,000 is in gold coin; the balance is in Dominion Notes.

The increase in the amount of call loans abroad, noted in the February statement, was continued in March, although to a lesser degree.

The following table shows the course of the principal loan accounts during recent years:—

March.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913 ..	$890,513,446	$ 38,277,672	$70,731,030	$109,227,927
1914 ..	823,490,422	53,279,411	69,088,240	145,218,223
1915 ..	769,138,883	41,745,737	68,245,261	101,938,685
1916 ..	770,139,526	52,705,827	81,747,512	141,889,989
1917 ..	843,054,466	83,551,225	76,478,708	161,616,735
1918 ..	886,995,222	102,317,679	74,257,877	167,296,701

The present amount of current loans in Canada closely approaches the figure of five years ago, and the call loans in Canada are the largest of any year with the exception of 1916. Current and call loans outside of Canada are at their highest level for the period.

COBALT ORE SHIPMENTS

The shipments of ore, in pounds, from Cobalt station for the week ending April 26th were as follows:—

Right-of-Way, 83,954; La Rose, 65,999; Tretheway, 86,659; Nipissing, 217,495; Buffalo Mine, 132,000. Total, 586,107 pounds, or 293 tons.

The total shipments since January 1st now amount to 6,697,493.8 pounds, or 3,348.7 tons.

Dominion Government---Mar., 1918

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to other banks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

PLANS TO TILL VACANT LANDS

Reports that large areas of vacant land were not being cultivated in the vicinity of Toronto this year, have resulted in action being taken by the Department of Agriculture, of the Province of Ontario, Mr. C. F. Bailey, deputy minister of the department, has made a personal survey of the country surrounding Toronto with a view to having all the land possible cultivated this season. However, it was found that much of the vacant land had been surveyed for real estate purposes, staked out and divided into small parcels, thus making it impossible to cultivate it in a big way. Then, too, the soil was not suitable in some instances.

One large tract of land, however, containing about 100 acres, was located by the department north of Armour Heights, just west of Yonge Street, and reaching nearly to Bathurst Street. It is owned by the Dovercourt Land Company, and is known as the Wallace Farm. Because of the lateness of the season immediate action was necessary if this land was to be used. Consequently, the department itself is undertaking to plant it with flax, the need for which is very great at this time to supply material for airplane wings. Two tractors have been at work on the property, and as much of the land as can be broken in the next two weeks will be planted.

Flax must be planted by May 10th or 15th at the latest. That leaves very little time for this large area to be put in shape for planting. An average crop of flax is about one and a-half tons to the acre. The object of the department in undertaking the work is twofold. The planting of this land will not only aid production, but it will test whether or not it is practicable to till these vacant lots.

APRIL FIRE LOSSES

Total Almost Double Losses for Previous Month—Highest for 1918

The Monetary Times' estimate of Canada's fire loss during April, 1918, is $3,240,187, compared with the March loss of $1,682,286, and $1,317,714 for April, 1917. The following is the estimate of the April losses:—

Fires exceeding $10,000	$2,692,500
Small fires reported	125,050
Estimate for unreported fires	422,637
Total	$3,240,187

The Monetary Times' record of the past three years and this year to date, shows the following monthly losses:—

	1915.	1916.	1917.	1918.
January	$ 1,249,886	$ 1,649,217	$ 1,918,660	$ 2,688,556
February ...	1,019,556	3,275,600	2,009,953	2,243,762
March	1,632,696	1,406,501	2,050,650	1,682,286
April	1,463,747	1,460,437	1,317,714	3,240,187
May	881,855	1,850,205	1,163,110	....
June	1,157,156	494,557	1,184,627	....
July	773,269	3,039,634	1,101,734	....
August	403,693	1,057,109	1,230,183	....
September ..	1,116,109	981,703	1,301,700	....
October	1,290,325	1,077,815	704,605	....
November ...	1,087,980	923,235	959,049	....
December ...	1,595,255	3,271,496	5,144,100	....
Totals ..	$13,671,527	$20,487,509	$20,086,085	$ 9,854,791

The fires reported in April, at which the losses amounted to $10,000, and over, were:—

Elgin, Man., April 1, the Elgin Hotel, $26,000.

Vancouver, B.C., April 1, the Orpheum Theatre, $15,000.

Toronto, Ont., April 2, slips and sheds of the Thor Iron Works, $300,000.

Toronto, Ont., April 3, plant of the Chemical Products Company, $40,000.

Hamilton, Ont., April 4, warehouse of the Eagle Spinning Mills Company, $110,000.

Toronto, Ont., April 6, plant of the Galena-Signal Oil Company, $130,000.

London, Ont., April 7, show case works and saw mill of the D. H. Giles Company, $13,000.

Winnipeg, Man., April 7, garage owned by A. E. Woods, $60,000.

Winnipeg, Man., April 7, the Arris Block, $12,500.

Ethelbert, Man., April 9, town destroyed, $100,000.

Sydney, N.S., April 10, store of A. N. McDonald.

Vermilion, Alta., April 11, business block, $500,000.

Hantsport, N.S., April 13, shipbuilding plant of Messrs. Fanquier and Porter, $16,000.

London, Ont., April 13, building of the Ontario Garage and Motor Sales Company, $12,000.

Corbyville, Ont., April 14, distillery plant and grain elevator, $100,000.

Toronto, Ont., April 15, plant of the Harris Abattoir Company, Limited, $1,000,000.

Sarnia, Ont.. April 16, mill of Lindsay-Thompson Flax Company, $10,000.

Montreal, Que., April 19, store of J. Eidlow, $25,000.

Fredericton, N.B., April 20, ten homes in Sandyville, $30,000.

Winnipeg, Man., April 20, premises of the Globe Bedding Company, $23,000.

Saanich, B.C., April 23, the Burnside Hotel, $10,000.

Chesley, Ont., April 26, munition plant of the Canada Beds, Limited.

St. Mary's, Ont., April 27, mill of the A. L. McCredie Company, $25,000.

Winnipeg, Man., April 27, the Parrish Building, $25,000.

Structures Damaged or Destroyed.

Among the structures damaged or destroyed last month were: Barns, 10; breweries, 3; church, 1; flax mills, 2; grain elevator, 1; hotels, 3; houses, 23; manufacturing plants, 7; munitions plant, 1; office buildings, 3; official buildings, 4; oil plants, 1; saw mills, 3; shipbuilding plants, 2; school, 1; stores, 7; theatre, 1; warehouses, 4. These figures do not include any estimates for the large fires which destroyed the town of Ethelbert, Man., and the business section of Vermilion, Alta.

Among the causes reported last month were: Defective chimneys, 4; defective wiring, 3; spontaneous combustion, 1; hot box in windmill, 1; overheated engine, 1; spark from passing railway engine, 1; explosion of resin pot, 1; rupture of gasoline tank on motor car, 1; overturned lantern, 1; explosion of coal oil stove, 1.

Total of Fatalities Drops.

The following is a list of fires at which fatalities occurred last month:—

Calgary, Alta., April 3	Trapped in burning house .	1
Mimico, Ont., April 6	Trapped in burning house .	2
Kingsville, Ont., April 10 ..	Trapped in burning house .	1
Toronto, Ont., April 11	Trapped in burning house .	2
Toronto, Ont., April 26	Explosion of coal oil stove .	1
	Total	7

The following table, compiled by *The Monetary Times*, shows deaths caused by fire during April, 1918, as compared with previous returns:—

	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.
January	27	27	14	26	3	10	21	28

Totals ..	317	203	236	175	142	531	207	156

EDMONTON FINANCES

Important changes have recently been introduced in the municipal taxation system of Edmonton. Until a short time ago, about one-half of the city's revenue was provided from the land taxes, that is, about $1,500,000. Tax arrears were continually growing. Efforts were made to secure loans against these arrears, and tax sales had to be resorted to.

A recent departure has been made from the single tax, and three other sources are to be used to a considerable extent. These are the business tax, the income tax, and the tax on building and improvements, all of which were sanctioned by the provincial legislature at its last session. Power of imposing additional forms of taxation were also granted to other Alberta cities, and the present year will probably see many experiments in the way of new forms of revenue in order to remedy the serious financial position in which many of the western cities find themselves.

The power of taxing businesses and buildings and improvements has been granted indefinitely to Edmonton, but the power of taxing incomes extends only for the years 1918 and 1919. The taxes are to come into force at once. As regards income tax, it is to be collected where possible at the source, and stringent measures are being prepared to secure as full a return as possible in all cases. The other taxes will be collected in the usual way.

These new sources of revenue are expected to make up for the failure of the land tax. Last year the total tax levy was levies. Present conditions have made it necessary to resort ing that the land tax for the current year yields about the same amount, the anticipated revenue from the new source, that is, $1,500,000, will make up the balance. It will be remembered that about a fortnight ago the city of Vancouver gave up the project of the single tax and provided for other levies. Present conditions have made it necessary to resort to any source of revenue which would appear to be productive, and this experience may be general among the cities which have endeavored to apply a single tax.

Building permits of the city of Chatham for April amounted to $16,435, or an increase over those for the same month last year. The permits for the first four months of the year also show an increase over those of the same period last year.

OUR UNITED STATES INVESTMENTS

It has been pointed out from time to time that the peculiar situation of the exchange market tends to discourage Canadian purchases of United States goods and to encourage sales of Canadian products in the United States. The high premium on New York funds, which passed above the 2 per cent. level in the latter part of April, makes it necessary for our importers to include the premium on exchange with the freight, customs and other costs incidental to bringing in the foreign goods; and the abnormal exchange rate would necessitate a higher selling price for the goods in the Canadian market or perhaps a diminution of the importer's profits. On the other hand, the exporter gets the benefit of the premium when he negotiates his draft on the United States consignee. In his case this means that he can pay higher prices in Canada for the produce exported, and perhaps in some instances he gets an additional or unexpected profit.

Market reports of the last week or two indicate that the high premium on United States money has induced a number of Canadian holders of United States securities to sell them and transfer the funds to Canada. The adverse exchange affects the international trading in securities in the same way as it affects the movement of commodities. Canadians who purchase United States stocks or bonds, remitting funds to New York to pay for them, are heavily penalized, while Canadian sellers of United States securities may receive a premium or bonus. As the bonus results from the depreciation of Canadian currency as compared with the United States, it is in that sense more apparent than real; but those who are taking advantage of the present opportunity doubtless consider that the currencies of the two countries may be placed practically upon an equality in the course of a few months by means of new credit arrangements entered into by London, Washington and Ottawa.

Notwithstanding the liquidation that has taken place in three and a half years of war, it is said that there is still a considerable amount of high-grade United States investment stocks held in the Dominion. Before the war, the business in Wall Street stocks transacted by Montreal and Toronto brokers probably exceeded the business done in Canadian stocks. Many Canadian capitalists and financiers were accustomed to carry considerable lines of United States stocks; also the wealthy Americans resident in Canada, and the highly paid executive officials of large United States branch industrials located in this country, naturally leaned towards United States securities in making their investments. The penalty involved in remitting Canadian money to New York, along with the very attractive yields obtainable on high-class Canadian bonds, would have a tendency to keep this investment money in the Dominion and to induce realization of United States securities for the purpose of buying here. Another point is that a United States investor sending money over here for investment in our municipal and provincial securities, because of the premium on New York funds, can get a higher yield on Canadian securities than the home investors obtain. A $10,000 cheque on New York sent over here to buy Canadian securities, with exchange around present rates, would probably count for $10,150 or $10,175 in the settlement; and the gain in exchange in case of a 5-year bond would represent an addition of more than ¼ per cent. per annum in the interest yield.

LIQUIDATING THE GRAIN CREDIT

The March return of circulation and specie issued by the Department of Finance shows for that month another substantial reduction in the amount of Dominion notes outstanding against deposits of approved securities under the Finance Act, 1914. These special issues of Dominion notes are understood to have been made in connection with the special grain credit of $100,000,000 granted by the banks to the British Government. The banks advanced the money to the agents of the Imperial Government, to enable them to pay cash for the grain delivered by Canadian farmers; then, as these loans had to be carried a certain time, the banks proceeded to lodge approved securities with the Receiver-General and he turned over to them in exchange newly issued Dominion notes—

thus enabling the bankers to continue discounting paper as usual for their ordinary customers.

The extra issues of notes commenced in September, 1917, with an output of $11,450,000. As the crop was marketed in October and November, they mounted rapidly —to $91,000,000 on November 30th and $98,270,000 on December 31st. That proved to be the high point. In January, 1918, the total fell to $92,820,000; in February, to $81,070,000; and now the March statement shows a further reduction to $76,665,000. Thus, in the three months the reduction has amounted to nearly $22,000,000, probably indicating that the banks have effected a reduction of a similar amount in their loans to the Wheat Export Company under the special grain credit. In this connection it is likely that the liquidation of the grain credit will proceed more rapidly with the opening of navigation on our interior waterways. Large shipments have been sent down the lakes in the latter part of April, and in the present month the movement will attain greater dimensions; so it is reasonable to expect that the returns for April and May will show considerable further liquidation.

In view of the contingency that the banks may be required to grant another special grain credit in the fall of 1918, it is important that the 1917 credit be cleared off. Although grain prices were very high last fall, the harvests were comparatively light in Western Canada. This year, owing to the greatly increased acreage and the improvement in general crop conditions, we may conceivably have the combination of a bumper yield and high prices. If so, it will take a considerably increased amount of currency and bank credits in other forms to finance the harvests. For example, a 300,000,000-bushel wheat crop at $2 per bushel would have a total value of $600,000,000; and if 200,000,000 bushels come forward to market between August and the end of December, that would necessitate the turnover of $400,000,000. It is to be expected that the financial arrangements for handling the 1918 crop will provide for cash payments to our banks as the shipments reach the seaboard. The amounts involved are so enormous that they would not be able to carry a large proportion of the prospective crop in the form of a steady loan without serious curtailment of ordinary accounts. Probably the arrangements made between Great Britain and the Washington government will include a plan whereby Britain may pay us with United States funds as soon as we put our grain on board ships at the Atlantic coast.

CONTROL OF PUBLIC EXPENDITURES

Hon. W. S. Fielding was quite correct in his contention, made during the recent debate in the House of Commons on the financing of Canadian Government Railways, that the expenditure of public moneys without the approval of the representatives of the people was a distinct menace to the principle of representative government. We are ready to admit that during war times it is quite proper to expend public funds without the sanction of parliament, providing the emergency is acute. On the other hand, it is dangerous practice to place in the hands of the administration power to make great outlays of public funds that have never been appropriated by parliament.

The Hon. Mr. Maclean, in this particular instance, offered the explanation that the funds to be expended were to come out of railway receipts; and that to include in the budget estimates amounting to a huge total on railway account, without also including in the estimates as counterbalancing items railway revenues, would give a wrong impression of the financial condition of the country. In this case, appropriations are to be made out of railway earnings, and manifestly—especially during these difficult days—such earnings cannot be accurately forecasted. Nevertheless, it strikes us as dangerous practice to permit public moneys to be appropriated and expended by any department merely by government sanction. And the case in point is not by any means an isolated one.

In recent years the practice has become all too common, both in provincial as well as in federal administration, to make large expenditures of the people's money that have never been appropriated for those specific purposes by the legislatures or by parliament. In the case of the provinces, receipts and expenditures have been growing at an accelerated rate; the expenditures increasing in response to popular demands for enlarged government service—for the building of roads and bridges, the construction of public buildings, and more ambitious undertakings. Some of the moneys expended have never been appropriated by parliament, but have been paid out under warrants. In all the provinces the major part of special war expenditures were incurred through the use of orders, or governor's warrants. This is not a violation of constitutional practice, to be sure; but it is a violation of a sound principle underlying both private and public finance—that the people who ultimately pay should control through their designated representatives.

Warrants are issued, under the approval of the governor-in-council, upon a report being made by a department that appropriations are exhausted and that additional funds are required for a particular undertaking; or the cabinet may authorize the issuing of warrants on the plea that such expenditures are "for the public good." Plainly, both these practices can be justified only when the need is imperatively urgent.

We are not disposed to find fault idly during these hard and difficult times; but the provincial and federal administrations will act most wisely in cutting to the lowest level all expenditures that have not received the direct sanction of the people's representatives. The control of taxation and public expenditures is of the essence of democratic government.

A DESERVING CAUSE

Although Canadians are at present faced with the certainty of much heavier demands on their resources, to meet the financial needs of the government, voluntary work should not on that account be neglected. Among the many organizations which have contributed real and useful assistance in the present exigency, none deserves more commendation than the Y.M.C.A. With the British troops in France and Belgium, in Italy, in the East, and in Africa, its representatives are to be found.

The Canadian branch, which is maintained by the National Council of the Y.M.C.A. for Canada, has been officially recognized by the Dominion government, and accompanies the Canadian troops both at home and abroad. The work is a work of service, in material, mental, moral, and religious well being. The closeness with which the Y.M.C.A. work is associated with the men in the actual fighting is illustrated by the fact that in the recent British retreat, the loss sustained by the Y.M.C.A. was about $500,000.

The organization is supported almost entirely by voluntary giving, and the expenses are necessarily large at the present time. A request for contributions is now being made. Public requests are not often resorted to by this organization, and it is to be hoped that the public will welcome this opportunity of assisting the commendable work.

Dominion Budget for 1918

Super Taxes to be Added to Incomes Over $6,000—New Taxes on Tea and Coffee will Touch all Households—Specified Non-essential Articles to be Taxed—$980,000,000 Required for the Current Fiscal Year—Canada's Financial Position is Solid Despite Nearly Four Years of War.

THE central feature of the new taxation proposals announced by Hon. A. K. Maclean, the acting minister of finance, in his budget speech on Tuesday, is the increase of the income tax. It has been generally expected that the exemption limit would be lowered; and the government's action in this respect conforms with that recently taken by the United States government in last year's revision of the United States law. Originally, the income tax, as applied in the neighboring country, affected married persons with incomes over $4,000 and unmarried persons with incomes over $2,000. Last fall the exemption limits were lowered to include married persons with incomes over $2,000 and unmarried persons with incomes over $1,000. As enacted last year, our own law applied to married persons with incomes of $3,000 and over and unmarried persons receiving $1,500; while the new law will reach all incomes in excess of $2,000 in case of married persons and in excess of $1,000 in case of unmarried.

New Taxation Affects Smaller Means.

This is quite an important development of our taxation policy, and it will bring within the purview of the tax commissioners a considerable number of people formerly not liable for direct Dominion taxation. In consideration of the fact that the increased cost of living presses hardly on the citizens receiving the smaller incomes, the rate of taxation on incomes thus newly brought into the scope of the act is fixed at 2 per cent., which is half the normal rate paid under the original law. In case of married taxpayers, the special exemption of $200 income for each child under sixteen years of age will occasion considerable relief. Thus, if there are three children under sixteen, the exemption limit is virtually $2,600 per year. Super-taxes are now to be added to the incomes in excess of $6,000. Last year's act fixed gradually rising rates upon incomes in excess of this figure, and now to those special rates is to be added a graded super-tax. The super-tax amounts to 5 per cent. in case of incomes from $6,000 to $10,000 and 10 per cent. for incomes from $10,000 to $100,000. Also, the regular taxes on incomes above $50,000 are revised upwards. It is calculated by the Toronto Globe that an income of $5,000 would yield $80 under the old tax and $100 under the new tax. A $7,000 income, which was formerly liable for $180 per year, will now be required to pay $250. The tax on a $10,000 income is increased from $360 to $580; that on a $15,000 income rises from $810 to $1,530; and on $30,000 the impost will jump from $2,460 to $4,680. With these additions our taxes on large incomes will be quite equal to the United States taxes, and in some cases the tax here will be heavier than in the United States. However, both the United States and Canadian taxes on incomes up to $150,000 per year are still below the British income tax. In the United Kingdom a relatively larger part of the burden is placed upon the moderate incomes.

Corporation Income Tax Raised.

The raising of the corporation income tax rate from 4 per cent. to 6 per cent. represents an increase of 50 per cent., and will mean a substantial addition to the burdens of the companies. As this corporation tax comes out of the funds available for dividends or extra distributions to stockholders, the owners of corporation stocks are not required to pay taxes a second time on the dividends received by them, excepting in cases where the stockholder is liable for supertaxes.

Our taxation proposals resemble those set forth in the recent British budget, in that they do not provide for further pressure upon the excess profits of industrial and mercantile concerns. Chancellor Law stated in his budget speech that an increase of the excess profits tax rate would not yield more revenue, and our government, too, apparently recognizes the inadvisability of repressing productive effort and repelling foreign capital by unduly exploiting the excess profits tax. There has been criticism of the existing tax because it laid no impost on businesses with less than $50,000 capital. A step in the direction of meeting such criticism is now taken through including companies having invested capital of $25,000 and over, whether incorporated or not. In case of these smaller companies, with capital from $25,000 to $50,000, the tax is to be 25 per cent. of all profits in excess of 10 per cent. on capital invested. Under the old tax the incorporated companies with capital of $50,000 and over are required to pay 25 per cent. of profits in excess of 7 per cent. on capital, 50 per cent. of profits in excess of 15 per cent. on capital, and 75 per cent. of profits in excess of 20 per cent. on capital.

Tea and Coffee to be Taxed.

The new taxes on tea and coffee will touch all households, and an impost of this kind bears especially upon the poorer classes. However, apart from these items, the budget gives evidence of having been framed with especial care to avoid laying heavier burdens on the poor—there are no general tariff changes to increase the cost of articles in general use throughout the country. Also it is to be noted that the tax of one per cent. on all transactions, forecasted recently by some of the Ottawa correspondents, did not materialize. This suggestion was not favorably received, and if the government had any intention of imposing it, such intention has apparently been abandoned. We follow in Britain's footsteps also in regard to placing special taxation on luxuries. The British budget contained an announcement of a new tax of two pence in the shilling on luxuries, along the same lines as levied in France. Our tax on certain specified non-essential articles—automobiles, jewelry, gramophones, piano and organ players and records—is to be 10 per cent. on the selling value, the tax to apply whether the goods are imported or manufactured here. The British tax on luxuries amounts to 16⅔ per cent., and presumably it will apply to a wider range of articles; the French rate apparently is the same as ours, namely, 10 per cent. Results of this tax will be watched with special interest. The government has been urged to apply such a tax as a means of enforcing economy upon the people; and in cases where this does not suffice to prevent expenditures on non-essential items, the tax is expected to divert to the national treasury a goodly share of the money which people insist upon expending in this way. As a result of the provision that the tax is to apply to the selling value of the items specified, it would appear that the dealers are likely to mention the tax specifically when rendering their bills. If this is the practice, the tax will be all the more effective in promoting economy.

The finance minister estimates that he will be required to raise during the current year, ending March, 1919, almost a billion dollars—$980,000,000, as given in the budget speech. Our own expenditures on the war, according to the estimate, will account for $425,000,000; loans to Great Britain in connection with British purchases of war supplies here will absorb $325,000,000; and the ordinary expenditure on account of consolidated fund is placed at $230,000,000. During the fiscal year just ended the war expenditure amounted to $345,000,000; the ordinary working expenses of government were $173,000,000; and the capital expenditure, $30,000,000. It will be observed that the war expenses are increased because of recent and prospective additions to the Canadian armies; and the ordinary expenses are increased largely because of the huge additions to our national debt, which additions involve an increased annual outlay for interest. The net debt is now $1,200,000,000, as against $336.000 000 at the beginning of the war.

Requirements for the Year 1918.

The $980,000,000 required for the current fiscal year will be provided as follows: First, there was available on April 1st, (the beginning of the year), a balance of $130,000,000, representing the unexpended balance of Victory Loan proceeds. Next the revenue is expected to reach $270.000.000—the revenue for the year just ended was $258.000.000; and in

view of the income tax payments falling due in June, and the new taxes imposed by the budget, the estimate of a $12,000,000 increase of revenue seems conservative. Then, Great Britain will advance $300,000,000 to cover cost of maintenance of Canadian troops overseas; and, finally, it will be necessary to borrow $280,000,000 here in Canada, or elsewhere if possible.

It will be seen that the revenue for the fiscal year ended March, 1918, was sufficient to provide for all ordinary and capital expenditure, with a balance or surplus of $55,000,000 to be applied on our war costs. Hon. Mr. Maclean also stated that up to the end of last March there was a net balance of $100,000,000 in Canada's favor in the open account transactions between Britain and Canada. That is to say, the amounts loaned by our government to Britain in connection with British purchases here, have exceeded by $100,000,000 the amounts loaned to us by England for maintenance of our troops overseas. As estimated in the budget for 1918-1919, there will this year be a further surplus of $25,000,000 accumulated by us in this connection—our loans to England are placed at $325,000,000, while the British loans to Canada will amount to $300,000,000.

Canada's Financial Position Sound.

The budget speech sets out clearly the fact that Canada's financial position is solid and strong despite 3½ years of war. The amounts raised by taxation are sufficient to ensure that the charges of the war debt will be fully covered; and the taxes, though onerous, are not so heavy as to prevent continued progress and development. Moreover, all classes of the people, convinced of their necessity, will accept them without complaint.

Canadian Budget Speech

National Debt Now $1,200,000,000—Almost Billion Dollars Required for Coming Year—Increases in Income Tax, Excise Taxes, and Customs Duties on Luxuries.

THE revenue of Canada for the fiscal year ended March 31st was $256,000,000, or $26,000,000 more than the revenue for the preceding year. Expenditure on revenue account was $173,000,000, and on capital account $30,000,000. This left a surplus of $55,000,000 to be applied to war expenditure. The war expenditure for the year was $345,000,000, and the total war expenditure so far was $878,000,000. The national debt is now $1,200,000,000, as compared with $336,000,000 before the war.

It is estimated that $980,000,000 will be required for the current fiscal year. This includes $230,000,000 for the civil budget, $425,000,000 for war expenditure, and $325,000,000 for financing, in part, British war orders in Canada. There remains unexpended $130,000,000 of the Victory Loan, and revenue of $270,000,000 is counted on. The cost of maintenance of Canadian troops overseas is to be financed by Britain to the extent of $300,000,000, and for the balance of $280,000,000, loans will be necessary.

Important new taxation was outlined in the budget speech. The question of protection was not touched on, the tariff changes taking the form of increased imposts on luxuries. The duty on tea is to be ten cents per pound, and an excise duty of ten cents per pound on all stocks now in dealers' hands is also to be levied. British preferential duty on green coffee and chicory is made five cents per pound, and intermediate rate seven cents, as compared with two and one-quarter and three cents formerly. Temperance drinks which require malt, rice or corn in their manufacture will now have to pay a customs duty of 40 per cent. ad valorem instead of 25 per cent. ad valorem. The customs duty on moving picture films is made five cents per foot.

The excise on tobacco, cigars and cigarettes manufactured from foreign leaf is to be doubled, and five cents per pound imposed on home-grown raw leaf. There is also to be levied one cent per hundred on matches and eight cents per package of playing cards. Taxes on sleeping-car berths are made 10 per cent. of the price paid for each berth, with a minimum charge of 25 cents; on parlor car seats the tax is increased from five to ten cents. There is also to be a special war excise of 10 per cent. on the selling value of automobiles, jewellery, gramophones, piano and organ players and records when imported into or manufactured in Canada.

Increases in Income Tax.

The following changes are outlined in the income tax: tured from foreign leaf is to be doubled, and five cents per sons in excess of $1,000, and of married persons in excess of $2,000; the minimums were formerly $1,500 and $3,000, respectively. The tax on the smaller incomes is, however, to be only 2 per cent. per annum, and there is to be a special exemption of $200 for each child under sixteen years of age. Taxes on higher incomes are to be raised still further, a super tax of 5 per cent. being now to apply on incomes from $6,000 to $10,000, and of 10 per cent. on incomes from $10,000 to $100,000, with increases for larger incomes.

The corporation income tax is raised from 4 per cent. to 6 per cent. The business profits tax of the last three years is renewed and made applicable to companies having an invested capital of $25,000 or upwards, compared with the former minimum of $50,000. It is to be applicable to all companies, whether incorporated or not.

Economy Required.

The Dominion budget speech was delivered on Tuesday, the 30th April, in the space of about an hour, by the Hon. A. K. Maclean, acting minister of finance. Hon. W. T. White, minister of finance, is absent in New York.

Mr. Maclean dealt briefly with the present financial position and the requirements for the coming year. The details are summarized above. The necessity of economy in imports was emphasized, in order to remedy the adverse trade balance between Canada and some countries. "We must learn," he said, "to dispense with luxuries, and possibly with some of the things which we have hitherto regarded as necessities. In order to reduce this class of imports it may be necessary later on to control the same by the licensing system."

Regarding further loans, Mr. Maclean said: "If we are to continue our part in the war and maintain our overseas trade at its present dimensions, the people of Canada must loan to the government the money to accomplish that end." Another loan, it was intimated, is already being arranged.

From the figures given by Mr. Maclean in regard to the balancing up of our war account with Great Britain, it is evident that the United States will be called upon to play a very large part in furnishing credits for Great Britain on Canadian account. Although it is estimated that our exports to Great Britain this year will total approximately eight hundred millions, the budget figures set down only three hundred and twenty-five millions as the amount which Canada would have to advance for financing the British purchases. On the other hand, Great Britain is relieving Canada of the necessity for making cash payments for the maintenance of Canadian troops overseas. Mr. Maclean said that the government was relying on this belief to the extent of three hundred million dollars, thus almost balancing up our credits advanced here to Great Britain.

As had been generally expected, Mr. Maclean kept clear of all tariff controversy. The duty on agricultural implements was not even mentioned by him. The only tariff changes were in the nature of direct taxation not affecting in any way the protective principle.

Coming to trade, the minister said that our exports as the war progressed are showing a greater increase over our imports. In 1913 imports exceeded exports by nearly $300,000,000. This condition has been so completely reversed that the exports exceed the imports by about $625,000,000, and our total trade, which passed the billion mark in 1913, exceeded

the 2½ billion mark in 1918. The increase, he said, is largely attributable to war conditions. Last year our exports to Great Britain were about $850,000,000, while our imports amounted to $81,000,000. Our exports to the United States reached the sum of $440,000,000, while our imports amounted to $790,000,000.

Mr. Maclean informed the House that in the past three years immigration had reached a total of 202,985, despite the war. Of this total number, 169,640 came from the United States and 20,124 from the British Isles. An important factor in connection with this immigration is that it is very largely composed of experienced farmers.

American Exchange.

Referring to the question of exchange, Mr. Maclean said that this had become an acute problem in Canada. The high rate which has prevailed on remittances of funds to the United States has imposed a severe tax upon importers and the public, and if it continues must diminish imports or add to their cost. Were we able to sell securities in the United States, the rates of exchange might have been adjusted or normalized, but Canadians were not permitted to do so. The government did not require during the present year to borrow in the United States, even if it were permitted to do so, and, consequently, by such an operation it was not convenient or practical to correct the exchange situation.

"To redress the adverse rate of exchange with the United States," said Mr. Maclean, "we must lessen our imports from that country, or the United States must buy more from us, or we must sell securities across the border to the extent of a very substantial proportion of our adverse trade balance.

"The government has been very diligent in its endeavors to bring about such financial arrangements with the governments of Great Britain and the United States as would materially relieve our people of the burden of the present high rates of exchange. I hope that very shortly we shall be in a position to announce the successful conclusion of negotiations which have in view this end. In connection with the exchange problem, it might be of interest to state that for the first three months of this calendar year our imports from the United States have decreased below that of the corresponding period of last year by over $36,000,000, while our exports have increased in the same comparative period by about $20,000,000."

Balances of Trade.

In considering more in detail the matter of financing the war and trade, the minister said that there is a very direct connection between our domestic loans and the financing of our war operations, and also with our productions and our overseas export trade. All are acquainted with the fact, he said, that the war has disturbed the natural currents of trade, rendering impossible the settlement of international trading accounts in the normal manner. Prior to the war Canada had a favorable trade balance with Great Britain, but this had changed. Circumstances had compelled Great Britain to purchase heavily of war supplies and foodstuffs on this side of the Atlantic. Great Britain has become chiefly a purchasing nation, and is no longer a loaning but a borrowing country. In 1917-18 we had a favorable merchandise trade with Great Britain of about $790,000,000, while with the United States it was unfavorable to the extent of $350,000,000. Normally, we would settle our unfavorable United States trade balances with the moneys receivable from Great Britain for her liberal purchases of our high-priced commodities. However, owing to the enormous purchases Great Britain was obliged to make for herself and some of her Allies, and so great has been the drain upon her liquid resources in the first three years of the war, that in July last she was obliged to secure loans or dollar credits for her Canadian purchases, otherwise she would be obliged to practically cease purchasing here. In that event commercial disaster would have overtaken Canada and we would have had difficulty in financing our war expenditures.

Opposition's Criticism.

Mr. A. R. MacMaster, K.C., of Brome, who followed as the chief financial critic of the Opposition, had no serious criticism to offer of the new taxation proposals, but vigorously contended that the most serious omission from the budget was the failure to consider a reduction of the duties on agricultural implements. The loss in revenue would be only two million dollars, which was not worth considering in view of the advantages which would accrue from increased agricultural production and a stimulation of farm settlement. Mr. MacMaster contended that a real, rigid economy on the part of the government would result in reducing in war time the expenditure for the ordinary purposes of administration to one hundred millions, the figure of the old Laurier days, instead of one hundred and thirty-three millions, as it was at present. Commenting on the enormous fixed expenditure to which Canada was now committed, he noted that the annual taxation after the war could not be less than two hundred millions per year, or twenty-five dollars per capita. He urged that any further measure of direct taxation should be placed upon the shoulders of the rich, who benefited from the continued policy of high protection, which the Liberals in the government still seemed to be standing for.

The debate on the budget is likely to last for the balance of the week at least, some thirty members having signified their intention of placing their views on Hansard.

BANK CLEARINGS

The following are the bank clearings for the weeks ended April 25th, 1918, and April 26th, 1917, respectively, with changes:—

	Week ended Apr. 25, '18.	Week ended Apr. 26, '17.		Changes.

Totals	$248,359,646	$284,652,436	—	$36,292,790

The Toronto bank clearings for April are $276,705,355. compared with $263,225,159 for April, 1917, and $186,270,192 for April, 1916.

The Toronto bank clearings for the current week are $68,684,677, compared with $63,528,236 for the same week in 1917, and $55,697,519 in 1916.

CARBORUNDUM

At the recent meeting of the Niagara Falls Board of Trade, a paper on Carborundum was read by Mr. Francis R. Bowman. He described the discovery of the substance and its importance as a manufacture. The first plant of the Carborundum Company was located at Monongahela, Pa. During 1893, its first year of operation, the total output was 15,000 pounds. In 1895 it was decided to remove to Niagara Falls, on account of the possibilities of unlimited electric power to be secured there. A contract was accordingly made with the Niagara Falls Power Company for 1,000 horse-power. He also pointed out how the confidence of the promoters has been justified, as the present plant covers 19 acres of floor space, is equipped to handle 25,000 horse-power, and upwards of 1,500,000 pounds of carborundum are made each month.

The annual general meeting of the shareholders of the Toronto Paper Manufacturing Company, Limited, will be held Friday, May 17th.

GERMANY'S INDUSTRIAL EFFORTS

Kaiser Wilhelm Society—Union of Technical and Scientific Societies—Special Efforts in Iron and Steel Industry

The warring nations all feel the desirability of building up a foreign trade after the war, and recognize the fact that competition will be keener than ever before. Germany, however, is still in the lead in government promotion of industry, and this policy has recently received further extensions.

The other nations have a number of institutions for carrying on industrial and scientific research; Germany not only possesses a multitude of these organizations, but has also a society for founding them. This is the Kaiser Wilhelm Society, founded in January, 1911, by the initiative of Kaiser Wilhelm II., for establishing and maintaining in a scientific manner independent institutes for research in the sphere of physical science. This society has assisted in the foundation of the institute for chemistry; institute for experimental therapy; institute for coal research; institute for labor physiology; and in 1914 it projected the biological institute and the institute for aerodynamics and hydrodynamics. Half of the members are elected, and the other half nominated by the Emperor and the committee of management. The election by the senate and confirmation by the Emperor carries with it the obligation of a contribution of $5,000 with an annual contribution of $250.

Prior to the war, one of the principal aims of this institution, and its off-shoots, was to promote trade abroad. War conditions, and more particularly the blockade of the sea, have since remodelled the foundations of German economic life, and prevented the pursuit of this policy. Attention has been forced towards economic solidarity, the production of her own raw materials and food, the utilization of waste materials and the production of substitutes. It must now be admitted that her success has been beyond all our expectations, and quite contrary to many of our predictions. Whether this is because of, or in spite of, government encouragement, is another question.

A War Science Trust.

Statements of Germany's recent activities along this line have been prepared by Sir Robert Hadfield. A "Kaiser Wilhelm Trust for Promotion of War Science" has been founded. The aim of the trust is to further the development of scientific and technical aids to warfare, by uniting the scientific and the military forces of the country for work together. The scientific work is to be divided among special committees devoted to the various branches, such as chemical war materials, metals, aeronautics, etc.

Present efforts are not, however, confined to the science of war; a broader foundation is being laid for the promotion of industry in general. A "German Union of Technical and Scientific Societies" has been organized. Just as the War Science Trust aims to co-ordinate scientific activities with the war, so does this union aim at a closer co-operation between the scientific brains of the nation, and its industries. First of all, a number of technical societies, devoted to different industries, united for closer co-operation, early in 1917. In April of that year it was stated in an article in a German newspaper that the managing committee of the union had decided to create an intermediate agency between the technical world and scientific institutions for the carrying out of scientific and technical research work, so that industry not equipped for experimental work, especially smaller concerns, might be afforded an opportunity of having problems solved through the aid of the union.

Technical Union.

The first general meeting of the union was held in November, and the proceedings are reported as follows:—

"The 'German Union of Technical Scientific Societies,' which has recently been formed by the combining of thirteen associations and unions, held its first general meeting this morning on the premises of the Association of German Engineers in Sommerstrasse, where the chairman, Privy Councillor Busley, after welcoming those present—among whom the Imperial government offices, the federal council and legislative bodies were represented by members—explained the purpose and aims of the union.

"Herr Busley said that their object was to establish a balance between science and practice. Many a technical task could not be carried through without participation and collaboration of several branches of science; the metallurgist required the co-operation of the technician, the architect that of the engineer, etc. An influence was also to be exerted on technical instruction and education, and towards ensuring that the academically trained technician should be admitted to all administrative departments of the federal states. The technical world ought to be represented, more than was hitherto the case, in the legislative bodies. The union had also applied to the authorities with a view to being consulted in the preparatory work of drafting regulations or enactments. Unfortunately, hitherto, the Imperial treasury alone had availed itself of their advice, in the preparatory work for the taxation of coal and sources of energy. Finally, the speaker stated that a desire had been expressed that an Austrian and Hungarian section should be attached to the union, as to which resolutions were still to be passed.

"Professor Dr. Wiedenfeld (Halle) then spoke on 'Economics and Technics During and After the War.' The speaker showed, in a very exhaustive manner, how, in former days, Germany could manage well with her own production, how subsequently she became more and more dependent on foreign countries owing to the increase of her population, and was then subjected, by the blockade of the sea, to the necessity of remodelling all the foundations of her economic life, of producing from her own resources, raw materials and food. Technical science could only meet these new requirements by fundamentally disregarding the question of cost price, which formerly, in competing with other countries, was necessarily one of the foremost considerations. Disregarding all considerations as to the possibilities of the market and the risk involved, substitutes were produced by calling in the aid of new modes of production and devoting thereto all human powers. Although not all of these new conditions and products can be carried over into times of peace, nevertheless the old economic conditions cannot be reverted to.

Methods Adopted.

"What has been will never return, nor would this be even desirable. He said that technical science had been endeavoring to come to the aid of economic life in a threefold manner.

"1. By procuring the raw materials formerly obtained from abroad partly by the re-establishment of industries which had become unremunerative (production of manganese, increase of the production of iron, production of sulphur, intensification of agriculture).

"2. By promoting the technical tendency, already existing in pre-war times, towards increased utilization of waste products. The term "non-utilisable substance" has been eliminated by the war. The speaker emphasized in this respect obtaining lubricants from coal tar, and supplying clothing requirements by utilization of waste material.

"3. By producing substitutes, such as, for instance, nitrogen from the air, and the production of substances by synthetic processes, where the natural way is no longer available, as, for instance, the cattle food produced from straw.

"The speaker recalled a dictum of His Excellency Professor Fischer: 'I cannot imagine any substance for which a substitute could not somehow be found.' In the speaker's opinion too much regard had been paid, during the early part of the war, to the quality of production, which, however, became impossible with the continued duration of the war. The speaker also found fault with the multiplicity of government authorities controlling construction, which had already manifested itself in peace times to the prejudice of German production. With a view to the projects, the speaker demanded that even after the war we ought to aim at a reduced utilization of certain raw materials. Production would assume an unfavorable aspect in certain departments owing to the high expense for industrial war installations. In this respect amortization during the war of these expenses for war installations would be necessary. Further, wherever materials produced wholesale are in question, the speaker would be in favor of monopolies, though not necessarily state monopolies. He held that it would only be by strictly regulated syndicates that steadiness in the movement of prices could be established, and an assurance of remunerativeness, favorable to the display of technical science, and consequent brisk investment of capital, obtained. The speaker concluded by attempting to lay down guiding principles for the collaboration of technical science and enterprise, which cannot do without each other.

"Finally Dr. Taaks, Dr. Eng., spoke on 'Technical Academic Study After the War.'"

AMERICAN IMMIGRATION TO CANADIAN WEST

Benefits United States as Well as Canada — Greater Production Facilitated

Speaking before the Women's Advertising Club of Chicago, Robert J. C. Stead, of Calgary, Alberta, advertising manager of the Department of Colonization and Development of the Canadian Pacific Railway, defended the greatly increased immigration of well-to-do American farmers into western Canada, by showing how the development of Canadian lands and resources was feeding the market for American goods.

"We actually go after the American farmers; we want them for settlers," he said, "but the advantage is not all ours. The Dominion of Canada is your second best customer. We buy more goods from you than does all South America. When an American comes to Canada, he continues to buy American goods and in all probability he will be able to buy more than before.

Where Land is Low Priced.

"A man had some 80 acres of land in Iowa. He sold these 80 acres and with this money went up to Saskatchewan where he bought 640 acres and had $3,000 left out of the price of his Iowa farm. Your government is advertising that 'Food will win the war.' Now this man will not only be able to produce eight times as much food for the Allies, but he will have eight times as much money to spend, and his demand for American made goods of all kinds is increased accordingly. At the same time the Iowa farm will still be producing, for the man who bought it is farming it. You have simply increased the world's food resources and you have a good customer who will continue to buy from you and will come down here to spend his winters among you and try to induce you to come up. The circle is fairly complete.

Vast Unsettled Territory.

"The province of Alberta alone has a territory nearly equal to the five states of Illinois, Iowa, Wisconsin, Indiana and Missouri. We have every extreme of scenery from the rolling plain to the wildest mountains, and from treeless prairies of southern Alberta to the dense forests in the north. We have in the province of Alberta a timber reserve of 13,000,000 acres—one of the largest forest reserves on the continent. We have considerable coal. The Dominion government has estimated the coal resources at about one thousand billion tons. Not many prairie regions have that much coal. It is not uncommon to see farmers hauling their coal from the nearest river bank, where they have only to dig it from the outcrop. Where local miners have put up shanties and mine coal for sale they do a thriving business, selling at $3 a load.

Natural Gas for Fuel.

"We have very extensive reserves of natural gas. Medicine Hat, where the weather is made, is the centre of the region. They have been using it now for fuel for 20 years and the pressure is just as great now as it was 20 years ago. It is supplied there for manufacturing purposes at as low as two cents a thousand feet. In my own city of Calgary we use natural gas for fuel, piping it 180 miles.

"It is furnished at 30 cents a thousand feet, and is supplied for manufacturing purposes at 15 cents a thousand feet. You can stand on the hills overlooking the city any day and see almost no smoke rising from it.

Some Comparisons.

"There are 105,000,000 acres in the province that can be cropped without requiring any reclamation work. That is, if you were to take the entire wheat crop of the United States from Maine to California, from Florida to Washington—the entire oat crop, the entire barley crop, the entire tobacco crop, and rice crop, and the potato crop of the whole United States—and if it were possible to transplant them, acre for acre, you might plant them all in Alberta.

"There is one thing I hope to see come out of this war—there are many things, of course—but I want to see this, too, and that is that the United States and Canada should each appoint a commission to get together and agree upon some of the facts that shall be taught in the schools. The time is past when we must minimize the facts and deal in prejudice. We should recognize our common obligation to a fair interpretation of the historical relations of the two countries."

SOME LIFE INSURANCE QUESTIONS

Surplus, Premium Rates, Safety, Amortization, Interest Rate, Mortality, Mutual Companies

Q.—What would you consider the most important source of surplus to a life insurance company?

A.—There are three main sources of surplus to a life insurance company, viz., savings in expenditure, gain from light mortality, and excess interest earnings. The interest rate is, without doubt, the most potent of these three sources. In the early years of a policy's duration the profit from loading for expenses and from mortality lighter than the expected will be greater than that derived from a high interest rate. But as the duration advances and the reserve increases the profit from the two former sources becomes constantly less, while that from interest becomes constantly greater. Where the interest rate is very high, the time arrives when the profit therefrom might almost be said to dwarf that from any other source.

To give yourself somewhat of an idea as to the importance of a high interest rate to any company, accumulate a $100 premium for twenty years at 6 per cent., then at 4 per cent. and contrast your results.

Premium Rates.

Q.—Is there much difference in the premium rates charged by life insurance companies? Is it advisable to insure with those companies charging the lowest rates?

A.—Paradoxical as it may seem, the dearer plans are sometimes the cheaper, and similarly, those companies which charge a slightly higher scale of premiums may yet, by more liberal surplus returns, make the net cost of insurance much lower than those companies charging the lowest rates at the outset. Occasionally, you will find the poorest companies issuing policies at very low rates, they having no other favorable features sufficient to recommend their policies to the insuring public. For example, take some of the assessment and fraternal societies which have been charging rates absolutely inadequate to cover the risk assured. As soon as the initial favorable selections has worn off and their mortality reached a normal point, they find it increasingly difficult to meet claims as they fall due, and the long list of failures in the annals of fraternal insurance bears striking witness to the folly of charging inadequate premiums and neglecting to retain a proper reserve.

The rates of Canadian companies on participating business are, as a rule, lower than those of the United States. At the same time, their actual results are, as a rule, better, and as between the average Canadian and the average United States company, we believe the former should have the preference. Most of the Canadian companies charge the same premium rates, those drawn up by the Association of life Managers. A few of the companies, however, refused to adopt this standard and have placed their rates on a basis in many cases only a few cents lower than those in common use.

The gist of the above arguments is that your selection of a company should not be made on the consideration of the office premium charged, but on the probable net cost of the insurance as shown by the company's actual results in the past and future rate of progress.

Any difference there may be in rates is usually inconsequential, and, as we said before, some of the weakest companies employ the lowest rates, this being, in their case, an acknowledgment of such weakness. Base your judgment of a company's merits on its earning power, present and potential, having regard, in particular, to such important factors as interest, expense and mortality ratios.

Of course, in respect to a non-participating policy, select that company that has the lowest rates, provided the company is well established. In our opinion, however, a participating policy in a good company will in the end prove much cheaper than a non-particpiating one.

Strength of Companies.

Q.—Why do life companies claim to afford policyholders such absolute safety? One sees advertisements, "Strong as Gibraltar," "Safe as the Bank of England," etc.

A.—While some of these claims may seem far-fetched, we can assure you that in the case of a well-established life insurance office the possibility of failure has reached a vanishing point. As De Morgan has said, "There is nothing in the commercial world which approaches, even remotely, the security of a well-established life insurance office." This

When Appointing an Executor Consider This Comparison

Comparing the competence of an individual with that of an administrative organization, does it not seem reasonable to assume that a Corporate Executor, such as the Toronto General Trusts Corporation, with experts in every Department, should be preferred as Executor of your Will?

We would gladly discuss the matter with you or mail you booklet on request.

AN ADDITIONAL SAFEGUARD

A client who holds one of our Guaranteed Trust Investment receipts takes no chance of payment being made to anyone but himself. Payments on this plan are made by cheque, and only to the owner of the receipt or his order.

This is a subsidiary point but noteworthy to anyone comparing the safeguards of this plan with those of other investments.

Write for Booklet "Guaranteed Trust Investments"

National Trust Company Limited

Capital Paid-up, $1,500,000 Reserve, $1,500,000

18-22 KING STREET EAST, TORONTO,

statement is explained from a consideration of the nature of the life insurance business. It is based on the law of averages, on the mortality of a vast group of lives spread over a vast area of country. While nothing is more uncertain than the duration of life of any given individual, yet statistics have shown that the expected mortality of a large number of lives can be gauged with very close approximation. An insurance company, unlike a bank, is in no danger of having any sudden and violent demands upon its resources, no "runs" on the bank, so to speak. Its reserves, required by the government, are sufficient to offset the risk under each policy held by it; its investments are under sensible government restrictions; its expenses, if the company is well-established, are proportionally light; its premiums are always based on conservative and adequate assumptions; and its safety is attested from the fact that there has never yet been a failure of a well-established old-line company.

"Amortization" of Values.

Q.—Will you be good enough to explain briefly the meaning of the term "amortized value," or "amortized book value," which occurs so frequently in recent years in the annual statements of life insurance companies?

A.—Most life insurance companies, perhaps all, include government, municipal and corporate bonds among their investments. The price at which bonds or securities of any kind can be purchased vary constantly, according to prevailing financial conditions. This is true of real estate mortgages as well as of government, municipal or corporate bonds. In a time of great financial stringency the best mortgages, as well as bonds of the highest class, could be sold only at a discount, if at all. The life insurance companies, however, buy securities of any kind for the sole purpose of permanent investment, with the idea of holding them until maturity for the sake of the income they will yield. Their cost, their value at maturity and the income to be derived from them are all fixed, and, as no occasion can arise requiring their sale, it is immaterial to the company what their so-called "market value" may be at any time. The practice, therefore, of listing such assets at their supposed value, indicated by the market quotations at the close of the year, as formerly required by the New York law, and still the rule in some States, is necessarily misleading. Such figures fluctuate constantly, and rarely, if ever, represent the real value of the investment. Where this method is in use, precisely the same securities may be valued one year above and another year below par, even though their real value as investments may have never changed. In buying bonds in the market a life insurance company must sometimes pay more than par value, while able in other cases to buy them at a discount, depending in each instance upon the rate of interest called for, the time to run, and prevailing financial conditions. A high-class bond of $1,000, bearing 4½ per cent. and running twenty years, would ordinarily cost more than par, say, for example, $1,050. As the bond will be worth only par at maturity, the transaction will involve an apparent loss of $50. It would not be proper to charge the whole of that loss in the first year, nor to defer the entry until maturity. Accordingly, the amount is "averaged" or scientifically apportioned throughout the period, and the proper sum is deducted each year from the book value in such manner as to bring the latter to exactly par at maturity. The balance thus ascertained is entered as the "amortized" book value. In like manner a bond may be bought in some instances at less than par, say, $980. As it will be worth $1,000 at maturity, there will be an apparent profit of $20. This gain, however, does not rightly accrue in the first year, nor in the last. It is, therefore, apportioned in some manner as before throughout the period, and the proper amount is added each year so as to bring the amortized book value to exactly par when the bond becomes due and payable.

Interest Rate.

Q.—Kindly explain to me the formula used by the life companies in arriving at the interest rate earned on the invested funds.

A.—The correct formula for finding the interest rate earned on a company's funds—and that employed by the government—may be denoted by $\frac{2\,I}{A\ B\text{-}I}$, where

I denotes the interest income for the year, increased by the interest due and accrued in the year over the interest due and accrued in the preceding year.

A denotes the net ledger assets at beginning of the year.

B denotes the net ledger assets at the end of the year.

Other formulas are sometimes employed, but they are incorrect, and do not take into account the proper adjustments, e.g.: The Chronicle has used the formula $\frac{2\,I}{A+B}$, by which the interest earned in the year is added to the principal as earned instead of being left in the interest account until the end of the year. They thus obtained what is called the force of interest instead of the rate of interest. Probably the above explanation would be clearer to you if we worked out the rate from some hypothetical figures:—

$ 191,965.07	Interest income, 1917.
109,502.58	Interest due and accrued, 1917.
$ 301,467.65	
84,334.41	Interest due and accrued, 1916.
$ 217,133.24	I (the interest earned in 1917).
$2,680,827.17	Ledger assets, 1916.
54,604.16	Overdraft.
$2,626,223.02	A (the net ledger assets, 1916).
$3,074,831.84	Ledger assets, 1917.
129.523.54	Overdraft.
$2.945,308.30	B (the net ledger assets, 1917).
$2,626,223.02	A.
2,945,308.30	B.
$5,571,531.52	A B.
217,133.24	I.
$5,354,398.08	A B-I.

$$\text{Interest rate} = \frac{21}{A\ B\text{-}I} = \frac{\$\ 434,266.48}{\$5,354,398.08} = 8.11 \text{ per cent.}$$

What ratio do you consider as the most important in showing the actual or relative standing of a life insurance company?

We believe that the rate of surplus earned on ledger assets is the most important single comparison that can be made, as it serves to focalize all other important ratios on the supreme point of earning power. This ratio, like others, however, should not be used indiscriminately, but many other factors should be taken into account, e.g., size of company, rate of progress, method of surplus distribution, etc.

Mortality.

Q.—What is meant by saying a life company has had an actual mortality of a certain percentage of expected?

A.—Life assurance premiums are based upon a certain average rate of mortality, deduced from the actual experience of a large number of life assurance companies extending over many years. A mortality table thus framed is known as a Standard Table of Mortality, and there are several in existence. One of the most recent and reliable is the OM table, deduced from the experiences for a series of years of a large number of English and Scotch companies, and this is the table usually employed by Canadian companies. It is customary for life assurance companies to compare their actual mortality experienced each year with the expected according to some standard table. Owing to the careful selection of risks exercised by most of our companies it is found that almost invariably they show an actual mortality considerably lighter than that expected by the standard table employed. Large gains are the natural consequence, and policyholders reap appreciable benefit when their company can show a saving in mortality of a goodly percentage of that expected.

Mutual Companies.

Q.—I am being canvassed by two agents for life insurance. One of these represents a mutual company, and claims particular merit on that account. Do you think this should influence my decision?

A.—Candidly, we do not, and for the following reasons: There are three classes of life assurance companies doing business to-day—stock, mutual and mixed companies—and each system is heralded by its adherents as the "best." Naturally, every system has its advantages, or it would not be in use, but it is just as natural that one system should

present greater advantages to the policyholder than the others.

A stock company is a purely business enterprise, conducted by stockholders for their own benefit. A mutual company is a body of men joined together on equal terms to provide mutual protection. If there is a profit, these men (the policyholders) share therein; if a loss, they have to make good the deficiency.

A mixed company is one organized by stockholders, but in which they only receive a certain proportion of the profits, the balance belonging to the policyholders. To this class belong most of the Canadian companies, and such a company is, in our opinion, that "happy medium" which will produce the best results for policyholders.

A capital stock to a life assurance company is like ballast to a ship—both act as "steadiers." In life assurance it secures what is most essential to the success of any business or enterprise—continuous management. The shareholders, with their large financial interests at stake, have the greatest desire to achieve success, and will take the greatest precaution to see that the management is good, sound and progressive. On the other hand, while under the mutual system, each policyholder is supposed to have a voice in the management of the company's affairs, it has been found that in practice this is an absolute impossibility, and that a mere handful, outside of the officers of the company, ever attend its meetings or vote on its affairs.

Capital stock, moreover, forms an additional reserve fund for the security of policyholders, a security obtained at very small cost to them, as the shareholders receive a minimum of the profits. Also, the fact that the small percentage of profits paid to shareholders is dependent on those paid to policyholders, naturally makes them, if only for the sake of self-interest, zealous in the interest of their policyholders.

When a mutual company is well-established, however, there should not be much to choose between it and the average "mixed" company. Actual results should be your guide, not an involved discussion of the stock and mutual feature.

GRAND TRUNK STAFF CHANGES

The following appointments have been made in the Grand Trunk Railway Company, in effect May 1st:—Mr. H. E. Whittenberger, general superintendent, western lines, with headquarters at Chicago; Mr. C. G. Bowker, general superintendent, Ontario lines, with headquarters at Toronto; and Mr. W. R. Davidson, general superintendent, eastern lines, with headquarters at Montreal.

Mr. Whittenberger entered the railway service as a brakeman, and has been general superintendent of Ontario lines since 1913. Mr. Bowker has been in the railroad service for thirty years, starting his career as a telegraph operator, and Mr. Davidson commenced with the Grand Trunk as a trainmaster.

CROP PROSPECTS IN THE WEST

Ample evidence that the farmers in the great grain growing areas between the Great Lakes and the Rockies are responding whole-heartedly to the government's appeal for increased production, is contained in a detailed report of farming operations in Manitoba, Saskatchewan and Alberta received at the head office of the Canadian Northern the other day.

It is pointed out that the late fall in 1917 and the early spring of this year have compensated largely for any shortage in farm labor at this critical time. Recent reports to the Canadian Northern indicated that the new breaking along its lines would be between three-quarters of a million and a million acres, and that sufficient fall ploughing had been done to facilitate early operations this year. The report just in from 235 points, shows that up to the week ending April 17th, there was pronounced activity throughout all districts served by the lines of the Canadian Northern in the west. The condition of the ground was given as good, there being not a single complaint in respect to the state of the soil.

The indications are, from this report, that there will be a substantial increase in the acreage sown to wheat along the lines of the Canadian Northern Railway in the three prairie provinces. Some estimate this increase as high as 25 per cent., and the lowest percentage given is 10 per cent. Generally, it would appear that the operations for the crop of 1918 have commenced auspiciously.

EXPANDING BUSINESS ACTIVITY OF JAPAN.

No nation at the present time seems to be more keenly alive to the trade opportunities than is Japan, and probably no other nation is in as favorable a condition to promote it. Not only has her home market been utilized, but efforts are being made to introduce lines of goods specially suited for foreign trade, such as scientific instruments, jewelry, etc.

In line with this action is the plan to extend Japanese banking abroad. A Japanese banking commission has just completed a tour of South America, and it has been decided to establish banks in the following places:—Santiago and Valparaiso, Chile; Montevideo, Uruguay; Buenos Ayres, the Argentine; Rio Janeiro, Sao Paulo, Para, Pernambuco, Bahia and Manaos, in Brazil. These banks, it is understood, will not compete with Japanese commission houses or exporters, as American banks have done.

THE CANADIAN NEWSPRINT QUESTION

The newsprint section of the Canadian Pulp and Paper Association held a meeting the other day at the Ritz Carlton Hotel in Montreal, and dealt with the charge recently made by the American Newspaper Publishers' Association, that some of the newsprint exported from Canada was going to unfriendly alien newspapers. The Canadian manufacturers point to the fact that newsprint is exported from this country only under license from the Trade Board of Canada, which of itself is sufficient guarantee.

A reply to the memorial of the American Newspaper Publishers' Association was drafted, as follows:—

"The newsprint section of the Canadian Pulp and Paper Association, comprising the principal manufacturers of newsprint in Canada, notes with astonishment a resolution purporting to have been passed by the American Newspaper Publishers' Association, at their annual convention in New York, to the effect that a substantial percentage of present exports of newsprint paper from Canada and the United States is going to newspapers unsympathetic with the interests of the Allies, and demanding that the War Trade Board of Canada prohibit exports of newsprint paper from this country to other than allied countries.

"The manufacturers refrain from commenting upon the unusual circumstances of an organization of business men in a foreign country undertaing to control through the government of Canada any part of the export trade of this country, but would point out that so far as the export of Canadian newsprint is concerned, it is all done under licenses, issued by the War Board of Canada, which is a sufficient guarantee that none of these exports are sent to unfriendly alien countries.

"The shortage in the supply of newsprint paper, about which the American Newspaper Publishers' Association is justly concerned, is due, in a large measure, to the ill-advised attempts of the newspaper publishers to obtain their supplies of newsprint paper at a price inconsistent with the cost of its production. These attempts have led to prolonged government investigations in both the United States and Canada. In the United States some of the mills formerly devoted to the production of newsprint have found it more expedient and more profitable, as a result of this interference, to divert their mills to other uses. In Canada, where the industry has been under investigation for over a year, the result has been to imperil our foreign market; to undermine confidence in the future of the industry to the extent of rendering it inexpedient to invest new capital in its expansion and development; to provoke unrest and dissatisfaction among the labor employed in the industry, and generally to exercise a demoralizing effect upon the industry and to contribute to the difficulties and uncertainties with which newsprint manufacturers, in common with others, are confronted as a result of war-time conditions. Its ultimate effect, if persisted in, must be one of serious and lasting injury to the industry, of financial loss to those engaged in carrying it on, as well as of national economic detriment.

"Attempts to fix an arbitrary price for newsprint paper have had the effect that such attempts usually meet with, that of restricting production. Had the Canadian manufacturers of newsprint paper been left free to develop their business unmolested, in the same way that other Canadian industries have been left free, the industry would have made much greater progress in the last eighteen months. New mills would have been installed and the production increased to such an extent that the present complaints of a serious shortage would have been in large part, if not altogether, rendered unnecessary."

"Woe unto you that are full, for ye shall hunger."

Luke 6 : 25.

Not spiritually (although even the penalty of remorse may follow your neglect of this national warning) but ye shall hunger in the trying physical sense in which hunger now grips the peoples of Europe.

We know "it is difficult to talk to the belly which hath no ears," and it is just as difficult to persuade a person who has a full dinner before him to-day that he may want for food next month.

But you may as well let this fact sink into your mind—*the last people that Canada and the United States will allow to suffer for want of food are our fighting men,* and if a sufficient exportable surplus of food cannot be raised and saved by voluntary efforts, then very drastic rationing measures will be enforced.

It may astonish you to learn that in 1917 Ontario did not grow enough wheat for its own needs. Consequently every Ontario farmer whose land is suitable, has been urged to sow 5 acres more spring wheat this year so that Ontario's demand for wheat shall not be met at the expense of that portion of the Western crop that should more rightfully be shipped overseas.

For this same reason every householder who has a garden or a piece of vacant land is being urged to grow vegetables, because the more vegetables that are grown and eaten in Ontario, the less wheat and meat there will be consumed, and that being so, the Ontario wheat crop should then be sufficient to feed our own people, and leave more Western wheat and other foods available for export.

If you have not yet decided to plant a vegetable garden make up your mind to do so now. You will not regret it. There is still lots of time. Potatoes and beans may be planted up to June 1st and these are the best substitutes for wheat and meat.

For good, practical advice upon how to lay out and cultivate a Vegetable Garden, write for a free copy of the booklet entitled: "A Vegetable Garden for Every Home." This has been prepared by the Ontario Department of Agriculture for the guidance of citizens who will respond to this call for increased production.

Earn and Give Campaign for Boys

Six thousand Canadian older boys are invited to earn and give at least Ten Dollars ($10) to the Red Triangle Fund. That means $60,000 in all! Splendid! Five thousand dollars will be used for boys' work in India and China; another $5,000 for the National Boys' Work of Canada, and $50,000 to help the big brothers in khaki. Ask your local Y.M.C.A. representative for information and pledge card. When you have subscribed one or more units of Ten Dollars, you will receive a beautifully engraved certificate.

They Must Not Look in Vain!

AN officer was missing. His brother crept out and found him in a shell hole. He bore him back to the lines—dead. "Are you not sorry you ventured all this?" asked the commanding officer. "No," because when I found him he looked up into my face, smiled and said "I knew you would come!"

What could more fittingly illustrate the work of the "big brother to the soldiers"—the Y.M.C.A.! No danger is too great to be risked for the sake of the physical, mental and spiritual welfare of those dauntless heroes of Ypres, St. Julien, Vimy Ridge, Passchendaele! Everywhere he goes the Y.M.C.A. follows—faithful to the limit of its resources.

Y.M.C.A.

Red Triangle Fund

$2,250,000, May 7, 8, 9

Canada-Wide Appeal

Think of the inspiration to the Canadian Soldiers in this tremendous Campaign of 1918 as they learn that the folks at home are heart and soul behind them, showing it by a magnificent response to the Red Triangle Fund appeal—the worth while way!

Help the Y.M.C.A. to increase its helpfulness. Help it far as possible to measure up to the boundless need! Help with your money, that more and ever more soldiers can say, "I knew you would come!"

Many people are located at points where one cannot get into touch with any canvassers working in aid of the Red Triangle Fund. If you are so situated, send your money direct. Remit by cheque, money order or registered letter to Thomas Bradshaw, National Treasurer, Red Triangle Fund, 120 Bay St., Toronto. Make your contribution as large as possible, but whether large or small it will be welcome.

Can Need be Measured?

Referring to the Y.M.C.A. huts, Francis B. Sayre says in Harpers: "I have seen the halls so crowded on the occasion of some religious talks that after the benches were all filled and the standing room taken, soldiers kept crowding in through the windows to sit on the floor of the platform, and others remained outside to listen to the speaker through the windows."

A Village Without Y.M.C.A.

Here is the same writer's picture of a French village *without* a Y.M.C.A.: "With only evil ways in which to spend money burning in their pockets, with nothing to relieve the dull monotony of idle evenings, many of them began to get lonely and homesick, or to drift along dangerous paths.

"It was not many days before officers began to send hurry calls for the Y.M.C.A.: 'For God's sake come down before it's too late and do something for my men.'"

Morale!

British Staff Officer Defines It —How Y.M.C.A. Enhances this Great Factor of Victory

"IS VICTORY always on the side of the biggest battalions?" was asked of a British staff officer, as recorded by Dr. John R. Mott in the "Ladies' Home Journal."

"It is and it isn't," he replied. "There's something else. You cannot chart it, you cannot weigh it, you cannot express it in any military figures. But Napoleon knew what it was and he called it 'morale.'

How Morale is Created

"I cannot define for you exactly what morale is, but I can tell you it comes in many different ways. I have known morale to be found in a cup of hot coffee. That sounds unromantic. But think what that means to a man who has had ten hours consecutive shelling.

"I have seen morale created by a man's taking a big risk; I have seen it sustained by a man's merely writing a letter home just before he went into action. You can describe morale," he continued, "in a score of ways, little and big.

"It may come from faith in a future life or from the thought that one is protecting the loved ones at home. *But if you want an easy and short definition of morale, you will find a good one in the four letters 'Y.M.C.A.'* "

Strengthening Morale

And he took his questioner to the window and showed him men trooping into a Y.M.C.A. hut.

"Those are men," he said, "who will be going up to the front line to-morrow. Some of them will be playing games, others will be writing home, others will be attending divine service, but each in his own way will find a strengthening of his morale in the comradeship of his fellows beneath the symbol of the Red Triangle and the inspiration for which it stands.

Y.M.C.A. Playing Big Part

"All this is a thing which I cannot show on my charts. But it is also a thing which is going to turn the balance in our favor. Go back and tell the people at home that a dry soldier, concerned alone with military calculations, believes that the Y.M.C.A. is playing a far bigger part in winning the war than any mere civilian can recognize.

"I do not speak to you as a philanthropist. That is not my job. But I want to see the end of this horrible business, and if a soldier's words have any weight, tell them at home to help the Y.M.C.A. to carry on its work."

25

SUITS AGAINST SHAREHOLDERS

Partially Paid Stock Subscriptions—Case Where Shareholder is Also Creditor

BY M. L. HAYWARD, B.C.L.

According to English, Canadian and American law, a subscriber or stockholder in a corporation can be sued by the corporation and compelled to pay for his stock or for any unpaid balance thereon. Such an action for unpaid stock is properly brought in the name of the corporation; but if the corporation becomes insolvent the capital stock and property of the corporation are regarded as a trust fund for the payment of its debts, so that the creditors have a lien upon the corporation funds for the payment of their claims in preference to the claims of the shareholders.

It follows, then, that if a corporation becomes insolvent the assignee or receiver of the corporation may bring action against a stockholder for unpaid stock for the purpose of having the money paid into the funds of the corporation to satisfy the claims of the creditors.

All this is very elementary law, but in this connection a point arises that apparently has not yet been passed upon by the Canadian courts.

The point referred to arises where a shareholder has a claim against the insolvent corporation, which arose before the insolvency, for services, money lent, or any other valid debt, and when sued by the assignee or receiver he claims that he has a right to "set off" the debt from the corporation to him against his debt to the corporation for the unpaid stock. Is this set off allowable?

The American courts, practically without exception, hold that the shareholder cannot do this on the ground that the capital stock of the corporation is a trust fund for the payment of its debts, and that the debt due by him to the trust fund and the debt due from the corporation to him are not in the same right.

Capital Stock is a Trust Fund.

"It is too firmly established," says the Maine Supreme Court, is a case on the point, "at the present day to be questioned that the capital stock of a corporation is a trust fund for the payment of its debts. It is a substitute for the personal liability of the individual members of private copartnerships, and those who deal with the corporation have a right to rely upon its capital stock for their security. Unpaid stock is as much a part of the assets of the corporation as the money that has been paid in upon it. Creditors have the same right to insist upon its payment as upon the payment of any other debt due the corporation, so far as it is necessary to the satisfaction of debts due from the corporation. During the existence of the life of the corporation it is a trust to be managed for the benefit of the stockholders; but in the event of its dissolution, or insolvency, it becomes a trust fund for the benefit of its creditors. If in such case the assets are not sufficient to pay all its debts in full, each creditor is equitably entitled to receive a ratable share of the assets which remain. Hence it follows that where proceedings have been instituted to obtain a general distribution of the assets of an insolvent corporation among its creditors, the shareholders cannot at common law, when sued for the amount due upon their unpaid stock, set-off debts due to them from the corporation."

The same principle has been laid down by the New Jersey courts in the following words:—

"The debts are not substantially the same. They are not in the same right. The capital stock of the bank is a trust fund for the security and payment of the creditors, and it is the duty and legal obligation of the stockholders to pay it in according to their agreement, in order that it may be applied to the payment of the debts. A stockholder is not relieved from that duty and obligation by the fact that he is a creditor. To permit him to set off the debt due him would, where the corporation is insolvent, manifestly give him a preference as a creditor. To this he is not entitled. It is the right of the other creditors to have him pay in the money due from him for stock as part of the fund for the payment of the debts."

Following out the above line the United States courts have also established the principle that a creditor of an insolvent corporation who has reduced his claim to judgment may proceed against a stockholder for his unpaid stock, either to satisfy the judgment creditor, or to render the amount liable for the claims of all the creditors who join in the action. In such a case is the stockholder entitled to set off a debt due to him from the insolvent corporation?

The rule which has been laid down by the majority of the American courts is that the stockholder is not entitled to do so. If he could it would be manifestly unjust, as, if the stockholder owed $1,000 on his stock, and the corporation owed him $1,000, and he could set off one claim against the other, he would get his claim in full while the ordinary creditors might be able to collect but a few cents on the dollar.

Debt Due Stockholder Not Superior.

"It is a fundamental principle," says the Iowa Court, "that the capital stock of a corporation is in the nature of trust property held for the benefit of creditors. As there is ordinarily no individual liability of the stockholder in excess of his obligation to pay in full for his stock, it appears to us manifestly unjust to allow him to set off his claim as a creditor against his liability as a stockholder. If permitted to do so, his claim as a creditor might be paid in full while the other creditors would receive only part of the amount due them. It is true a stockholder has a right to deal with a corporation the same as any other person, and if sued by the corporation for unpaid instalments on his stock, he may have the right to set off debts due to him from the corporation. But as against the claim of a mere creditor, who has the right to demand that the capital stock shall be kept unimpaired for the payment of creditors, it is apparent that the rights of the parties are quite different. The debt due to a stockholder ought not to be held as superior to the claims of creditors."

The following quotation from the South Carolina Court is to the same effect:—

"Suppose, every stockholder of an insolvent corporation had a claim against it equal to the amount of his unpaid subscription, and that there were other creditors holding claims to a much larger amount than those held by all the stockholders. If the stockholders could set off their claims against the amounts due by them upon their unpaid subscription, no other creditor would get a cent upon his claim. This would give a preference to those whose acts caused the insolvency of the corporation over those who had no control in its management and in no respect chargeable with its failure."

The same rule has been followed by the United States Federal Courts and by the Colorado, Michigan, Nevada, New Jersey and Pennsylvania courts, in addition to the Iowa and South Carolina courts already referred to.

In New York and Missouri, however, the courts hold that where a judgment creditor attempts to collect the unpaid stock subscription to apply it to the payment of the creditor's own judgment, and not for the benefit of all the creditors of the corporation, the stockholder may set off his debt in the ordinary way.

The following quotation is from the Missouri Court:—

"The argument of those who deny the equity belonging to the relation of a stockholder as a creditor starts with the proposition that all capital and obligations for unpaid capital constitute a trust fund for creditors—a proposition which everyone in this country will admit. It is next argued that if a stockholder is permitted to bring forward his claims against the company as an offset against his liability to creditors, he would in this manner obtain payment of his demand in preference to other creditors. Accordingly he is entirely excluded by this course of reasoning as a creditor, and the trust fund in dispute is handed over entirely to the suing creditor, who thereby obtains full preference and satisfaction of his demand, thus obtaining the advantage which was denied to the other creditor, merely because he was a stockholder. It is difficult to perceive on what principle one creditor should be preferred to another. The injustice of the inequality is as apparent when it is suffered by one as by the other. A stockholder has the same right with a stranger to become a creditor of the company. Neither is there anything illegal or reprehensible in the mere fact of his being indebted to the company for unpaid stock. It may be that he has paid all calls which have been made upon him, and that he is not delinquent in any respect. Be this as it may, his unpaid stock constitutes assets of the company in like manner as if paid up, and creditors along with himself may be regarded as contracting with the company on the faith of this unpaid stock, in like manner as if paid up. It constitutes the same amount of assets in whatever form it may be. The defendant, notwithstanding he is a stockholder, has the right as a creditor to a share in this fund."

It is submitted, however, that the majority rule of the United States courts and not the New York rule expresses the true principle and that it would be followed in Canada.

ALBERTA COAL

According to a booklet recently issued by the Coal Operators of Northern Alberta, 3,000,000 tons of coal are annually imported into Western Canada from the United States. At the same time the mines of Alberta are running at less than their full capacity, and are, if necessary, capable of supplying all the needs of the West, and thus releasing a large quantity of coal which might be used to advantage in the United States and Eastern Canada.

While the further use of local coal in the West is to be desired, the freight situation there is so serious that government action would in all probability not be effective in remedying the situation. The labor involved in increasing the production might be more profitably used in transportation. It is no satisfaction to the citizens of Brantford, who have offered $40 a cord for wood, to know that Alberta mines are unable to obtain sufficient coal orders at $3 per ton.

LIBERTY LOAN PAMPHLET

Spencer, Trask & Company, New York, have issued for gratuitous distribution a timely and informative pamphlet giving in concise form the salient features of the Six Liberty Loans which will be outstanding when the present Third Liberty Loan 4¼'s will have been issued.

Sir Herbert S. Holt, president of the Royal Bank of Canada, who returned on April 25th from his trip to Cuba, where he inspected the bank's branch system, stated that business conditions were wonderfully prosperous there. The boom in sugar has stimulated development to a wonderful extent, he said, and with settled conditions politically, the island is going ahead very fast.

APRIL MUNICIPAL BOND SALES

Largest for the Month Since 1915—Montreal Catholic Schools Sells Issue

The municipal bond sales in Canada during April totalled $3,968,995, compared with $9,191,643 in March and $1,182,974 in April a year ago. The April records of municipal bond sales at home for the past nine years are as follows:—

April.	Municipal bond sales in Canada.
1910	$6,805,078
1911	3,910,288
1912	927,160
1913	3,693,857
1914	2,847,953
1915	8,603,094
1916	1,979,852
1917	1,182,974
1918	3,968,995

The following are the details of the April sales:—

British Columbia.

Municipality.	Rate %.	Term (years).	Amount.
Courtenay	6	20	$ 20,000
Revelstoke	5½	10	8,500
Victoria	6	10	1,000,000
			$1,028,500

Saskatchewan.

Municipality.	Rate %.	Term (years).	Amount.
Moss Bank	.	..	$ 3,000
Saskatoon	5	30	100,263
Frontier	.	..	7,500
			$ 110,763

Alberta.

Municipality.	Rate %.	Term (years).	Amount.
School Districts	7	10	$ 17,480
School Districts	7	7	2,000
			$ 19,480

Quebec.

Municipality.	Rate %.	Term (years).	Amount.
Verdun	6	5	$ 450,000
Sherbrooke	6	5	150,000
Grand-Mere	6	10	40,000
Montreal Catholic Schools	.	..	1,650,000
			$2,290,000

Ontario.

Municipality.	Rate %.	Term (years).	Amount.
Bradford	6	30	$ 15,600
County of Lincoln	5	10	50,000
County of Essex	6	20	60,000
Niagara Falls	5	20	20,000
Niagara Falls	5	30	6,152
County of Wentworth	6	5	150,000
Listowel	6	20	40,000
Niagara Falls	5	30	28,500
Belleville	6	10	50,000
Kingston	6	30	100,000
			$ 520,252

The following table summarizes the above details:—

Province.	Municipal bond sales, April, 1918.
British Columbia	$1,028,500
Saskatchewan	110,763
Alberta	19,480
Quebec	2,290,000
Ontario	520,252
	$3,968,995

The following table shows the sales of municipal bonds, in Canada only, during the past three years and this year to date:—

	1915.	1916.	1917.	1918.
January	$ 1,784,947	$ 1,909,441	$ 1,969,256	$ 561,000
February	3,047,011	1,419,909	458,874	5,243,279
March	2.572,357	2,027,741	229,013	9,191,643
April	8,603,094	1,979,852	1,182,974	3,968,995
May	3,464,281	2,649.000	1,375.039	....
June	2,395,744	3.043,283	1,642,003	....
July	1,618,422	1,521,525	3,814.489	....
August	1,087,415	852,447	4.637,836	....
September	2,768,484	960,435	440.268	....
October	1,245,874	1,361,665	398,771	....
November	1,645,892	1,246,480	917,191	....
December	1,676.693	669,000	890,000	....
Totals	$31,910,214	$19.640,778	$17,955,714	$18,964,917

The sales of Canadian municipals in the United States market during the past three years, and this year to date, compare as follows:—

	1915.	1916.	1917.	1918.
January	$ 340,000	$ 3,183,215	$ 2,454,000	$ 10,000
February	6,471,000	899,500	485,725	300.000

MUNICIPAL BOND MARKET

Province of Ontario.—Messrs. Macneill and Young, of Toronto, have been awarded a block of $500,000 6 per cent. treasury bills.

Tweed, Ont.—Messrs. Macneill and Young, of Toronto, have been awarded a block of $10,000 6 per cent. bonds, payable in 20 annual instalments.

Montreal, P.Q.—The city council authorized the city clerk to prepare a by-law authorizing a temporary loan of $2,000,000 in anticipation of revenue.

Kingston, Ont.—City awarded a block of $100,000 6 per cent. 30-year bonds, to yield 6.10 per cent., to Messrs. A. E. Ames and Company, Toronto, in joint account with Messrs. Wood, Gundy and Company, Toronto.

Brampton, Ont.—Messrs. Brent, Noxon and Company, of Toronto, have been awarded a block of $60,000 6½ per cent. bonds, payable in 30 annual instalments for High School purposes, and a block of $35.000 6½ per cent. 10 and 30-year local improvement bonds.

Montreal, Que.—The date for receiving subscriptions for the Montreal Catholic School Commission debentures has been extended from May 1st to May 15th. Up to April 29th, $1,650,000 had been subscribed and it was expected that the whole amount would be taken by May 15th.

Victoria, B.C.—The city has awarded a block of $1,000,000 6 per cent. 10-year notes, of which $525,000 went to Messrs. Macneill and Young, Housser, Wood and Company, Morrow and Jellett, Toronto, and Greenshields and Company, of Montreal; $250,000 to the Dominion Securities Corporation, and Wood, Gundy and Company, Toronto; $150,000 to the Oxford Securities Corporation, Limited, Toronto, and the balance to a western bond house. The information given in last week's issue regarding this matter was not quite correct.

UNITED STATES CREDIT FOR CANADA

Sir Robert Borden, and Sir Thomas White have succeeded in arranging a credit of $40,000,000 in Canada, for the British government. The latter, it is understood, is to purchase the entire exportable surplus of Canadian cheese, and the credit has been established for this purpose.

THE WESTERN OUTLOOK

Crop Conditions Favorable—Money Plentiful in the West —The Loan Situation

(Staff correspondence.)

Brandon, April 28th.

The west, as far as seeding and spring operations are concerned, got off to one of the best starts in many years, and the outlook is promising. At Portage la Prairie and on the Portage Plains, where there has never been a crop failure, the season is exceptionally well advanced. Wheat seeding was completed a week ago, the soil being in splendid shape to receive it. High winds, causing drifting of the soil, have been somewhat bad this spring, but in the Portage district the soil is very heavy and no serious results are expected from this cause. Little increase in acreage has been sown.

In the Brandon district and western Manitoba similar conditions prevail. Wheat seeding is completed, and under the most favorable conditions.

In discussing the outlook with *The Monetary Times*, a large dealer in farm lands in Brandon said:—

"Brandon city is digging itself in more firmly than ever before. It is on a firm foundation. First, we have no failures to report in business. Second, we have a large number of prosperous merchants, who are doing a larger cash trade than ever before. Their very windows seem more cheery and inviting. The masses are adopting the system more than ever of carrying home their parcels from the stores. This is in itself a wonderful saving; it enables the merchant to put more goods in the parcel.

"In place of standing still during this terrible war, stores are being built on Tenth Street. A modern office building has just been completed by Mr. Patterson, opposite the Cecil Hotel, a beautiful building for financial and mercantile purposes. There is also some outside money being invested here. A modern apartment building is just being completed. There are also a number of cottages being built around the city. Messrs. Bartlet and Beaubier are erecting two fine stores on Tenth Street, leases for which have already been signed for a term of years. The demand for good homes is increasing.

"From the agricultural viewpoint, this district is going in still more for live stock. There is also a great demand for milk, butter and eggs, and, with high prices prevailing, the farmers everywhere are prosperous. At least 70 per cent. of the seeding is done at this date. Farmers are sowing more rye and coarse grains than ever.

"Land is higher and in greater demand than has been the case for some time. One half-section sold for $67 per acre, three miles from the city; another sold for $55 per acre, six miles from the city, and another brought $50 per acre. This is a sample of the prices being paid for good farms here.

"A sight worth seeing in Brandon on Saturday afternoons and evenings is the farmers' cars standing at the shopping centre. Farmers are right up to date, and are the most prosperous members of the community."

Mortgage Loan Situation.

Mr. J. R. Stone, a prominent loan man of Brandon, general agent for Manitoba and Saskatchewan of the Hamilton Provident and Loan Society, said to *The Monetary Times*:—

"During the past year this society's maturing mortgage instalments, both of principal and interest, were exceptionally well met. The yield from the 1917 crop was in some cases only moderate, but the high prices for all grains enabled farmers to meet their liabilities to probably a greater extent than ever before. Not only the prices secured for their grain enabled them to do this, but we note a marked tendency towards economy among the farming population. There is a decided tendency to refrain from purchasing anything that they cannot see clearly how they are going to pay for and a strong desire to reduce their present liabilities. For the past two years there has been but a very small demand from farmers to borrow on farm mortgage loans, and but a very limited demand for farm lands. There is in the last few months a very decided change, and dealers in farm lands all report a good demand. This society have a large farm mortgage business in both Manitoba and Saskatchewan, and have not an acre of farm land on hand. The labor situation has been a cause of worry to many farmers, but the early spring, coupled with the almost perfect condition of the soil, has enabled numbers of farmers, even though short of help, to complete wheat seeding at an earlier date than they were able to start on the land last year. The seed is being sown under the best of conditions, and all present indications point to an increased acreage."

Regina, April 30th.

District Business Good.

Crop conditions are well advanced in the Regina district, and reports indicate that Saskatchewan will show a considerable increase in acreage over last year. In discussing the situation with Hon. A. C. Dunning, minister of finance in the Saskatchewan government, who has had charge of the Greater Production campaign, he told *The Monetary Times* that the prospects at the present time for a record crop were never better, the labor situation was satisfactory, and little hardship for the spring work in this connection had been felt. Mr. Dunning pointed out, however, that the new Military Service Act would undoubtedly work a hardship on the western farmers, taking up, as it would, all the young men. He felt that the situation would have to be met by other means, and that the present war situation demanded sacrifice from everyone.

The seed in the Regina district has gone in under very favorable circumstances, with plenty of moisture to give it a good start. Wheat seeding is, in many instances, completed, and is easily several weeks ahead of last year. General conditions in Regina are very good. There is not a house or an apartment to be had, and rents have advanced considerably, five-room suites easily bringing $50 a month. Wholesale houses report a good volume of business. One prominent wholesale grocer told *The Monetary Times* that they never had as little credit on their books as this year, and that their outstandings were less than they had been for several years. Implement dealers have done splendid business this spring, mostly on a cash basis. The farmers, as a whole, have money in the bank and are not asking for credit.

Opportunities for Investment in Regina.

There are splendid opportunities for investment of funds in Regina at the present time in apartment blocks, wholesale houses, or in retail stores. The immediate need for these was pointed out to *The Monetary Times* by L. T. McDonald, the energetic secretary of the Regina board of trade. Funds invested in any of the above would show excellent returns. The T. Eaton Company have started work on their large mail order house at Regina, which is to be rushed with all possible speed to take care of the fall trade. The Robert Simpson Company report splendid business from their Regina branch.

If the telegraph business is a fair criterion, business conditions generally throughout the west are excellent, according to W. M. Marshall of Winnipeg, assistant general manager of Canadian Pacific Railway telegraphs.

Mr. Marshall states that business men had accepted war conditions, and were extending their businesses in all directions, the result being a very marked improvement during the past few months in commercial telegraph traffic.

Another indication that the country is financially prosperous, in Mr. Marshall's opinion, is the large sums which are being donated in individual subscriptions to the Red Cross fund and other war and patriotic funds.

MORTGAGE AND TRUST COMPANIES' ASSOCIATION OF BRITISH COLUMBIA

The annual general meeting of the Mortgage and Trust Companies' Association of British Columbia was held in the board room of the Mainland Fire Underwriters' Association, on Tuesday, the 16th day of April, 1918, at 3 p.m. Present, the president, Mr. G. L. Smellie, in the chair, and 18 representatives. Mr. John Appleton, secretary-treasurer of the Dominion Mortgage and Investments' Association, of Toronto, was also present and addressed the meeting.

The report of the executive committee, outlining the work done during the year, which was read and adopted, drew attention to the fact that the association had asked the government to make certain amendments to the "War Relief Act," the "Land Registry Act," the "Trustee Act," and also in land registry office regulations.

The membership of the association now comprises thirty-one representative financial houses.

The election of officers resulted as follows:—President, G. L. Smellie; vice-president, J. R. Waghorn; secretary-treasurer, Geo. L. Schetky; executive committee, Messrs. A. C. Stirrett, R. Kerr Houlgate, A. E. Plummer, H. M. Forbes, G. H. Dorrell and J. L. Kerr.

A more detailed report of the proceedings will appear in a subsequent issue of *The Monetary Times*.

THE COMING REVOLUTION

Increased Importance of Organized Labor — Great Changes Impending

BY MR. J. L. PAYNE.

Charles M. Schwab is alleged to have said that inside of a relatively short time labor will control the principal nations of the world. There is some controversy as to what Mr. Schwab actually said, and still more as to what he meant; but the preponderance of opinion is in favor of assuming that he predicted a dominating position for organized labor, as distinct from labor in the broadest sense. It is not worth while to pause and debate the value of Mr. Schwab's prophetic instinct as against the judgment of any other man with open eyes and a clear head. The immediate point of interest is that Mr Schwab anticipates a vast and vital revolution—economic, political and social in character—and that he may be within the realm of probability.

Mr. Schwab does not stand alone in his view of probabilities. Everybody who observes and thinks is convinced that great changes are impending. It appears impossible anything else can happen than that out of the welter and woe of the war will emerge a new world. Will it be a better world? If not, then the crushing thought is unavoidable that all the slaughter and sacrifice, on the battlefield and in the homes of millions, will have been in vain.

What will be the trend of the approaching revolution as it develops? What forces may be expected to give direction to the upheaval? In other words, what changes will be sought, and what agencies will be likely to co-operate in bringing them about? Such questions open up a field of speculative thought so expansive and perplexing that one not only shrinks from invading it, but lays himself open to the reproach of immodesty in offering a forecast.

Democracy Secure.

No special prescience is required to foresee the first demand of stricken and suffering humanity. Wars must cease. The clash of nations in battle must be made impossible. That means the establishment of a firm and enduring democracy the world over; for the true cause of the present Armageddon, as in the case of all preceding conflicts, will be found to rest in autocracy. The common people have had no voice in the matter. We Britons may say that monarchies of the German type will disappear in the coming revolution, and ought to. We live under the broadest and most flexible democracy in the world, and can sing "God Save the King" with a clear conscience. The people of other countries will insist on having corresponding freedom, and that is what President Wilson meant when he said "the world must be made safe for democracy." The last trace of kingly prerogative over the will of the people must go. Then by agreement war could be made impossible.

Upon this foundation of a triumphant democracy many new structures will be built. Others will be begun and abandoned, since it has been a common characteristic of all recorded revolutions that the wildest spirits in the community have been heeded first. Their unsound creations have perished, however, under the pressure of riper judgment. History will probably repeat itself. Be that as it may, we may look for an early effort to settle relative rights of capital and labor. Mr. John D. Rockefellor, Jr., has recently announced the only hopeful basis of a permanent settlement. He believes that misunderstanding has been the chief cause of nearly all conflict, and that the moment the mutuality of capital and labor is recognized by both sides all danger of trouble will be removed. Unrest, suspicion and hostility will disappear, and co-operation, with a reasonable share to labor of the profits of production, will succeed to the plan now in vogue.

Capital and Labor.

In my humble judgment, a reform of even more sweeping significance will be attempted, and should succeed, if the lessons of the war have been learned—and that is a sane and scientific treatment of the production, distribution and sale of food. This will involve the recognition of the rights of both producer and consumer. Their interests are just as mutual as are those of capital and labor; yet under the existing system, if it can be said there is anything whatever in the nature of an organized plan, these two classes—in either of which every soul in the country belongs—have never come together for the purpose of even talking over their business relations. The middleman has controlled the situation, and he has not always been just to either. He has very often thriven at the expense of both, and he has, more than all other causes combined, been responsible for the flight of prices since 1893. He need not be eliminated. In fact, he is necessary; but he can be controlled, just as one of the other agents in the scheme of distribution, the railway, is now absolutely controlled. This is a very big question, which touches everybody, and it simply must be settled. Up to this moment there has not been the slightest effort to regulate the huge business of producing and selling food, and, when the matter is calmly examined, there is no reason in the world why a practicable plan should not be worked out. No greater benefit of an economic character could accrue to mankind; for food prices lie at the foundation of all prices.

Something will probably be done to limit the wealth of individuals; and, as collateral to such an untried measure, we may look for the permanent application of the principle which is crystallized in our present income tax and surplus business profits tax. The two things would run together. Of perhaps larger importance would be the attempt to set up a definite plan for the operation of public utilities, to which will be linked an extension of state ownership. That is to say, a sharper line will inevitably be drawn between the duty of the state and the rights of corporations, or individuals, to operate certain enterprises. Large problems are at once suggested. Going one step further, it is not impossible that the radicalism of the new and vitalized democracy will declare against the private ownership of land, and provide for the gradual return to the state of all rights in that regard. Such a scheme has for twenty-five years been in process of execution in New Zealand; so that it is by no means novel. Thus, in two paragraphs, has been sketched a series of changes, all of them possible and some of them probable, which would create practically new foundations for the economic life of the nation.

The Moving Force.

What forces might be expected to come into play for the development and execution of these revolutionary measures? Precisely the forces which have started and carried out all revolutions—the more or less submerged, hitherto inarticulate, but nevertheless powerful, common people. They have long felt the inequalities of the existing order. They have been steadily rising to a sense of their power in combination. There is no need, however, for alarm. The two greatest revolutions in history, the French in 1789 and the Russian in 1917, were evolved out of conditions essentially different from those which prevail in America and Great Britain. Relief from autocracy and despotism were the primary objects sought, and both movements were in the hands of men wholly unfitted to govern. The chasm between the ruling classes and the masses was wide and deep. Neither on this side of the Atlantic nor in Great Britain do these conditions obtain. In France, as in Russia, 80 per cent. of the revolutionists were illiterate. A mighty safeguard in Anglo-Saxon countries is the ability of the proletariat to read and write. We invested wisely when we set up compulsory education. The means of getting together, which is the secret of harmony by co-operation, are at hand. This will undoubtedly prevent spasmodic and half-digested efforts at reform; but, since we are all agreed that the world is in the melting pot, the smouldering desire of the masses for changes is certain to burst into flame as soon as the war is out of the way.

Wider Social Changes Also.

There will also be a social revolution. We hear the first rumblings of discontent in the demand that hereditary titles shall not be planted on our soil. Under any circumstances, ten years hence, the real aristocracy will be made up of those who have done something of real value in the war. We see a rapidly and peacefully developing movement for the larger recognition of women in our scheme of government. The question is being asked as to whether or not the Christian Church as an organization has not given first place to creed rather than to service, and in the answer lies the possibility of far-reaching changes in the relationship of religion to the every-day life of the people. Unless the principles taught by the Divine Master are made the foundation of all that is either attempted or done, the world will not find a permanent solution of its problems nor a real betterment of conditions. There is a consensus of judgment among thinking men and women that the bitter discipline of war was needed to check the saturnalia of extravagance which had grown out of two decades of unprecedented prosperity. The basic unit of the state—the home—had been imperilled by this madness. What greater blessing could come to us than a swift return to simplicity of life? The war has given effect to a levelling

process in society. Men and women have been co-operating in a great many ways without regard to ordinary social distinctions, and all that must have a more or less permanent effect. Moreover, it is impossible that the spirit of genuine service which has been created can perish. It will take other useful forms of demonstration when the guns have been silenced in Flanders. In a word, in our social relations, as in every other relation, the practical recognition of brotherhood would cure all our ailments.

One closing word. No apology need be offered for the foregoing observations. The writer may be astray in some aspects of his diagnosis and in some of his predictions based thereon. But he has not gone outside the realm of possibility. Sound thinking at this stage will pave the way for that co-ordination of sagacity and effort which alone can ensure safety when the day of settlement comes. Enough has been suggested to arouse those who sleep.

STEEL INDUSTRY IN BRITISH COLUMBIA

Bill Introduced in the Provincial Legislature Granting a Bonus on Pig Iron Production

(Staff Correspondence.)

Vancouver, B.C., April 25, 1918.

Iron ore deposits in British Columbia and the value of a bounty to encourage and assist iron and steel manufactures were discussed by Hon. William Sloan, provincial minister of mines, in connection with the proposal before the British Columbia legislature to grant a bonus on pig iron produced in the province. Figures given by him will be of further interest because a committee from the coast has been at Ottawa seeking federal aid to develop the steel industry in a section of Canada where ore is abundant and where steel is more and more needed.

It was pointed out by Hon. Mr. Sloan that in attempting to give any idea of the iron ore deposits of the coast of British Columbia, the fact is apparent that none of the known deposits have been worked other than superficially, and few have received any further development than very shallow open cuts, tunnels or shafts. It is estimated that for Vancouver Island and Texada Island alone, the actual and probable ore totals over five million tons, which would be sufficient to supply the requirements for 25 years, if the raw material necessary for a blast furnace is placed at 200,000 tons of ore a year, which is equivalent to 100,000 tons of pig iron. One engineer has given an estimate of the magnetic iron ore on the southern coast of the province, as far as he examined it, of 10,500,000 tons.

As to coal available for coking purposes, there is no supposition, as British Columbia mines have an established reputation. In 1916, the value of the product of the collieries was $8,900,675, and in 1917, $8,518,784. In 1916, coke produced amounted to 267,725 tons, valued at $1,606,350, and last year 159,554 tons of coke brought $957,324. In submitting these figures, Hon. Mr. Sloan did not refer to the difficulties in 1917 of maintaining the coal and coke output. At present the manufacture of coke is but an incidental, and most of it is produced at the Crow's Nest Pass Collieries, while a small amount is made at Union Bay, Vancouver Island. This industry is but in its infancy, and within the year the output will be increased by the inauguration of a coal mining and coke manufacturing industry by the Granby Company. With a demand for fuel for smelting purposes, there is no question but that it will be forthcoming.

Federal Bounty as Precedent.

The bounty granted by the Dominion government was referred to to show that the policy of offering a bonus on the production of iron is not an experiment. In 1894, the Federal government offered a bounty of $2 a ton on pig iron and steel, which was raised in 1897 to $3 a ton. In 1899, the bounty was graded down, and in 1903 a bounty of $3 a ton was placed on wire rods; $3 a ton on structural steel and the same on rolled plates. These bounties were extended to 1907. Pig iron manufactured from Canadian ore from 1907 to 1910 was allowed a bounty of $2.10 per ton in 1907 to 90 cents per ton in 1910. On pig iron manufactured from foreign ore during the period extending from 1907 to 1910, there was a bounty graded from $1.10 per ton in 1907 to 40 cents per ton in 1910. On puddled iron bars, it was placed at $1.65 per ton in 1907, and graded down, until in 1910 it was 60 cents per ton. Bounties were also given on rolled round iron bars. The two companies which derived the greatest advantage from this policy were the Nova Scotia Iron and Coal Company and the Dominion Iron and Steel Company. That this policy proved beneficial, one has but to refer to the present standing of either of these concerns, which were extended a helping hand until able to care of themselves. While government assistance was a vital element in getting a steel industry started in British Columbia, it would also require application of intelligent, energetic and courageous management. It is important, Hon. Mr. Sloan pointed out, that when capital is ready to take up the task and able men with a thorough knowledge of what they are undertaking are prepared to enter into it, the government adopt a policy that will guarantee reasonable aid and assure them of stable conditions insofar as it is possible for a government to do.

The bill granting a bonus on the production of pig iron has been introduced in the British Columbia legislature in view of the fact that there is iron ore of good quality in the province, and that not only is there a market for steel that warrants a start being made in its manufacture here, but that some such action is necessary in the national interests as well as a provincial necessity.

DOMINION INCOME TAX

There have been a number of booklets prepared relative to the Canadian income tax, but one of the most instructive is a digest by Mr. R. Easton Burns, C.A., which gives the entire act, and also shows the discussions in the house on each of the sections. The debates on the questions of minimum income, exemptions, and the application of the tax to partnerships and corporations, are thus clearly shown.

Mr. Burns summarizes the outstanding features of the act as follows:—

"It is a new departure in Canadian methods of raising money for Federal purposes.

"It affects all incorporated companies, associations, partnerships, trustees and persons, whether male or female, having an income of fifteen hundred dollars in the case of unmarried persons and widows or widowers without dependent children, and three thousand dollars in the case of all other persons.

"There is a normal tax of four per cent. on the net earnings of all incorporated companies in excess of three thousand dollars. Companies do not pay a supertax. Partnerships, as such, are not assessed, but each partner pays on his share of the net earnings of the partnership. Profits are assessable whether divided or distributed or not. The normal tax having been paid by a company an allowance is made to the shareholder of four per cent. on the dividends he receives.

"In addition to the normal tax there is a supertax on all incomes in excess of six thousand dollars, varying from two per cent. on incomes between six thousand and ten thousand dollars to twenty-five per cent. on incomes exceeding one hundred thousand dollars. For the purpose of the supertax the undistributed profits held by companies must be included in the returns made by the shareholders. The tax applies to incomes in 1917. In the case of companies which might be assessed for the year 1917 under the Business Profits War Tax Act, 1916, an assessment will be made under whichever act will produce the greater revenue for the government.

"The operation of the act will be under the direction of the minister of finance, to whom considerable discretionary power is given. Returns must be made by all persons liable to be taxed on or before February 28th in each year, beginning in 1918. Every company must make a return of its shareholders and of dividends paid. The finance department will scrutinize these returns and compare the returns made by the shareholders.

"All employers must make a return of their employees in receipt of sufficient income to render them liable to taxation.

"Accumulated profits earned prior to the operation of the act are, in the opinion of the minister of finance, assessable as income for the year in which they are distributed to the shareholders or partners."

In an effort to meet the difficulties caused by the reduction of staff through enlistments, and to release every eligible man possible for oversease service, the King and George Street (Toronto) branch of the Bank of Nova Scotia has been merged with and the business transferred to the Queen and Church Street branch.

CONDENSED ADVERTISEMENTS

The Transfer Books of the Bank will be closed from the 17th to the 31st of May next, both days inclusive.

By Order of the Board.
JOHN AIRD,
General Manager.
Toronto, 19th April, 1918.

THE NORTHERN CROWN BANK

HEAD OFFICE—WINNIPEG

DIVIDEND No. 19.

Notice is hereby given that a Dividend at the rate of 5% per annum on the paid-up Capital Stock of this Bank has been declared for the six months ending May 31st, 1918, and that same will be payable at its Banking House, in this city, and at all its Branches, on or after the first day of June next to shareholders of record at the close of business on the 16th day of May, 1918. The Transfer Books of the Bank will be closed from the 17th day of May to the 31st day of May, both inclusive.

By Order of the Board
ROBERT CAMPBELL,
Winnipeg, April 17th, 1918. General Manager.

THE ROYAL BANK OF CANADA

DIVIDEND No. 123.

Notice is hereby given that a Dividend of Three per Cent. (being at the rate of twelve per cent. per annum) upon the paid-up capital stock of this Bank has been declared for the current quarter, and will be payable at the bank and its branches on and after Saturday, the first day of June next, to shareholders of record of 15th May.

By Order of the Board.
C. E. NEILL,
General Manager.
Montreal, Que., April 16, 1918.

Mr. Stanley Mann has opened an office in the McKinnon Building, Toronto, with the intention of conducting a stock and bond brokerage business. Mr. Mann was formally connected with Æmilius Jarvis and Company and Mackenzie and Company, of Toronto. He served with the colors and received his discharge from the army about a month ago.

Mr. B. M. Parr, provincial manager for Saskatchewan of the Monarch Life, who termed it, when speaking to *The Monetary Times* representative "as the most productive province in the world," said that his agency has practically doubled the business written in the first four months of 1918 as compared with the same period in 1917, and it was considered a bumper year.

NATIONAL FIRE PROTECTION ASSOCIATION

Many Changes Will Be Recommended by Various Committees at Annual Meeting This Month

The twenty-second annual meeting of the National Fire Protection Association is to be held in Chicago on the 7th, 8th and 9th of May. Advance copies of the reports of the various committees have been issued already, so that they may be fully discussed at the meeting. There will also be an address from Mr. W. E. Mallalieu, general manager of the National Board of Fire Underwriters, on "The Public Service of the Fire Underwriter in War-Time," and round table discussions on "Planning Hotels and Apartment Houses for Safety" and "Building Code Essentials."

The following are the committees from which reports will be received: Membership committee; public information; State fire prevention association; Canadian committee; work in fire prevention; fire and accident prevention day; electrical; private fire supplies from public mains; fire pumps; nomenclature; hydrants and valves; field practice; high-value districts; tanks; manufacturing risks and special hazards; explosives and combustibles; protection of openings in walls and partitions; safety to life; fire-resistive construction; uses of wood in building construction; laws and ordinances.

Special Committee Reports.

The committee on fire pumps will recommend certain changes in the regulations for steam, rotary and centrifugal pumps. The report of the committee on nomenclature is not materially different from the report of last year. Definitions which called forth special comment at the annual meeting have been reconsidered. An endeavor has also been made to secure uniform phraseology throughout. The use of words and their definition is considered with special relation to the purposes of fire protection, and the definitions submitted, therefore, are such as will suit the terminology of fire protection rather than the general or popular use of the words or terms. Changes are also to be suggested in the specifications for valves and hydrants. At the 1917 annual meeting the report relating to gate-valve control, then submitted, was referred back to the committee for further investigation. Since that time there have been some notable inventive developments in local supervising devices, based upon the former recommendations of the committee. From several reliable sources there are indications that practical solutions of devices and methods to control this evil are being perfected, and that, sooner or later, something satisfactory will be forthcoming. First aid and fire protection is also to be dealt with, including the questions of area, distribution, placing, recharging and maintenance, and hazard of freezing.

Explosives and Combustibles.

This committee will submit changes in their regulations for acetylene for welding and cutting. The question of the use of kerosene oil for household purposes, which has become more important on account of the shortage of coal, will also be dealt with. Many new stoves and heaters using oil have been thrown upon the market, and in some instances hazardous conditions have been brought about. A code of regulations has accordingly been provided to govern the use of kerosene and fuel for lighting, heating and cooking. Another question will be that of motion picture films, regulations for their protection, storage and handling having been prepared.

Safety to Life.

At the last meeting of the association the report of this committee was accepted, and it was asked to continue its study of the important and complex problem, with the hope that at the 1918 meeting it would be possible to adopt an association standard on methods of establishing the number of persons that could with reasonable safety be permitted in buildings of various types of construction and occupancy, and equipped with varying forms of egress and methods of protection.

The present report is framed accordingly, but for the present at least the regulations are to be applied only to factory buildings, as the problem of the mercantile building, the office building, the school and the place for public assembly differ materially. A plan for establishing number of occupants allowed in factory buildings has been formed, based on the capacity of the stairs and certain other conditions.

This committee, realizing the immense importance of having their establishment as nearly as possible in harmony with the ideas of investigators in this line of work, decided to attempt the assembly of a joint conference of as many technical bodies interested in the suggestion as possible. Two conferences have accordingly been held, at which the following organizations were represented: Committee on Fire-resistive Construction, National Fire Protection Association; Committee on Fireproofing, American Society for Testing Materials; National Bureau of Standards; National Board of Fire Underwriters; Underwriters' Laboratories; Association of Factory Mutual Fire Insurance Companies; American Institute of Architects; American Society of Mechanical Engineers; American Society of Civil Engineers; Canadian Society of Civil Engineers; American Concrete Institute.

Among the objects accomplished at these conferences was an agreement that fire-resistive materials and construction should be classified into three or more grades, based upon the degree of protection which they would afford when measured by the fire test conducted in accordance with a standard time-temperature curve. The adoption of a tentative standard time-temperature curve to control the conduct of the fire tests of materials and construction was also approved.

The committee will also make certain recommendations regarding emergency housing. This is aimed especially at meeting the war emergency situation existing in many industrial centres and to prevent the spread of fire in such structures as may be erected. Regulations are to be discussed for the use and construction of chimneys and heating appliances, dividing partitions, stairways connecting corridors, enclosed courts, etc.

A consolidated and revised report of this committee for the years 1913 to 1917, inclusive, has also been prepared. This report summarizes general definitions; specifications for construction of a standard building; classifications of building according to occupancy; grading of buildings and fire test specifications; specifications for construction of places of amusement; specifications for construction of hotels, apartment hotels and clubhouses; specifications for construction of a department store and of private residences.

GRAND TRUNK RAILWAY PROTEST

Discussing the Grand Trunk meeting, the "Financial News" says the contrast between the nursing of the Canadian Pacific and starvation of the Grand Trunk, which are among the most striking cases in Canadian railway history, renders more unseemly the suggestion that the government should take advantage of the Grand Trunk's distress to acquire it on break-up terms. Sir Robert Perk's resolution protesting against unjust treatment, his admonitions not being confined solely to the Canadian government, should not be lost on the ground of Canadian financial and commercial interests.

DEATH OF MR. GEO. WEGENAST

Mr. George Wegenast, managing-director of the Mutual Life Assurance Company, of Canada, and well-known in Canadian insurance and financial circles, passed away at the Kitchener-Waterloo Hospital, on Wednesday, May 1st, after a brief illness. He underwent a serious operation the day before, but his run-down condition proved a handicap in surviving the shock.

He was a native of Waterloo, being born there in 1860. He was a past president of the Life Insurance Officers' Association of Canada, and a member of the Actuarial Society of America. He was a member of the Methodist Church. He was chairman for the county during the Victory Loan campaign, and a trustee of the Kitchener-Waterloo Hospital Board. During 1914-15 he was reeve of the town, and chairman of the finance committee. He is survived by his wife, Hattie Snyder, daughter of the late John B. Snyder, and one brother, Isaac Wegenast, of Woodstock.

Mr. Thos. F. How, general manager of the Bank of Toronto, has just completed 42 years' service with that institution. During the course of his connection with the bank, begun when a boy of sixteen, he has acted as manager at Gananoque, Brockville, London and Montreal. He assumed the general managership in 1911.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Bancroft, Ont.—April 26—Brick residence, owned by Mr. D. L. Kavanagh, was damaged. Loss, $3,000. Insurance, $1,500. Cause not stated.

Chesley, Ont.—April 26—Munition plant of the Canada Beds, Limited, was destroyed. Loss not stated. Cause, spontaneous explosion of resin pot.

Fredericton, N.B.—April 25—City hall was damaged. Damage, $500. Cause, defective chimney.

Georgetown, Ont.—Printing plant of the Georgetown "Herald" was completely destroyed. Loss on plant, $5,000; on building, $3,500. Cause not stated.

Hamilton, Ont.—April 22—Drug store owned by F. W. Mills was badly damaged. Loss, $2,000. Cause unknown.

London, Ont.—April 22,—Store and warehouse of the Smith Furniture Company was damaged. Loss, $2,000. Cause unknown.

Montreal, Que.—April 18—Drug store of J. Eidlow was damaged. Loss, $25,000. Fully insured. Cause, defective wiring.

New Westminster, B.C.—April 22—House owned by Mrs. Mercer was completely gutted. Loss not stated. Insurance, $3,000. Cause, spontaneous combustion.

Quebec, Que.—April 27—Stable owned by Mr. Donald Atkinson was totally destroyed. Loss, $3,000. Cause not stated.

Retlaw, Alta.—April 23—Oil warehouse and store of the Retlaw Hardware Company, and stores belonging to H. W. McNabb, druggist, and Campbell and White, butchers, were destroyed. Loss not stated. Fully insured. Fire started in oil warehouse.

St. Mary's, Ont.—April 27—Flax mill owned by A. L. McCredie was destroyed. Loss, $25,000. Partly insured. Cause not stated.

Toronto, Ont.—April 26—House on Mutual Street was damaged and a woman received burns from which she died. Damage, $1,000. Cause, explosion of coal oil stove.

April 27—Storage buildings of the Hortop Milling Company, Riseburg and Jackson and the North Toronto branch of the Western Canada Flour Fills. Loss, $9,200. Cause, spark from passing railway engine. Brickmaking plant of the James Lochrie was damaged. Loss, $500. Cause, grass fires.

Vancouver, B.C.—April 23—Burnside Hotel was destroyed. Loss, $10,000. Partly insured. Cause unknown.

Victoria, B.C.—April 24—One of the dormitory buildings of the Military Convalescents' Hospital was damaged. Loss, $2,500.

April 25—Dwelling owned by Mr. Milden was gutted and two adjoining dwellings were damaged. Loss, $1,000. Cause unknown. Dwelling owned by Mr. L. Smith was destroyed. Loss, $3,000. Cause, defective chimney. House owned by Mr. W. H. Coy and the Baptist Emmanuel Church were damaged. Loss, $6,000.

Winnipeg, Man.—April 27—The Parrish Building, Donald Street. Damage, between $25,000 and $30,000. Fully insured.

SOUTHERN CANADA POWER COMPANY

Gross earnings of the Southern Canada Power Company and its subsidiaries for the month of March were $34,314, being an increase of $3,883. The net earnings were $14,447, being an increase of $1,790. For the six months ended March 31, gross earnings were $187,657, being an increase of $45,292. The net earnings were $91,257, an increase of $12,965.

CANADIAN CAR AND FOUNDRY COMPANY

The output of the Canadian Car and Foundry Company for the month of March was $5,250,000, according to the president, Hon. N. Curry. He also stated that most of the business was the regular line, although they were doing some munitions work. Operations in the Fort William shipbuilding plant were going on satisfactorily. Mr. Curry also said that it is their intention to declare a dividend of 7 per cent. on the preferred stock at the directors' meeting in July. This is equal to a full year's dividend on that issue.

CANADIAN PACIFIC RAILWAY

Lord Shaughnessy Reviews History of Road—Company Has Spent Much for Immigration

The annual meeting of the Canadian Pacific Railway Company was held in Montreal on May 1, and the report of operations for the year ended December 31, 1917, was presented. The chairman also supplemented the report by a review of the company's financial policy and progress up to the present time.

The contract made in 1880 between the syndicate and the government of Canada, provided for a grant to the company, in addition to the uncompleted sections of the road, of $25,000,000 in cash, and 25,000,000 acres of land. A few years afterwards it was found necessary to issue $35,000,000 of 5 per cent. first mortgage bonds, and $65,000,000 of ordinary stock, the latter yielding to the company only about 46 per cent. of its face value. As late as 1895, after several years of operation of the road, shares were sold in the market at 33.

The Companies' Lands.

The land grant was treated at some length by the chairman. For many years it was a drag on the company's development. Interest had to be met on $15,000,000 of bonds which had been issued on this security, and land sales were disappointing, in spite of millions spent in encouraging immigration. The prices were at first necessarily low, sometimes only $1.50 per acre.

Policy of the Management.

Up to date, 14,000,000 acres of the original land grant have been sold, yielding approximately $94,000,000, or an average of $6.72 per acre. After deducting the expenditure on immigration, etc., the net return is less than $5 per acre.

Lord Shaughnessy also pointed out that the prudent and conservative policy of the directors had limited the dividend rate to 10 per cent. While the capital of the company is $623,000,000, the system represents an outlay of $818,000,000 altogether, or $61,000 per mile. The conservative policy of the directors is illustrated by the fact that the net earnings per mile required to meet the annual interest charges on the Grand Trunk, Canadian Northern, Grand Trunk Pacific and National Transcontinental, would cover the annual interest charges, dividends on the preference stock, and 7 per cent. on the common stock of the Canadian Pacific.

Extraneous investments, such as steamship lines, unsold lines, coal mining and other properties, were appraised at $253,000,000. This, the chairman said, was substantially below the market value.

ST. THOMAS STREET RAILWAY

At a meeting of the city council at St. Thomas, held on May 1st, it was suggested that the operation of the street railway be given up for the time being. The road has been run by hydro-electric power, and recently the demands on this power have been more than the supply. Many of the factories have been using steam power to some extent. As the population of St. Thomas is just about 16,000, the street railway can be given up without any serious handicap.

TRUST & GUARANTEE CO. TO HANDLE SYNOD OF HURON FUNDS

A meeting of the executive committee of the Diocese of Huron, was held on Monday in London, Ont., to consider the administration of the funds for the next five years. Tenders were received from eight institutions as follows:—

Trust and Guarantee Company, Charter Trust and Guarantee Company, Sterling Trust Corporation, Western Canada Bond Company, National Trust Company, Huron and Erie Loan and Savings Company, Canada Trust Company, Bond and Debenture Company and Fidelity and Trust Company. The tender of the first mentioned, offering a rate of 6 3-10 per cent., was accepted, being the most favorable. The Trust and Guarantee Company has handled the business of the Synod for the past ten years, and will, therefore, have charge of the funds, which total about $600,000, for the next five years.

ALBERTA CROP ACREAGE

Mr. J. D. McGregor, Member of Food Board, Discusses Question With Lethbridge Board of Trade

"On North America and particularly on Canada depends the food situation of the allies. It is our ability to produce and our proximity to the allied armies that places us in such a strategic position. And there is no place in the world where production can be so rapidly increased as in Canada, and no place in Canada where such a great percentage of increase can be obtained as south of the main line of the Canadian Pacific Railway in Alberta."

This remarkable statement was made to the general meeting of the Lethbridge board of trade on April 23rd by J. D. McGregor, one of the three members of the Canada food control board. It brought applause from the members of the board who were present, and it amounts to an exhortation to the farmers of Southern Alberta to lead the way in production of food stuffs for the allies that the war may be won. Mr. McGregor said he knew what he was talking about when he talked of Southern Alberta's ability to produce, for he is a farmer himself and he has farmed in Southern Alberta.

Mr. McGregor dealt first with his connection with the board. Mr. Hanna, when food controller, had called him to Ottawa to organize the campaign for greater hog production. At first he was inclined to look at the whole food control programme as if it were more or less of a joke, but on reading secret telegrams from Lord Rhondda, British food controller, he saw that he was mistaken. He saw that a shortage of bacon, one of the most-needed foods at the front, was threatened, and he took hold, with the result that eastern Canada was organized right down to the township lines within a few days, while the west was well organized shortly afterwards. He said the farmers were more than willing to feed high-priced grain to hogs when they learned the need. He then told of the difficulties surrounding the commercial side of the enterprise. The bacon produced must be taken away. In this connection he said Canada had been much more successful than the United States, owing chiefly to the fact that the Canadian railways had never once failed to deliver goods to the seaboard when ships were available. In the United States there was a surplus of bacon because the railways had not accomplished this. It was a great tribute to the Canadian railways. Answering the question why the use of bacon in Canada was not stopped altogether, he said there was no need for hysteria. If the bacon were all needed, its use by Canadians would be stopped, but there is always a certain amount of what is called domestic bacon, which it would be unprofitable to ship, and this must be used at home. "If the people of Canada will live up to the regulations now in force there will be no need to go further at present."

School and Indian Reserve Lands.

At a preceding meeting the board had unanimously decided that the government should do something to prevent school and Indian reserve land, which may be marketed in future, from falling into the hands of speculators. It was thought that the government should require the cultivation of at least a portion of the land sold to each party within a reasonable time after purchase. The matter was taken up with the United Farmers of Alberta, and the suggestion met with hearty approval of the executive. This question again came up for discussion, with the result that the following memorandum was passed and will be sent to Premier Borden and ministers of the Crown, to provincial premiers and ministers and to other organizations interested:

It is desirable that school lands and Indian reserve lands sold to the public should be placed under cultivation within reasonable periods after sale.

If this is not arranged for, the governments may actually become parties to the very reprehensible condition of maintaining such lands out of cultivation, and yet outside of governmental control.

A striking instance of the evil resulting from such a condition is that disclosed by the fact that considerable areas of land at Chin, near Lethbridge, had to be excluded from a desirable project for extending the added benefits that irrigation water brings towards mixed farming in the areas of light rainfall in the southern parts of Alberta and Saskatchewan. Auction sales of these school lands near Chin were made in 1909. In 1915 it was found that, on the areas that would have fallen under the Taber Irrigation District as then proposed, the amount that had been paid in principal was only some $20,000 while the accrued interest alone had mounted up to some $27,000. The title to the lands remained, of course, with the school lands authorities, but neither they nor the ostensible owners had proper authority to deal with the lands; and, in consequence, not only were these lands precluded from sharing in the proposed extension of irrigation facilities, but the whole plan for the district was held in abeyance.

It was suggested that the Dominion government should immediately take steps to ensure that the sale conditions of school lands and Indian reserve lands should require as essential conditions that certain acreages of such lands sold shall be put under cultivation within certain specified times, and requiring otherwise that such sales may be cancelled.

Conditions requiring actual residence on the lands might also be included, it was added.

GERMAN WAR FINANCE

The subscription books for the Eighth German War Loan closed on the 18th April. The objective was 15,000,000,000 marks, or $3,570,000,000, while the amount subscribed was 14,550,000,000 marks, or $3,462,900,000. There were also certain small subscriptions not reported at the time this announcement was made, and conversions of previous loans, so that the total will no doubt be easily reached.

The total reached by war loans is now 87,321,600,900 marks, or $20,782,541,013. The war credits voted in the Reichstag amount to almost thirty billion dollars, the difference having been made up by floating indebtedness in various forms. As the German Empire was almost free of debt in 1914, this may be regarded as the total of her national liabilities. The annual interest charge involved is about $1,500,000,000, and when amortization, pensions, and other legacies of the war are added, the annual expenses will be much larger. The savings of the German people in the year 1912, which was a prosperous year in Germany, amounted to about $2,000,000,000; it would appear, therefore, that all of the savings of the nation will be required to maintain the national debt, and make some provision for repaying it.

INDUSTRIAL PREPARATION IN UNITED STATES

Has Benefited by Experience of Other Nations—Fallacy of "Business as Usual" Realized

Mr. Harold G. Moulton, of Chicago, deals with the industrial situation of the United States in a recent booklet entitled "Unusual Business not Business as Usual," published by the Union League Club of Chicago. He considers the question whether the necessary supplies can be secured by merely speeding up production in existing factories and workshops, or if the character of industry must be transformed, the non-essential eliminated and productive energy diverted more largely into war channels.

"When the war began," he said, "it was generally assumed that the first of these alternatives would be adequate to meet the requirements of the situation. We assumed that the production of war supplies could be undertaken as an extra—that we could speed up our factories and our workers sufficiently to meet all war demands. We did not understand how utterly insatiable are the demands of modern warfare. The notion that war production can be carried as an extra is, however, no longer held in government circles. It is now conceded that we must resort to the second method.

What the Government is Planning.

"The government of the United States is, as already indicated, now fully aware of the necessity of such an industrial mobilization. It is important, therefore, that we all understand what developments are in store for us, to the end that we may co-operate in fullest measure with the government in its efforts.

"First, the government is urging us to save as never before; and to save with a view to the elimination of non-essential industries.

"But the government is not to rely exclusively on voluntary saving as a means of bringing about industrial changes. It is also developing agencies of central control. In September, a priority committee was established in Washington with power to decide what industries should be given prior claims in the matter of raw materials. This committee has drawn up a classification, as follows: Class A comprises war work. That is to say, orders and work urgently necessary in carrying on the war, such as arms, ammunition, ships, etc., and the materials required in the manufacture of same. Class B comprises orders and work which, while not primarily designed for the prosecution of the war, yet are of public interest and essential to the national welfare, or otherwise of exceptional importance. Class C comprises all orders and work not embraced in Class A or Class B.

"There are various subdivisions of these classes, indicated by a suffix number, thus: A1, A2, etc., B1, B2, etc.

"All orders and work in Class A shall take precedence over those in Class B, and those in Class B shall take precedence over those in Class C.

"When rigidly applied to such fundamental materials as iron, it will be readily seen that this priority system reaches into nearly every branch of industry, and that people who wish iron and steel for ordinary industrial requirements will be forced to wait—and wait indefinitely, since the demands of the war industries are certain to be simply insatiable.

Business Readjustment.

"The task of bringing about the necessary reorganization with the minimum of loss and suffering is so tremendous that the machinery for its accomplishment is as yet far from being perfected. While the details cannot be given in this paper, it is generally known that the government is now developing the machinery for transferring laborers with a minimum of loss or suffering to the jobs in war industries for which they are adapted. Plans are also being matured which will provide for adequate housing facilities in the vicinity of war industries. Various financial policies are also being worked out which will insure that investments shall be diverted from the non-essential industries, and that businesses which transfer to war work will be given adequate financial support and a guaranty of adequate profits.

"It should be added here that the rapidity with which this readjusting may be accomplished largely depends upon the developments in shipping. The materials and supplies for war must pass through a narrow-necked bottle on the way to Europe, and the rate at which this neck expands will determine the rate at which we can effectively mobilize our resources for war purposes. Now, to increase our shipping capacity as rapidly as is required involves not only speeding up the work in existing yards, but also enlarging our shipbuilding facilities by diverting labor and capital from less essential work. It means that parts of ships must be manufactured by industrial plants wherever readjustment for such work is practicable. It means, further, that imports and exports of non-essentials must be curtailed in many instances to the end that tonnage may be released for war business. And the restrictions of these imports and exports in turn necessitates readjustments in the domestic industries dependant upon such trade; the labor and capital employed in such industries must be diverted to the production of forms of war materials to which they may be adapted. In short, the problem before us is nothing less than the organizing of all the productive resources of the United States of America with a single end in view—that of building a bridge of ships across the Atlantic and sending across that bridge in minimum time a maximum of troops and supplies. The task we are undertaking is thus one gigantic business proposition, in comparison with which the largest individual business ever known is utterly insignificant. To carry such a stupendous task to successful completion will require not only the best organizing ability the nation possesses, but infinite patience and willing self-sacrifice on the part of those whose ordinary occupations are inevitably to be disarranged.

Effect of Campaign for Saving.

"It goes without saying that American business men are anxious to assist in every possible way in effecting these industrial readjustments with a minimum of loss. Patriotic impulse alone will lead every American business man to do his part. He merely needs to be shown how he can help most efficiently. But quite apart from patriotism or the possibility of a curtailment of raw materials or transportation facilities, there is another reason which should lead business men to make readjustments wherever possible just as quickly as they can. It is inevitable that the non-essential industries will shortly have greatly reduced sales; indeed, in many cases there is already a serious falling off in sales. The reasons why this is inevitable may be briefly indicated.

"In the first place the perfect barrage fire of argument as to the necessity of saving that has been hurled at the American public in recent months is bearing fruit. It is now regarded as unpatriotic not to save as never before in our history.

"In the second place it is impossible for the rank and file of the American people to buy Liberty bonds and spend as usual. If they buy bonds it must be at the sacrifice of accustomed luxuries. Moreover, we are now looking forward to the payment of taxes, and we are making our preparations for this by economizing in our normal purchases. It must be borne in mind in this connection, also, that at a time when the future is so uncertain a great many people are saying: 'I had better save all I can now, because there is no telling whether it will be possible for me to save anything in the next few years.'

"Finally, it must be noted that the rapid rise of prices in nearly every line is forcing rigid economy among the masses. Statistics just published by the government show that retail prices of foodstuffs in the United States are now 57 per cent. higher than they were in 1914, while general wholesale prices are 81 per cent. higher. Students of the question are unanimous in the belief that prices will continue to rise here throughout the war, just as they have in the nations of Europe. It will, therefore, shortly be impossible for the masses of our people to devote much of their earnings to the purchase of non-essentials. They will count themselves fortunate if they are able to purchase enough of the necessities of life to sustain themselves in a state of normal efficiency. Already in many cases the pinch of war prices is beginning to mean real privation.

The Constructive Side.

"In the light of the situation which we have been discussing it is obviously imperative that business be readjusted to a war basis wherever practicable and as soon as possible. The great problem is, How? There are two attitudes which business men may assume. One is that of 'watchful waiting'; the other that of active and constructive effort directed toward conversion of their plants to war manufacture. The former leads to bankruptcy and to neglected opportunity for service to the government; the latter is the avenue to participation in profits and to effective assistance to the nation in its hour of need. A large number of concerns have already been forehanded enough to divert a portion of their plants to war work; and it is hoped that the facts about these may soon be made generally available. In the meanwhile, it may

The Secret of a Wonderful Success

The rise and progress of The Mutual Life of Canada has been one of the romances in the history of Canadian Finance. Less than half-a-century ago a small group of men in an obscure Ontario town determined to establish a Life Insurance Company that would give the public the maximum of service at a minimum of cost. That being the aim it was resolved that the organization should be purely mutual. Five hundred prospective policyholders were gathered and formrd the nucleus of the Company. From this small beginning in 1870 the Company has gone forward steadily with more regard to security and mutual serviceableness than big business. The result is that the Company to-day is enjoying a popularity that is phenomenal, writing during the past year more than $20,000,000 paid for assurances.

EDUCATIVE LITERATURE

There is no department of finance of such importance to the average man as Life Insurance, and none, generally speaking, of which he knows less.

To those wishing to investigate the possibilities of Life Insurance, the extraordinarily liberal provisions of modern Policies, the CERTAINTY of the protection afforded, the comparative advantages of various Plans, the value of Insurance as an investment, and so forth, The Great-West Life Assurance Company will be pleased to send fully explanatory pamphlets in which the various phases of Life Insurance are clearly referred to. The Company will, at the same time, be pleased to give personal advice and information, and these explanations will be none the less freely given though the applicant has no immediate intention of insuring.

The Great-West Policies are widely known for their liberality and value. Rates are low, and the profit returns to Policyholders remarkably high.

ARTHUR L. BATES, PRESIDENT HENRI E. MORIN, SUPERVISOR

For Agencies in the Western Division, Province of Quebec and Eastern Ontario, apply to WALTER I. JOSEPH, Manager, 502 McGill Building, Montreal.

For Agencies in Western Ontario, apply to E. J. ATKINSON, Manager, 107 Manning Chambers, 72 Queen St. West, Toronto

prove suggestive to present here a very brief statement of some of the adjustments that have been made in England. Instead of gramophones, the gramaphone company now makes fuses and delicate shell parts; instead of cloth for ordinary clothes, the woolen factory makes khaki; instead of motor cars, the motor-car maker makes shells; glaziers make cartridge clips; music-roll plants make gauges; infant-food plants make plugs for shells; advertising agencies make shell adapters; watchmakers adjust fuses; baking-machinery plants make six-inch high-explosive shells; jewelry houses make periscopes; cream-separator factories make shell primers; and textile machinery firms make field kitchens.

"The outstanding need of the time is for the managers and staffs of technical experts in non-war industries everywhere to be studying the problem with the greatest care in order to discover in what ways their plants may be adapted to war production. They should, moreover, actively co-operate with the agencies in Washington, which, under the appointment or approval of the government, are wrestling with the problem of industrial readjustments. On the manufacturing side there is the Bureau of Manufacturing Resources of the Council of National Defence, which is giving its attention to the problem of plant conversion. On the commercial side there is the Commercial Economy Board of the Council of National Defence, which 'has undertaken to co-operate with business men. . . in eliminating needless uses of men, materials, equipment and capital in all lines of commercial business.' Business men who desire to place themselves in line with this movement may very properly enter into correspondence with these agencies. Such correspondence may well have the double result of proving helpful both to the business interests and to the governmental committees themselves. There is opportunity here for some really constructive co-operation.

"I think it is not putting it too strongly to say that the outcome of the greatest struggle in history for the rights of a common humanity very largely depends upon the rapidity and the effectiveness with which American business rises to the task before it."

Mr. Robert Meek, secretary of the Oddfellows' Relief Association, died in Kingston on Wednesday, the 1st inst. For many years he was connected with papers in Kingston, Belleville and St. Catharines, and was for some time editor-in-chief of the "Kingston Whig."

RADICAL TAX REFORM

To make the state the only landlords, and allow the land to be taken by those who desire it, and in return to charge them a rental to cover the social services of the state, was the statement Mr. Herman made to the Tax Reform League. He declared that such a measure would encourage thousands of people who are now in non-productive occupations to go back on the land, and would greatly stimulate food production. "The Great Adventure," as the movement is called, is a most radical tax reform measure which is being conducted in California. The speaker urged that one should not be taxed for what one did for one oneself, but only for such things as came from the community. If the project carried and was successful in California, he had great hopes for its general adoption.

The plan was voted on at the last election, and while defeated, received over 360,000 votes. Strong opposition was encountered from the millionaire landowners, who had banded themselves together in a strong anti-single-tax association.

INCREASE IN HOUSE RENTS

Following upon the fixing of Toronto's tax rate at over thirty mills, numerous cases of rental increases have been reported, sometimes exceeding the increase in the taxes on the property. Co-incident with the rise in taxes is the scarcity of houses. Population has continued to flow into Toronto, and the rise of prices has made the building of new houses almost prohibitive. The result has been congestion, and scarcity of houses for rent, although many are available for purchase. Landlords have been availing themselves of the opportunity afforded by the increase in the tax rate, to raise their rents, and it is claimed that hardship has been the result in many cases.

The rise in rents has accordingly been attributed to the higher taxes. The fact is overlooked that quite apart from the increased expenses falling on property owners, the general rise in interest rates would entitle them to raise their rents, so as to maintain the relative position of returns upon investments in real estate.

As a matter of fact, however, neither of these factors is the one which determines rental values. It is rather the fact previously referred to, that the demand for dwellings is considerably in excess of the supply. Custom necessarily has much influence in preventing changes in rentals, and they have not advanced in proportion to market condition. The effect of the increase in taxes is merely to awaken property owners to the necessity of obtaining the highest possible yield from their investments, and the prudent landlord will not fix his price so high as to preclude renting. That hardship should result in some cases is inevitable, and while in individual cases the owner may have been over-zealous, generally speaking, the blame is not to be placed on the shoulders of the landlord, who is being pinched between the millstones, and as the tax rate is beyond his individual power, he naturally turns to the other direction for relief.

As regards the cases where the rents were raised by more than the increase in taxes, the indication seems to be that, generally speaking, the rates have been too low in the past. The owner endeavors to obtain the highest price he can, and no tenant need expect for long to occupy premises at a less rental than might be obtained by re-letting.

If this is the case, how is it that houses may be purchased without much difficulty? In the first place it must be remembered that the prices are just as high and in fact higher than formerly. Then, as interest rates have risen, and from 5½ per cent. to 7 per cent. may be secured on good investments in securities, the property owner naturally feels inclined to transfer his investment unless he can obtain a corresponding increase in the return from his property. The probability of still further increases in taxation is also being discounted, and there is not much desire apparent, to sink money in real estate as an investment.

The movement has not been so accentuated in other cities, as, generally speaking, tax rates have not been subject to such a sudden increase as has been the case in Toronto. There is no doubt, however, that the phenomenon is fairly general. The remedy seems to be still further economy in space, and the holding down of this item in the family budget at least to its present level: there is no prospect of early relief in the way of new construction, although it is possible that the high cost of living in the cities may force population to the towns, villages, and rural districts.

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

ENORMOUS FIRE LOSS

Provincial Inspectors Should Be Appointed—Regulations for Overtime Work—Too Much Over-insurance

The sittings of the Fire Insurance Commission were resumed this week and much new evidence presented. Monday's session was chiefly devoted to the question of fire prevention. Mr. E. P. Heaton, provincial fire marshal, said that the municipalities should enforce by-laws dealing with general fire protection, and the removal of rubbish and litter, the inspection of stove pipes, the safe storage of gasoline and regular and systematic inspection of fire fighting equipment. Mr. Heaton also recommended that a number of field men or inspectors be appointed to visit the municipalities of the province and induce them to enforce the by-laws which they have the power to pass.

Manufacturers Bear Over Time Risk.

Mr. F. W. Wegenast, on behalf of the Canadian Manufacturers' Association, asked the commission to investigate the proposed action of the Canadian Fire Underwriters' Association, in raising the premium rates of manufactures who worked overtime from 10 p.m. to 5 a.m. The result, he pointed out, was that if a fire broke out at five minutes after ten, the manufacturer would lose his insurance.

Heavy Fire Losses.

In 1917 the total loss was $10,365,539, caused by 9,601 fires. The insurance loss was $7,897,447, and the loss not covered by insurance was $2,468,092. In the first three months for 1918 the loss was $3,194,300 from 2,583 fires, insurance loss $2,624,318, and loss not covered by insurance $559,992. In 1917 the loss had been $4 per capita, while $3 was considered an excessive amount. "It is usually thought that the continuance of such a strain means bankruptcy," said the fire marshal.

In the last six months there had been 3,835 fires. Of this number, 2,167, or 56 per cent., he said were due to the following fire causes: Chimneys, lightning, matches, smoking and stoves and furnaces. Ten per cent., or 435 fires, causing a loss of $100,000, had been due to matches, and Mr. Heaton recommended that no matches should be allowed to be used, except safety matches which could only be struck on match-boxes.

Over Insurance Blamed for Fires.

Mr. G. F. Lewis, deputy fire marshal, said that there were too many agents in the field for the amount of insurance available, and that there should be some method of ascertaining the actual value of the property that was insured, in order that it would not be over-insured. There were, he stated, many cases near Hamilton and Niagara, of shacks being erected, over-insured, and then burnt.

An extensive report, prepared by Mr. John A Robertson, secretary of the Canadian Fire Underwriters' Association, was also submitted. According to this report, the losses in peace times in Europe, usually run from 5 per cent. to 20 per cent. of the losses in this country. The figures are: For Canada, $3.58 per capita; United States, $2.32; England, 67 cents; France, 63 cents; Germany, 17 cents; Ireland, 39 cents; Italy, 37 cents; Norway, 48 cents; Spain, 15 cents; and Sweden, 54 cents. The amount of property destroyed in the United States and Canada each year, according to Mr. Robertson's report, is estimated at $250,000,000, of which Canada's share ranges from $20,000,000 to $25,000,000.

With regard to any suggestions, Mr. Robertson refers to a regular inspection of all mercantile and manufacturing buildings, electrical inspections by some independent body, the danger of shingle roofs, prohibition of the sale of any kind but safety matches, and the education of children.

Press Influence.

"The press, also our great educative force, does not seem to have grappled with this problem of fire waste," stated the report. "In the daily papers there is occasionally a perfunctory reference to insurance matters, but generally their remarks bear heaviest upon the iniquities of insurance companies in insisting that they must be paid for the risks they run. Even those professing to guide the public on these matters and who frequently furnish valuable information bearing on insurance questions, appear unable to see any further into the subject than the interest of the man who has had a fire. It is little wonder, therefore, if the patient public, which looks to the legislature, the courts and the press for guidance, is misled and fails to appreciate that every loss by fire is a loss to itself and for which it must pay."

NEW BRANCH BANK OF HAMILTON

The Bank of Hamilton expects to open within the next few days a branch in Winnipeg, which will be known as the Portage and Garry branch. It will be under the management of Mr. G. V. Pearce, formerly manager at Port Arthur, and will be in the quarters which have been occupied temporarily by the main office while alterations to the main Winnipeg building were being made.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	1 19-32	1⅝	....
Mont. funds	par	par	⅛ to ¼
Sterling—			
Demand	$4.83	$4.83.25	$4.85½
Cable transfers	$4.84	$4.84.25	$4.84½

Rate in New York, sterling demand, $4.75 1-16.
Bank of England rate, 5 per cent.

PRICE INVESTIGATIONS ARE EFFECTIVE

Mr. W. F. O'Connor, K.C., late High Cost of Living Commissioner for Canada, in addressing the Toronto Press Club recently, stated that the effect of the investigations of the department would be a saving of $15,000,000 a year, and that this effect would last for at least ten years. This does not include the amount saved by the prevention of abnormal inflation of prices. Of 110 cold storage businesses which Mr. O'Connor and his staff have investigated, he found that there were only three upon which he could place the stamp of respectability.

BUILDING OWNERS & MANAGERS' ASSOCIATION OF ONTARIO

At a meeting held recently in the Excelsior Life Building, the managers of the leading down-town office buildings formed an association, the members of which are to be the owners or those engaged in the management of buildings in Ontario. The objects as set forth in the constitution are the mutual benefits to be derived from the corporation and association of members, and the advantages to be secured through the exchange of ideas, and the discussion of matters of interest in the construction, maintenance and operation of buildings, including legislation, taxation and insurance. The officers for the first year have been elected as follows: Chas. P. Muckle, Excelsior Life Building, president; G. A. Hodgson, superintendent of property, Dovercourt Land and Savings Company, first vice-president; F. A. Kent, Kent Building, second vice-president; W. C. Dawson, Royal Bank Building, secretary-treasurer.

DRYDOCK IDLE

The concluding session at Prince Rupert of the International Fisheries Commission was held on Wednesday, the 1st inst., the commissioners leaving shortly afterwards for Ketchikan.

The assertion made in Seattle that the Booth Fishing Company had been refused a cold-storage site in Prince Rupert was denied by the Grand Trunk Pacific, who said the company had been given every opportunity to secure a site.

Hon. J. D. Hazen, in adjourning the sessions, said he had been through the drydock and was astonished to realize that such a huge and finely equipped plant was not running at full blast. He could say nothing then about building of ships, but on his return to Ottawa, he would at once take up with the chairman of the Munitions Board and the ministers the necessity of immediately operating the big machine shops of the plant in turning out badly needed war munitions.

Secretary of Commerce Redfield, of the United States, spoke briefly, emphasizing the fact that the interests of the Americans and Canadians were mutual.

The Government and the Canadian Railways

Review of Relations of Government With Canadian Roads—The Railway Commission Report—Neither Majority nor Minority Report Acted Upon — General Favor Towards Government Ownership.

By **W. T. JACKMAN, M.A.**

APART from the prosecution of the war with vigor and determination, there is probably no issue so important for the welfare of the country as the proper solution of the present railway problem. The railways are so intimately related to all aspects of the nation's life that the well-being of all classes is affected vitally by the immediate and final steps taken by the government in connection with them. Upon the wisdom and impartial judgment of legislators in dealing with the railways will depend the progress which Canada is to make in the future, both in economic advance and in social amelioration. A false step taken now and perpetuated for years to come would mean the imposition of a barrier to the development of the country which could not be overcome even by the enterprise and initiative of the people; and it is only as the people are aided adequately by such agencies as the railways that they can give effect to their spirit and determination to build up a great nation with the help of our abundant natural resources. But if the channels of expansion, both extensive and intensive, should be obstructed by a system of transportation which did not readily respond to the growth of industry and trade, progress would be hampered inevitably by the organized impediment of an element which did not accord with the onward advance. It is within the power of the government, by acting upon an enlightened and intelligent view of the subject with reference to the long-time results, to aid in the upbuilding of the country; and, on the contrary, by acting upon the advice of political favorites or certain financial interests, or by surrendering judgment to the expediency of votes, it may embark upon a policy which would stifle the national growth.

What is the situation with which the government has to deal? The immediate issue is concerned with the financial condition of all the railways except the Canadian Pacific. In the years preceding the war, Canada was enjoying a period of abounding prosperity and the whole atmosphere was surcharged with this exuberance. The great western provinces were going ahead with unexampled success, and population was entering upon the prairie agricultural lands in great numbers. For some years, real estate was subject to an intense boom. Villages, towns and cities were springing up with almost fabulous rapidity, and property values were greatly inflated. With such a high wave of apparent prosperity, both East and West shared in the view that a great future awaited the country. The increase of the agricultural products was alone taxing unduly the facilities of the existing railways, and it is no wonder that the railway companies, in the face of such unparalleled expansion of traffic, saw the necessity of adding largely to their mileage and their equipment. The Canadian Pacific had already a fairly complete network of lines in these western provinces as well as in the east; and its roadway and equipment, including its terminals, were being improved and increased as fast as this could be effected by its efficient management.

Another network of roadway had come into operation in the West under the Canadian Northern Railway Company's management. It, too, had been expanding rapidly, with the object of caring for the increasing volume of business that was offered by the prosperous communities in that section of the country; but in order to become most successful this railway system found it necessary to get communication with a port on the Pacific and to get access to the important commercial cities of the east, including an Atlantic port. Accordingly, it entered upon the ambitious scheme of becoming a second transcontinental line, by constructing its road through British Columbia to Vancouver and by building from Winnipeg eastward to Montreal, with the erection of suitable terminal facilities for the growing traffic. In 1913 the federal government granted the company a subsidy and in 1914 the officials, then in need of more funds for the completion of the lines and terminals of the road, presented their case to the Dominion government and asked the latter to guarantee the company's bonds. The government acceded to this request up to the amount of $45,000,000 of bonds, upon receiving in return $40,000,000 of the company's stock and upon the assurance that the returns from the sale of these bonds together with the funds which the company had already available would be sufficient to complete the enterprise. But the unforeseen conditions and depression due to the war upset the company's calculations; its revenues were not large enough to meet its fixed charges and provide for betterments and increased equipment; and in the year 1916 it was necessary for the government to come again to its assistance and make a contribution to keep the company from defaulting in its interest payments and thus prevent it from going into a receivership.

The position of the Grand Trunk and its subsidiary, the Grand Trunk Pacific, also demands attention. The former has a good system of lines and facilities in the older part of the Dominion and its through line from Portland, Maine, to Chicago is one of the best on the continent. But up to 1903 it had no means of tapping the growing traffic of the western provinces, and as it was unable to secure an amalgamation with the Canadian Northern, which had several thousand miles of lines in the West, it began to think of constructing its own western connections from North Bay to the Pacific. The scheme was put before parliament and in its final form provision was made, contrary to the desire of the Grand Trunk management, for a through route from Moncton to Prince Rupert. The Dominion government was to construct the eastern division of this through route from Winnipeg to Moncton, according to specifications approved by the Grand Trunk Railway Company. Aided by bond guarantees of the latter and the Dominion government, the Grand Trunk Pacific Railway Company was to construct the western division from Winnipeg to Prince Rupert and then take over the operation of the eastern division, at an annual rental of 3 per cent. of its cost of construction. It was estimated that the section east of Winnipeg, now called the National Transcontinental, should cost $61,415,000, but when its actual cost reached $159,881,197 the Grand Trunk Pacific refused to accept the burden of operation. The Government accepted the company's refusal and took over the operation of the line, thus adding the National Transcontinental to the other government railways. But even without this part of the line, the Grand Trunk Pacific Railway Company is embarrassed financially. Its line has been put through new territory which has not yet been developed to the point of yielding the large traffic that is furnished to the Canadian Pacific Railway and the Canadian Northern Railway farther south; it has, besides, few branches and no feeders; consequently, its revenue is insufficient to meet its operating expenses, to say nothing of its requirements for betterments, additional rolling stock and interest on its underlying securities. The total interest charges of the company amount to approximately nine million dollars, and of this sum the parent Grand Trunk Railway Company, by guaranteeing the bonds of its subsidiary, becomes responsible for an amount considerably in excess of five million dollars. The Grand Trunk is unable to meet the large deficit of the Grand Trunk Pacific and the latter, in order to continue as a going concern, has had to receive assistance from the Dominion government to the extent of $15,500,000 during the two years beginning January 1st, 1916, when the line was declared officially in operation. The Grand Trunk officials aver that the inability of the Grand Trunk Pacific to pay its way is not due to any fault of theirs, "but can be attributed directly to the action of the government in subsidizing competing lines" belonging to the Canadian Northern Railway "and in many ways enormously adding to the cost of construction." They claim that the Grand Trunk Railway Company's money was put into the subsidiary "in good faith, in the belief that the Grand Trunk Pacific was largely a national undertaking. . . . There is not a shadow of doubt that had the course subsequently followed by the government (*i.e.*, in subsidizing competing lines) been known when application for the Grand Trunk Pacific charter was made, that road would never have been built." The Grand Trunk Railway Company, therefore, proposed, in a letter to Premier Borden dated December 10th, 1915, that they should retire altogether from the concern; that in return for their handing over to the government the $25,000,000 of common stock of the Grand Trunk Pacific Railway which they hold, but for which they paid only a nominal amount of cash, the government should not only relieve them of all liability in connection with the Grand Trunk Pacific and its subsidiaries, including deficits in operating expenses, but should "repay the Grand Trunk Railway Company any money advanced to the Grand Trunk Pacific or its . . . subsidiary companies."

These, then, are the facts concerning the three great railway systems of the Dominion which are in the hands of private companies. The Canadian Pacific is one of the world's strongest companies. It received generous aid from the government in its initial years until it could stand alone; and yet it is acknowledged by high authorities outside the company that the people have received from this enterprise "good value for their money."

The Canadian Northern also received aid in land and subsidies, but this direct assistance was very small in comparison with that given to the Canadian Pacific. Besides, large amounts of securities of the company were guaranteed by the Dominion and the provinces; but up to 1914 it apparently met all its obligations from its own resources. No dividends have been paid on its stock.

The Grand Trunk Pacific, too, received direct aid, in the form of subsidies, to a considerable extent, but it relied chiefly on the guarantees by the governments and the parent Grand Trunk.

The Grand Trunk Railway Company, on the other hand, came into existence almost entirely as a result of the investment of private capital. It has always met its obligations to its own shareholders and bondholders, although the shareholders' return on their capital has been very small. Its difficulties came when it reached out toward the West and agreed, even though unwillingly, to the government's plan for a through line from the Pacific to the Atlantic. Whether or not there be strong ground for the plea of the directorate that the Grand Trunk should be relieved of all responsibility for the Grand Trunk Pacific, as outlined above, we forbear to express a final opinion. It would seem from the evidence as if in this matter the Grand Trunk had unwittingly made a bad bargain, without full consideration of the possible results of its agreement with the government, and now desired to withdraw from the agreement; but it may be that complete evidence has not yet been brought forth and that further elucidation from other sources may strengthen the company's claim.

From the foregoing, it will be seen that the chief trouble with the railways, other than the Canadian Pacific, is the financial burden which each has to bear.

The Royal Commission of 1916.

The Royal Commission appointed in 1916 to inquire into the general problem of transportation in Canada with the object of finding a remedy for the existing difficulties handed the government its report last year. This is really two reports, the majority signed by Sir Henry Drayton and Mr. Acworth, and the minority by President Smith of the New York Central.

The majority report recommended that the Canadian Pacific be left as it is, since "it is in the interest of the country that this company should be rich and prosperous," in order to give the best service and to meet new developments as they arise. But the other three companies, the Canadian Northern, the Grand Trunk and the Grand Trunk Pacific, were reported as having "broken down" and the two commissioners saw "no way to organize new companies to take their place." Consequently, they recommended that a board of trustees be constituted by act of parliament and incorporated as "The Dominion

Railway Company," and that the ownership of the Canadian Northern, Grand Trunk and Grand Trunk Pacific be vested in this company. Their suggestion was that the government should assume responsibility for the existing securities of these three companies. The two government lines, the Intercolonial and the National Transcontinental, should also be handed over to the Dominion Railway Company and the five systems thus merged should be operated by this company as one united group. But these recommendations were made only upon the express condition that this board of trustees should be a "permanent, self-perpetuating body" and "should not assume, or even be suspected of assuming, a political complexion." To this the commissioners attached "extreme importance," so that the board might not be hampered in any way by political considerations. At the same time, the Dominion Railway Company should be subject to the jurisdiction of the Board of Railway Commissioners in the same way and to the same extent as any private railway company.

President Smith's Minority Report.

The minority report, which in so many instances comes nearer to the finality of the problem, seems in this case to have been dismissed with but little consideration; but we cannot allow it to be relegated to the public rubbish heap in this summary fashion, for it contains too much that is valuable and vitally pertinent to a proper solution of the railway question. President Smith is a man whose knowledge of railway affairs, gained in connection with one of the greatest of the railway systems in the United States, is broad and thorough; he is a railway statesman of a very high order, whose viewpoint is not narrowed by any sectional interests nor obscured by merely local patriotism. His position in the most important place under the railway administration of the neighboring republic is an attestation of his ability in the organization of transportation service for the public welfare. His report upon the Canadian railway situation is a masterly analysis. He recognizes that, while public aid to railways had been founded originally on the urgent need for transportation to open up and develop the resources of a new country and to unify Canada commercially and politically, it was carried far beyond the limits warranted by the requirements. The responsibility for this is due as much to the government as to the private companies, since without enabling legislation and the extension of government credit, from which all received their essential support, the companies could not have expanded and overbuilt. This policy of developing the country was sound and fully justifiable, but the government should have exercised some supervision that would have insured to the people the benefits of that policy, without the losses that have followed the effort to assist development indiscriminately.

In view of these facts, President Smith would suggest that, while the Canadian Pacific should be allowed to go on unchanged in the important service it is rendering, certain changes should be made with regard to the other two great systems. The Canadian Northern's difficulty is largely due to its uncompleted condition and to its inability to secure the needed capital on its own resources, especially when so much capital is required by governments for the prosecution of the war. It has succeeded in building up a vast network of facilities in the West but was jeopardized by its expansion in the east. On the other hand, the Grand Trunk was successful in the east but signally failed in the west. From Winnipeg westward the Grand Trunk Pacific lines are found duplicating the successful Canadian Northern lines; and in the east the Canadian Northern lines and facilities duplicate those of the Grand Trunk proper. Between Winnipeg and North Bay, moreover, the Canadian Northern line parallels the government line, the National Transcontinental. Economy could be secured by eliminating this duplication of operation and causing the lines in these localities to be worked jointly. Consequently, the following remedies for the situation would appear to be desirable:—

"Let the Canadian Pacific alone; let the Grand Trunk operate the eastern lines now held by that company and the Canadian Northern; let the Canadian Northern operate the western lines now held by that company and the Grand Trunk Pacific system; let the government operate the connections or procure their operation by private companies; all of which should be done under arrangements that are equitable and yet look to the not distant day when the country will have survived the war and resumed its prosperous growth."

The Canadian Northern should be required to confine its operation to the country west of Winnipeg and to take over on a twenty-one-year lease the Grand Trunk Pacific lines at an annual rental equal to the fixed charges of the latter. On a similar lease, the Grand Trunk should take over the Canadian Northern lines east of North Bay at an annual rental equal to the fixed charges of this portion of the system. The lines between Winnipeg and North Bay, except the Canadian Pacific, should be leased for a like period to either the Canadian Northern or the Grand Trunk (or, if necessary, any other qualified company) on the best terms that can be made, so as to give the greatest service at the least cost. After ten years, these leases should be terminable by the government and companies at their option upon equitable terms.

In addition to these arrangements, Mr. Smith would also enlarge the authority of the Board of Railway Commissioners by giving that body power over all railways in regard to maximum and minimum rates, the issuance of securities, the building of new railways, or the extension of lines and other matters properly subject to governmental supervision. These changes should have been made years ago.

Neither Report Acted Upon.

With the majority and minority reports in hand, what course was undertaken by the government? Both were set aside. In the session of 1917 a bill was brought into parliament by the minister of finance providing for the acquisition of the Canadian Northern, but leaving the other lines in *statu quo*. The Grand Trunk Pacific was given a loan of $7,500,000 in order to enable that road to carry on its service and meet its fixed charges. The Grand Trunk, National Transcontinental and Intercolonial were left as before. It is strange that the Grand Trunk Pacific, which was unable to meet even its operating expenses, to say nothing of fixed charges, should have been treated in a different manner from the Canadian Northern, which was virtually in the same position in not being able to meet its fixed charges. Why should the former be left in private hands while the latter was to be taken over by the government? The answer to this query can only be surmised. In acquiring only the Canadian Northern, of course, it was stated that the government could not also take the Grand Trunk Pacific without a protracted period of negotiation with the Grand Trunk directors and shareholders in England; but the Drayton-Acworth report certainly did not contemplate the proposed piecemeal purchase. Moreover, these two commissioners had pointed out that the Canadian Northern shareholders had no equity in the company, either on the ground of cash put in, or on the ground of physical reproduction cost, or on the ground of the saleable value of the property as a going concern;

but when the government brought in its bill, the minister of finance said that there were certain assets which had not been accounted for in the Drayton-Acworth report and, therefore, the government's proposal was that the value of the remaining stock necessary to full control, amounting to $60,000,000—the other $40,000,000 having been handed over to the government in 1914 when the latter guaranteed the company's bond issue of $45,000,000—should be determined by a board of arbitration composed of three members, one appointed by the government, one by the Canadian Northern interests, and the third chosen by these two. Why should the method of arbitration have been adopted in this case when that method had long ago been rejected and subsequently all such valuations with reference to government claims had been determined by the judge of the Exchequer Court?

The only answer given by the government was that it was the method recommended by the Drayton-Acworth report; but a careful reading of that report shows that this was erroneous. The report says: "We suggest that, *if it is decided to permit the present shareholders to retain a portion of their holding*," there should be a board of arbitration empowered to decide two questions: First, "What proportion of the Canadian Northern common stock may fairly remain the property of the present holders?"; second, "What proportion of the earnings of the Dominion Railway Company may fairly be regarded as attributable to the Canadian Northern lines?" From this verbatim quotation, it is apparent that the government, despite its protestations, was not acting according to the suggestion of that report, since it had determined *not* to permit the shareholders to retain any portion of their stock. Why, then, did the government propose arbitration, rather than the determination of the value of the property of the railway company by Exchequer Court proceedings. To show how little confidence the government had in the process of arbitration and in the settlement of a fair value by the arbitrators, it is only necessary to remark that the highest value of the $60,000,000 of stock was fixed at an amount not to exceed $10,000,000. What may be the outcome of the arbitrators' decision I shall not venture to predict. One is impressed in reading the debates, as given in Hansard, with the apparent desire on the part of certain members of the late government to conceal facts which were asked for time and again. There was not that free and open exposition of the circumstances which was necessary in order that parliament might act judiciously upon a course which would add over $500,000,000 to the debt of Canada. There was the withholding of information upon which a proper conclusion could be reached concerning such an important issue. Even for the writer, who has carefully examined every vestige of evidence as presented in the debates of the House, there are many loose ends which are apparently irreconcilable. Finally, after the measure had been under discussion only a few days, the closure rule was applied; the government seemed to be in an extraordinarily great hurry to rush the bill through, without having given all the information that was desired, in order to put it upon the statute book before the light of day had been properly turned upon it. Such was the way in which the government handled this problem.*

No Lack of Support for Government Ownership.

No policy has yet been formulated concerning the country's railways as a whole, and I venture the opinion that had the matter of the Canadian Northern been left to the present Union Government a different solution would have been found. Many of the newspapers of the country are declaiming loudly against private railways; and their incessant and vociferous appeals, usually written by those who have never had any opportunity or ability to study the subject, are made to the public as if their statements were the last word. And, *mirabile dictu*, such is the calibre of one of the most aggressive members of the late and of the present Cabinet that he openly declared in the House, "I do not know any better way of forming the judgment of a public man than for him to study assiduously the editorial expressions of the press!" The farmers, largely influenced in their opinions by the bias of the newspapers and by the fascinating picture which has been placed before them as to the results of government ownership, have, in some instances, passed resolutions at their great gatherings urging the nationalization of all the railways as the only remedy which "will meet the conditions caused by the repeated blunders and extravagant railway policies of successive governments." And, strange to say, in making this last statement they are really condemning the very thing which they are ostensibly advocating!

The Hydro-Electric interests, too, have been active in putting before the municipalities of the province, and even before the Dominion government, the necessity of having railway nationalization, although Sir Adam Beck, chairman of the Hydro-Electric Commission of Ontario, is opposed to having the Canadian Pacific included in the nationalization policy. With such a wide range of supporters, including some which we have not mentioned, government ownership has been heralded widely as the panacea for our ills.

The Attitude of Employees and of Shippers.

Two other classes, which lack the clamorous propensity of those above mentioned, ought to be consulted before forming any conclusion regarding the issue at stake, namely, the laboring classes and the shippers. The writer has taken the opportunity to speak with members of these two groups, and the laboring class he finds about evenly divided; those in the lower positions of the railway service usually favor government ownership, because they think that under that system wages would be increased; but those in the higher ranks fear that if all the railways were put under government ownership we should simply have the perpetual repetition of the Intercolonial Railway management, only upon a greatly enlarged scale. The low wages and the system of promotion of those engaged in the postal service would seem to be a sufficient answer to the former, especially when we join with that the fact that the wages on the Intercolonial are no higher than on the private lines; and the apprehension of the latter group is but too well founded. The shippers, in general, would expect lower rates under government ownership, but they are convinced that the facilities for transportation would lack the tone and the stimulus which now exist, and the settlement of claims would be indefinitely more prolonged. Here it may be pertinent to say that if the laborers were constantly pressing for higher wages and the shippers were urging the necessity of lower rates, the government would not be so capable of resisting this pressure from both sides as would a private company; and if the expenditures for labor were increased—as they would be by the influx of men into the government service—while the revenues from lower rates were reduced, a larger amount would have to be made up by general taxation.

(*To be Continued.*)

MOBILIZING CANADA'S LABOR FORCES

The government has done the right thing in taking action to mobilize the nation's full labor power. The times demand deeds, not words. The fate of liberty-loving nations trembles in the balance. Recalling with just pride what her sons have accomplished, fully assured that their courage will meet every test, that their will for victory is inflexible, Canada with quiet confidence will do her duty in this hour of crisis and of peril.

We are convinced that every man, woman and boy has a present supreme duty to the State—the duty of performing useful, productive work. Distinctly war work must come first in the country's economic programme; the production of munitions, clothing, ships, and food and the scores of accessories required for efficiently carrying on the war. Thereafter, and after all primary demands have been met, the machinery of production must be kept in full operation to the end that the wealth essential for financing national requirements, on war account, will be forthcoming.

The mere possession of property, or income from investments, gives no one the right during these hard days to live a life of leisure. Not for an instant can the people of this country forget or neglect the men who are giving their all that liberty and justice may not perish from the earth. The vast majority of men of means have done their part. The others must.

Methods have been devised under a recent order-in-council to eliminate the shirker and all others who are voluntarily idle. Magistrates everywhere should relentlessly enforce the provisions of the law.

Senator McCumber recently introduced a bill in o the United States Senate providing for the registering of all male citizens between the ages of 16 and 62, and for subjecting them to "the call of the government to perform such service in transportation, ship-construction and war-supplies as the government might require." This bill, in all probability, will not at present be made the law of the land, as it embodies the principle of industrial conscription. Nevertheless, the American nation will not permit the word "conscription" to terrify it, if circumstances demand drastic action. Their military record proves that beyond any possibility of doubt. Within six weeks of the declaration of war the draft measure was on the statute books.

The Canadian administration likewise does not propose the conscription of labor at this juncture. Nevertheless, conscription will come if it be found essential for the winning of the war. France and the United Kingdom have had virtual conscription from the outbreak of hostilities. Workmen were not free to move from place to place, and from trade to trade, as in peace times. In the United Kingdom, as is well known, a workman could not hope to leave his job and get employment elsewhere unless he had secured a certificate showing that he had been honorably discharged. And that was, virtually, conscription.

And why not? The State had the power to draft men into the army and navy, and compel them to face all the risks and rigors of war. The pay the British Tommy received was small. It was no hardship to force a man to work at home in safety, at standard rates of pay.

It is objected in the radical press that the army pays no interest and dividends; that it has no stockholders or bondholders; that, aside from generals, the rate of remuneration is small, even insignificant. And thereupon a smashing indictment is drawn up against the Rockefellers, the Schwabs, the Astors, the Shaughnessys, the Flavelles and the other industrial leaders who draw interest, dividends and large salaries—who "reap where they have not sown, and gather where they have not strawed."

No more specious argument has ever been presented. In the United Kingdom, the United States and Canada, wealth, in the form of excess profits taxes, corporation and income taxes, is being made to bear the burden of war. Innumerable examples might be given of the patriotic and unselfish rôle played by men of wealth during the course of the war. It is high time that the *coup de grace* were given to the contention that the "capitalists made the war."

The conclusion of the whole matter is, that as long as labor is protected by standard rates of wages it has no cause for complaint—even if conscripted. In the United Kingdom the workmen, through their associations, entered into an agreement to suspend trade rules and all special privileges during the war. In Great Britain and France, men and women are bending their every effort to achieve victory. Canada can do no less. It is not merely a question of holding the Hun, of effecting a stalemate. The will of democracy must prevail. And it cannot prevail unless every sacrifice, with implacable resolution, is made for the common cause.

OUR POST-BELLUM REVENUE

In their consideration of the burdens that will be left by the war, conservative observers in all belligerent countries are obliged to take into account the contingency that the national revenues may shrink rapidly with the cessation of the special activities incidental to the war. Hon. A. K. Maclean, the acting minister of finance, estimated a revenue of $270,000,000 for the fiscal year ending March, 1919. That represents an increase of $100,000,000 over the revenue of the greatest of our pre-war years; and if the gains can be held, the revenue should satisfactorily support the load of new government debt created by the war. In Canada's case it is difficult to estimate the changes that will take place in the post-bellum revenue. It seems to be generally agreed that the excess profits tax will be abolished. That tax is designedly an attempt to turn into the national exchequer a part of the extra profits made by companies actively engaged in war work. After the war the excess profits will presumably vanish, so the productivity of the tax would diminish. This item accounted for $21,000,000 in the fiscal year just ended, and probably it figured for a like amount in the estimates for 1918-19.

The income tax, on the other hand, bears all the signs of being a permanent institution. The taxes collected this year will presumably be based on the tax schedules passed last summer; but next year, when the new rates as applied to 1918 incomes are collected, there is certain to be a substantial increase in the revenue derived from this source. We have to remember, however, that while the income tax may be a permanent feature of our national financing, it may yield less revenue for a couple of years or so after peace returns. Many of the large incomes derived from special war work will perhaps be cut down, and it may take a little while for the general income of the country to recover to the level reached in the war. On the other hand, it is the case that the war cut off and reduced many of the incomes derived from the purely peace activities. One meets everywhere people whose incomes have been greatly reduced as a result of the war. Many of these will gradually work up the incomes to the old level, and above it, once the war is ended. So, on the whole, it is reasonably safe to regard the income tax revenue as something that will be fairly well maintained.

The post-bellum course of the customs revenue, it is not possible now to predict. That will depend on tariff policies and on the circumstances of other countries. It seems certain though that European countries, particularly the Mother Country and our devoted allies in Western Europe, will need our foodstuffs to as great an extent as we can produce. Apparently, too, the prices realized on these shipments will be such as to give us fair profits. Thus, if our exports are very large, the chances are that the import trade, too, will be well maintained; and if the tariff rates are in the neighborhood of the present level, the customs revenue should not be unsatisfactory. The outlook is for expansion of our agricultural production, and some at least of the new industries created during the war will be busily engaged for years to come. So there does not appear to be any reason why we should be discouraged or depressed as regards the ability of the country to carry the war burdens.

NEW TAXATION PROPOSALS

The revised system of taxation as outlined by the acting minister of finance appears to have successfully withstood over a week's discussion and criticism. In fact almost the only criticism regarding the new income tax is that it is still too low. It is thought by many that the burden should be thrown still more upon the shoulders of those enjoying a large income. On the other hand, the lowering of the minimums to $1,000 for single persons and 2,000 for married persons does not seem to have met with any objection, as these are the minimums allowed in the United States. The taxes which have occasioned most criticism are the taxes on tea, on matches, on jewelry, and on motion picture films. The former two, at least, will fall upon the shoulders of the poor almost as much as they will on the rich. The tax on tea is ten cents per pound, whether the tea be of poor or of good quality. The effect of the tax on matches when its effects are fully felt will probably be to almost double the price. These two items will emphasize the cost of the war to the humblest inhabitant.

The tax on tea is to be collected not only on future imports, but also on tea now held in storage in Canada. In Port Arthur and Fort William alone there are close to 5,000,000 pounds, the yield on which will be over $400,000. A large lump sum will therefore be realized from the whole country. It is expected that the tax on matches will be very fruitful and that it should bring in nearly $3,000,000 per annum. The E. B. Eddy Company, of Ottawa, who are the largest manufacturers of matches in Canada, will, if their present output be maintained, pay into the treasury seven to eight thousand dollars per day. This tax is to be collected directly from the manufacturers which is no doubt the most convenient and cheapest way of obtaining it. There has been some complaint that the tax on matches is too heavy and it is quite probable that the consumption of matches will be at least fractionally reduced. Regarding the tax of five cents per foot on motion picture films, firms using these maintain that it is much too heavy and will seriously curtail imports; on the other hand, they point out that no revenue will be obtained in this way from films which are merely sent into Canada by exchanges, to be returned shortly to the United States.

On Friday, May 3rd, a deputation of jewelers went to Ottawa to lay their grievances before the government. The jewelers did not complain against bearing their share of taxation, but pointed out that much of their stock in trade was out of date, and unmarketable, and that the 10 per cent. tax should not be imposed on such goods as were no longer saleable. Various alternative ways of collecting the tax were discussed, and the jewelers are hopeful that some alteration will be made.

The collection of the internal taxes will, of course, involve a certain amount of labor, but as many excise officers have been released by prohibition, these can be utilized for the purpose. Insofar as customs duties are merely increased, there should be no advance in the cost of collection.

IS COLD STORAGE INIQUITOUS?

Acts as an Equalizer of Prices—Profits in United States Very Low—Hostile Attitude Towards Industry

BY G. R. MARNOCH

President, Lethbridge Board of Trade.

"All cold storage business is vicious and iniquitous." If public opinion generally is to be judged by what we read in the press and by what the man in the street says, that is the conclusion that the Canadian public has reached.

Storage Plant Wanted in Lethbridge.

All the same the people in Lethbridge and the surrounding districts would be very glad to see one of these halls of iniquity set up here. Quite a serious effort in the direction of starting a company to build and equip a cold storage house was made here a year or two ago; but after some deliberation the project was dropped. The idea was to take advantage of the Dominion government subsidy of one-third of the cost of the building and equipment; but as the conditions attached to the subsidy are that a considerable amount of the space must always be held at the disposal of the public, it was felt that the keeping of that amount of space perhaps out of use altogether for long periods of time would make the project quite hopeless. From enquiry made then it appeared that such concerns as had established themselves on the basis of the subsidy managed to remain in existence by the additional capital that they could provide for actually buying produce outright in times of plenty, and selling it in times of scarcity, and applying the margin of profit to the cost of running the establishment; and that even so the risk had to be taken in spite of the agreement with the government, of filling up, on the company's account, of practically all the available space, and of providing space for the public for storage, somehow, if the demand arose.

The Case for the Cold Storage Business.

The fact is, that when a producer has anything to sell, he wants to sell at once and put his money into further production. He wants to leave the holding and handling to somebody else who is in constant touch with all the likely markets. The consumer's quite natural desire is to buy always at the lowest price; but the consumer's need arises at a particular moment, and, as the modern world has arranged itself, that need has to be met. A great many of us live in apartment houses, but even of those of us who live in our own homes there are very few indeed who have anything like the facilities that our grandmothers had for preserving and storing our food supplies; and, when we come to think of it, we begin to see that the cold storage houses have better means for storing our food than our grandmothers ever had; and better means than we could provide in even the best laid-out private home.

The consumer grumbles when the cold storage house starts to buy eggs in April, because, as she says, that raises the price she has to pay. Well, what would she have? That the cold-storage house should keep off the market then? All right. Then December and January come along; no eggs in cold storage; what an iniquity—why didn't the cold storage houses provide for this? Why, because you wouldn't let them do so in April.

And what does the farmer's wife and the poultry plant say? They say, what's the use of all our trouble and expense keeping hens all through the winter, when we have to sell our eggs at any old price in April and May? And so they go out of business, and we get no eggs at all. Then the consumer begins to come to his senses a little. His wife thought eggs came out of the telephone; and when the telephone declines to lay eggs, she begins to think.

A Useful Middleman.

The gist of the matter is that cold storage is an efficient, up-to-date method of carrying over food from seasons of plenty to seasons of scarcity. The producer wants to market his stuff, he doesn't want to keep it; the consumer wants food when he wants it; he doesn't want to keep it. The cold storage man comes in between, he buys from the one, takes care of the food for a while, and sells when it is needed as is indicated by the market price.

Of course the kindly critic says the cold storage man does not sell when it is needed. The ordinary commonsense answer to that is that if he does not sell when the market is good, he is a poor business man. Nobody except the miser tries to keep merchandise for ever, and the miser is a fool. No merchant buys goods for the pleasure of keeping them and looking at them. We need hardly try to persuade ourselves that the cold storage man is both a knave and a fool.

Packing Plants in the United States.

Prof. Richard Graham, of the Ontario Agricultural College, said recently: "I have travelled over a large part of the United States, inquiring into packing plants, examining the cold storage facilities, and testing their goods. I have learned that there is never any very big money made out of these concerns, and I have occasion to know of some very serious losses that have been sustained from time to time." And his words are more than verified by the official statement of the Bureau of Markets of the United States. Charles J. Brand, chief of the Bureau, says in his report of March 11th in regard to cold storage of eggs:—

"If we lump the results of the three years for which the Bureau of Markets has accumulated data and issued reports, we find a net profit of approximately two and a half million dollars on an investment of one hundred and forty-eight millions, or approximately one and two-thirds per cent., making no allowance for interest on investment."

The Function of the Packer.

Let us see now what we arrive at as a result of this little discussion. The producer wants an even and steady market for his produce; if he can't get it, he curtails his efforts—that can hardly be said to increase the foodstuffs that are available. The consumer wants food cheap all the time, but mainly he wants food; and if he would think a little, he would discover that even and steady prices would suit him better, too. The cold storage man provides the means for arriving at these steady and even prices. Therefore, what we want is *more* cold storage houses, and not to put those that are now providing the service out of business.

The Industry Is Valuable to Canada.

As Professor Graham says: "There is no reason why every person should not have a poached egg for breakfast the year round. Perfect storage conditions would render this possible. In fact, I will defy anyone not a first-class expert to tell the difference between a fresh egg and a stored egg even for six months under these ideal conditions. The packing house is the proper place for this business. It would be better if private packing of eggs beyond one's home supply were discountenanced. In Denmark their great advantage lies in the farmers being in easy distance of packing houses, so that the egg goes into storage within a few hours of production.

"It is the same in the case of meats. The packing houses in Canada have certainly contributed much to our agricultural prosperity and we are decidedly out of sympathy with any campaign to drive them out of their present business. It would be poor business for Canadians."

But who will be valiant enough to put his money into cold storage business in face of the facts that have been quoted as to earnings, and in the present state of public opinion as to the iniquity of the business? And in the meantime we have to wait for the conveniences and thrift of cold storage; for, as Poor Richard says: "Industry need not wish, and he that lives upon hopes will die fasting."

TILLSONBURG GUARANTEES BONDS

A by-law to cancel a $9,000 mortgage and to guarantee $25,000 of bonds of the Huntley Manufacturing Company, Limited, was carried in Tillsonburg on the 7th inst. The company's plant was recently destroyed by fire, and a new factory building will be erected.

According to reports received by Hon. Duncan Marshall, minister of agriculture, Alberta's last year's acreage of 6,250,000 will probably be raised to 9,000,000 acres, the increases being fairly distributed from north to south. The land is reported all over the province to be in the best of condition, and early seeding has been general. Mr. Marshall said that there had never been a better spring season, and the outlook was certainly promising.

ALBERTA LEGISLATION

Important Acts During Recent Session—Provincial Finances—New Taxation

A synopsis of the acts of the Alberta legislature, during the session from February 7th, to April 13th, 1918, has been prepared by Mr. John D. Hunt, B.A., clerk of the executive council. Among the notable features of this session, he refers to the first appearance of the Hon. Charles Stewart as premier in the house, and of the Hon. George P. Smith as provincial secretary; the presence of two women members; and the absence of four members on duty overseas.

The speech from the throne dealt with the questions of production and conservation, public administration during the war, and the problem of the returned soldier. During the session 64 bills were considered, of which 54 were introduced as government bills, and 10 as private bills. The number of acts passed was 46.

Some of the acts, as summarized by Mr. Hunt, are as follows:—

Succession Duties.

No. 14.—An act to amend the Succession Duties Act.

"The amount of property exempt on passing to a near relative resident in the province has been reduced from $25,000 to $10,000, except that the property of a deceased soldier so passing is exempt up to $25,000.

"Property devised and bequeathed for religious, charitable or educational purposes to be carried out in the province is exempt up to $2,000.

"A new table of percentages, with a graduated increase of taxation for increased amounts and for more distantly related beneficiaries, is adopted in the act.

"A notice of sales by auction of the property of deceased persons, such notice to show the name of the deceased person, the date of his death and a detailed inventory of the property to be sold, shall be sent to the provincial treasurer by the executor or administrator by registered mail at least seven days prior to the date of the sale, and when any property of a deceased person has been sold by private sale the executor or administrator shall, within thirty days after the sale, send a report to the provincial treasurer showing the name of the deceased person, the date of his death and a detailed statement of the property offered for sale and the amount realized for each item sold. Any executor or administrator failing to give notice as aforesaid shall be liable upon summary conviction to a penalty not exceeding $500."

Sale of Shares.

No. 25.—An act to amend the Sale of Shares Act.

"The amendment sets out certain stocks, bonds and securities the sale of which shall not come under the provisions of the act.

"Where the board refuses to grant a certificate for sale of stock, such refusal shall not debar the applicant from renewing the application within twelve months of such refusal.

"Every certificate for the sale of stock shall be granted for the period of one year from its issue, and may be renewed for any further period not exceeding one year.

"The section requiring all agents selling stock to have licenses from the board has been amended to give the Lieutenant-Governor-in-Council power to exempt from the provisions of the section co-operative associations allowing no commission on the sale, of their shares, stock or other securities."

Provincial Revenue.

No. 26.—An act to supplement the revenue of the province.

"This act provides for an annual tax in every city, town and village of one mill on the dollar, and in rural areas of a tax of four cents per acre, or such lesser amount, down to two cents per acre, in any municipality or other unit, as may be fixed by a commissioner appointed by the government, who shall give consideration to the general circumstances of the unit affected; provided that all taxable persons shall pay at least 25 cents, and that lands held under grazing lease or permit from the Dominion government shall be taxed at one cent per acre.

"The tax shall be levied and collected in a manner similar to municipal taxes, and shall be sent to the minister of municipal affairs, who shall pay the same to the provincial treasurer to form part of the general revenue fund of the province.

"Where tax notices have already been sent out, the assessor shall send out special notice of this tax. No discount shall be allowed, and land used for industrial purposes and otherwise exempted shall not be exempt from this tax.

"A commission of two and one-half per cent. shall be paid to any municipality upon the amount collected by it.

Provision is made for statements of assessment and acreage to be sent to the minister of municipal affairs by municipalities, for penalties for default, and for inspection and audit of the records and accounts of all municipalities.

"The minister of municipal affairs may make regulations and provide forms for the carrying out of the provisions of the act."

Treasury Department.

No. 30.—An act to amend the Treasury Department Act, being chapter five of the statutes of Alberta, 1916.

"Notwithstanding any other provisions of this act, the provincial treasurer, with the approval of the provincial auditor, may apply any or all refunds received with respect to expenditure of the previous fiscal year against the expenditure of such year at any time prior to the submission of the public accounts for that year to the legislature, this section to apply to refunds in the year 1918 and subsequent years.

"The salary of the provincial auditor is fixed at $4,000 per annum."

Trust Companies.

No. 34.—An act to amend the Trust Companies Ordinance.

"The expression 'trust company' is extended to any company constituted or operated within the province for the purpose of acting as executor, administrator, trustee, receiver, assignee, agent, liquidator, guardian of a minor's estate or committee of a lunatic's estate.

"Provision is made for the inspection of the affairs of a trust company by an inspector appointed by the Lieutenant-Governor-in-Council, and for every company to file with the minister on or before the first of March in each year a complete statement of the company's affairs in the form given in the schedule.

"A penalty is provided for default in transmitting such statement."

Insurance.

No. 35.—An act to amend the Alberta Insurance Act.

"Outside companies are required to appoint a resident in the province upon whom any process against the corporation may be served. The superintendent of insurance formerly acted for all companies.

"The liability of a company on contracts of hail insurance is set out in detail and hail insurance conditions enacted similar to those adopted in Manitoba and Saskatchewan, to be deemed part of each contract of hail insurance in force in Alberta.

"Provisions applicable to companies hereafter incorporated by the legislature are set out in full, and a short form of model bill for the incorporation of an insurance company is adopted."

Provincial Companies.

No. 37.—An act to amend the Companies' Act, 1913.

"Where it is proved to the satisfaction of the minister of railways and telephones that an association desires to be formed as a limited company and is to be formed for the purpose of carrying on the business of a telephone company and that such association intends to apply its profits, if any, in promoting its objects, the minister may by license direct that the association be registered for a limited term as a company with limited liability, without the word 'limited' to its name, and the association may be registered accordingly upon the payment of such fee as the minister may direct.

"No such registration shall empower the company to carry on a commercial business, nor shall it confer any exclusive right to the operation of a telephone system within the area served by the company. The license may be granted under such conditions and regulations as the minister thinks fit, and shall, if the minister so direct, be inserted in the memorandum of articles, and the registrar shall not register

any such memorandum until he is satisfied that no such direction is required."

Amusement Tax.

No. 39.—An act to provide for the collection of a tax on persons attending places of amusement.

"This act provides that every person attending an exhibition, performance or entertainment at a place of amusement to which an entrance or admission fee is charged shall, on each admission thereto, pay an amusement tax as follows:—

"(1) When the price of admission is from 10 cents to 20 cents, inclusive, a tax of one cent;

"(2) When the price of admission is more than 20 cents, but not more than 75 cents, a tax of 2½ cents;

"(3) When the price of admission is more than 75 cents, but not more than $1.00, a tax of 5 cents;

"(4) When the price of admission is more than $1.00 and not more than $2.00, a tax of 10 cents;

"(5) When the price of admission is more than $2.00, a tax of 25 cents;

"(6) A tax of 25 cents shall be paid by every person attending any boxing bout or contest;

"(7) Where admission is given by pass or complimentary ticket, a tax shall be payable at the highest rate charged for the performance to which admission is granted.

"The provincial secretary is given power to exempt from taxation all persons attending an exhibition, performance or entertainment where the proceeds are to be devoted to religious, charitable or patriotic objects."

Taxation of Corporations.

No. 43.—An act to amend the Corporations Taxation Act.

"The tax on the head office of a bank is raised from $1,000 to $1,200, and a branch bank from $125 to $200.

"The tax on every company or corporation other than a municipal corporation in any city supplying gas for gain shall be a tax of $500.

"Every company or corporation other than a municipal corporation supplying or dealing in natural gas shall be subject to a tax of one-quarter of a cent for every 1,000 cubic feet of gas flowing, drawn or pumped from or produced by a well owned, leased, occupied or operated by such company. Where oil in paying quantities and natural gas are found in the same well and the well is worked mainly for the production of oil, such gas shall not be subject to the tax.

"Provision is made for the correct measurement of the amount of gas produced by any well.

"Every company or corporation which carries on business either partly or wholly in a city or town of a population exceeding 1,500, other than a municipal corporation, the main object of which is the generation, distribution or supply of motive power or energy of any description shall pay a tax of $1,000.

NEW MANAGER FOR OCEAN ACCIDENT

The directors of the Ocean Accident and Guarantee Corporation, Limited, of London, England, desire to announce the appointment of Mr. William Thomas Perry as manager of the corporation for Canada and Newfoundland, to succeed Mr. Charles H. Neely, who has been appointed manager and attorney of the United States branch.

Mr. Perry has been in the service of the corporation for many years in London, and recently in New York, and it is, therefore, confidently expected that the high standard of efficiency maintained for Ocean service to its policyholders and agents will be continued.

PERSONAL NOTES

MR. HUGH MACKAY, of Montreal, has been elected to the directorate of the Toronto Railway Company.

MR. H. H. PITTS, of Ottawa, has been elected to the directorate of the Toronto Railway Company.

MR. MARK WORKMAN, president of the Dominion Steel Corporation, Limited, has joined the board of the Eastern Trust Company of Montreal.

MR. JAMES CARRUTHERS, president of the Canada Steamship Lines, Limited, has joined the board of the Eastern Trust Company of Montreal.

MR. H. J. SUTHERLAND, manager of the Queen and Church Street branch of the Bank of Nova Scotia, has gone away on a two months' holiday.

MR. RANDALL DAVIDSON, manager for Canada of the North British and Mercantile Insurance Company, is making a business trip through the west.

MR. W. H. KNOWLES, who was previously with the Crown Trust Company, will manage the new real estate department of the Eastern Trust Company of Montreal.

MR. E. F. MCNEILL, formerly manager of the King and George Street branch of the Bank of Nova Scotia, Toronto, has gone to Regina to manage the bank's branch there.

MAJOR THOS. GIBSON, a well-known Toronto lawyer and financier, has been appointed acting deputy minister of militia overseas while Colonel Walter Gow is in Canada.

MR. W. G. WATSON, assistant general manager of the Toronto General Trusts Corporation, has been appointed honorary treasurer of the Missionary Society of the Methodist Church in Canada, in succession to Mr. H. H. Fudger, who has resigned.

MR. E. S. CRAWFORD, manager of the Queen and McCaul Street branch of the bank of Nova Scotia, Toronto, will also look after the bank's business at the Queen and Church Street branch, in the absence of Mr. H. J. Sutherland, who is away on a two months' holiday.

MR. WILLIAM S. GRAY, formerly Dominion Bank Manager at Regina, has returned to Toronto to manage the market branch of the bank in his native city. Mr. Gray has had an extensive experience in banking in the west, having managed branches at Boissevain, Grenfell in Saskatchewan, and Edmonton, Alberta, before going to Regina.

MR. H. C. FLOOD has succeeded Major H. B. Stairs as manager of the Eastern Trust Company in Montreal. He is a St. John, N.B., man, who has been associated with the company for the past four years. Previous to that he was connected with the Royal Securities Corporation, representing it principally in the maritime provinces.

Municipal Accountant Wanted

Wanted—for an important Ontario Municipality an experienced and efficient accountant—preferably a chartered accountant. State age, qualifications and salary expected. Position permanent. Apply, Box 179,

Monetary Times, 62 Church St., Toronto,
or Monetary Times,
1208 McArthur Building, Winnipeg.

Dividend Notice

NOTICE is hereby given that a Dividend of Three Per Cent. (Twelve per cent. per annum) on the paid up capital of the Bank, for the quarter ending 31st May, has this day been declared, and that the same will be payable at the Bank and its Branches on 1st of June next.

The Transfer Books will be closed from the 24th to 31st, both days inclusive.

By order of the Board.

J. P. BELL,
General Manager.

Hamilton, April 22nd, 1918.

GERMAN IRON AND STEEL INDUSTRY

Foundations Laid for Extensive Research—Supported by Government—Kaiser Wilhelm Institute for Science

In last week's issue of *The Monetary Times* Germany's methods of encouraging war industry and after the war industry were described. A special account referring to the iron and steel industry has also been prepared by Sir Robert Hadfield, based on translations from German sources. About a year ago a special institution and research laboratory was planned, to be devoted entirely to researches on iron and steel. Sir Robert asks if this activity on the part of Germany is to go unchallenged by England. Whilst Great Britain has several important laboratories devoted to research on iron and steel, there is, he states, required a general building and common meeting place for such important institutions as the Iron and Steel Institute, the Institute of Metals, the Institution of Mining and Metallurgy, the Institution of Mining Engineers, the Faraday Society, the Society of Chemical Industry and others. Progress in Germany is related as follows:—

Origin of the Institute.

On March 4th, 1917, at a general meeting of the Verein Deutscher Eisenhuttenleute (German Iron and Steel Institute) held at Dusseldorf, Dr. Fr. Springorum, during the course of his address, said the committee appointed by the board of that institute had recently discussed the subject and recognized the necessity of promoting progress in metallurgy by the establishment of a special Research Institute, probably to be attached to the Kaiser Wilhelm Society.

This was followed on June 19th, 1917, by a further meeting of the same institution at which a resolution was unanimously passed with regard to the establishment of such an institution and research laboratory to be devoted to research on iron and to be attached or affiliated to the Kaiser Wilhelm Society, an important new German association.

On July 6th, 1917, at a meeting of the senate of the Kaiser Wilhelm Society, held under the presidency of Professor Von Harnack, the senate declared itself in agreement with the proposal of the Verein Deutscher Eisenhuttenleute to establish this institute and laboratory for research on iron and steel.

On July 28th, 1917, reference was made to the meeting of the Verein Deutscher Eisenhuttenleute held on June 19th, and after discussing the foundation and site of the building, the writer stated that, "the means for building and maintaining the institute, except a small contribution from the Kaiser Wilhelm Society, will be raised by the iron and steel industry of Germany."

Finally, from the latest information in the possession of the compiler of this present statement, there was held on November 13th, 1917, the first meeting of the "Curatorium" (Trustee Committee) of the Kaiser Wilhelm Institute with regard to the establishment of the Research Institute and Laboratory for Research on Iron and Steel in the "Stahl und Eisen" Building in Dusseldorf, when Dr. Springorum was elected chairman.

Importance of Iron and Steel.

Dr. Fr. Springorum, during the course of his address at the meeting on March 4th, 1917, stated:—

"The titanic struggle of nations has confronted our iron industry in every direction with particularly great difficulties, and I hope that some day, when the war-time records of our works and our associations may be more freely disclosed, not only the full tribute of recognition will be paid for the great things which have been achieved, but that it will also be possible, immediately, to find ways and means of further pursuing in the interest of the Fatherland, the thousandfold problems which, arising from the emergencies of war, could perhaps be solved only in part during the war. We shall, after the war, far more than hitherto, have to depend on ourselves and to rely on our own strength. Accordingly, the demands on us will be enormous. Industry will only be able to meet them by strenuous work, and will, above all, have to study better utilization of fuels and the further perfecting of metallurgical processes. Co-ordination between metallurgical practice and metallurgical research, which has always been insisted on and promoted by us, will in future be imperatively needed.

"The weightiness of these facts has revived among our board an old idea which, to our gratification, has once more been brought forward, of late, by Prof. Oscar Simmersbach—viz., to prepare the soil in order to call into life as quickly as possible, and to promote by financial assistance, an increased activity of research in the domain of the metallurgy of iron and its alloys. For the study of this question the board has appointed a committee which has recently held an exhaustive discussion on this subject. They were unanimous in recognizing the necessity of promoting with all energy, by scientific research, the progress of metallurgy, with an eye to the exceedingly keen competition in the world's markets to be anticipated after the war. The only divergency of opinions still existing is as to how such promotion can be effected in the best and most effectual manner, whether by the establishment of a special Research Institute, possibly attached to the Kaiser Wilhelm Society, or by the expansion of an already existing similar institution, or by studying the problems of research, as they arise, in one or the other scientific laboratory, but always while maintaining the requisite relations with the practical working establishment.

Its Aims and Financial Support.

"We may leave the decision as to the course to be adopted to be quietly matured, but the board recognized that it seemed appropriate just now, in view of the present general meeting, to acquaint the members with this far-reaching and weighty project, and to gain for its adherents in the widest circles of our works and members. No doubt, funds to a considerable amount will be required for carrying it through; the board has therefore approved the proposal of its committee that steps should be taken for collecting a nucleus of funds, which should for the present remain at the disposal of the board of the German Iron and Steel Institute. This fund is to serve in the first place to assist towards turning to account, in practical working, the results of the hitherto purely theoretical labors of the special branch committees of the institute in the manner appearing most suitable in each case, if a research committee, to be specially appointed for this purpose, endorses the proposal of the respective special branch committee, and if the board, on its part, considers the granting of funds for the respective purpose appropriate. In this way it would be possible, by enlisting suitable experts or institutions, to take in hand, with the least possible delay, the study of scientific questions important to the iron industry, and at the same time we should in this way, collect reliable data to serve as a basis for the establishment of a special institution.

"In thus submitting, for the first time in public, the idea of the creation of a fund for an 'Institution for Metallurgical Research,' I feel convinced that, when hereafter, the works are called upon to contribute towards the creation of the fund, we may also rely on general and liberal support in the shape of contributions. The German iron industry would thereby erect to itself a worthy war memorial—a cradle for the solution of the manifold probems, still confronting us, and which are of great importance, not only as regards the iron industry, but also as regards the common weal of our Fatherland."

Rounding Out Research Plans.

In the midst of war, the German iron and steel industry has laid the foundation stone of an important work of peace. At the meeting of leading men of the German iron and steel industry from all parts of the empire, which was held on June 19th, 1917, at Dusseldorf, the establishment of an institution for research on iron and steel was discussed. The invitations to the meeting were issued by the Verein Deutscher Eisenhuttenleute (German Iron and Steel Institute), whose president, A. Vogler, general manager of Dortmund, took the chair at the meeting.

Dr. O. Petersen, Dr. Eng., secretary of the association, gave an exhaustive exposition of what had hitherto been done in the department of scientific advancement of the metallurgy of iron in the various countries. He pointed out the necessity of rendering foundry-technical research more and more profound in order that we may be well-armed in every respect in the inevitable economical struggle of the after-war period. He could only refer briefly to the great and important tasks devolving on a research institution, especially as they are shortly to be dealt with more explicitly in an exhaustive commemorative publication. The speaker pointed out, however, that only a research institution free from any one-sided direction or delimitation of its purposes would be capable of taking these in hand with any prospect of success. The speaker further explained how such an institution should be arranged, developed and maintained, in detail, thus sketching to the meeting the main outlines of the new Research Institution itself as well as of the prerequisites of its fruitful working.

"The subsequent expression of opinions on the part of those present led, we are glad to say, to the momentous resolution, passed unanimously, that the German iron and steel

industry was willing to establish a special scientific institution for iron and steel research, to be attached (or affiliated) to the Kaiser Wilhelm Society. The preparatory work will be set on foot at once by the Verein Deutscher Eisenhuttenleute, and the association will also be subsequently afforded the opportunity of ensuring, in conjunction with the administrative committee of the insituton and a scientific advisory council, the indispensable cohesion between the iron industry and the new research institute.

"The locality of the new foundation has not yet been definitely decided upon, the decision hereon has been left to the Verein Deutscher Eisenhuttenleute. But according to the views expressed in this respect at the meeting, the Research Institution will be located in the Rhenish-Westphalian industrial region. The south-western and Silesian iron industries have unselfishly renounced from the outset, in the interest of the great cause, all claims in this direction.

"The considerable funds required for the construction and maintenance of its Research Institution will be provided by the iron and steel industry alone, apart from a small contribution from the Kaiser Wilhelm Society, while the town in which the institution will be established will have to undertake to provide, in addition to a subsidy towards the building expenses, the requisite ground for its site, and its connection with the railway by a siding, etc. The possibility is not precluded that, later on, other industries engaged in the further elaboration of iron and steel may themselves take a share in the new Research Institution.

"Thus it seems that all prerequisites are provided for to enable this new creation to exercise a highly momentous and beneficent influence on the further technical development of German metallurgy of iron. It must be considered a high merit of the German iron and steel industry that the project submitted by Dr. F. Springorum, Doc. Eng., councillor of commerce, of Dortmund, at the last general meeting of the Verein Deutscher Eisenhuttenleute, has so speedily been realized."

Constitution of the Institute.

"On the 6th July, 1917, a meeting of the senate of the Kaiser Wilhelm Society (founded 1911) was held under the presidency of Professor von Harnack. Dr Schmidt, ministerial director, and Richter, privy councillor, had appeared on behalf of the ministry of public worship and education. There were present the senators Dr. Fischer, von Gwinner, Koppel, Dr. Krupp von Bohlen und Halbach, Franz von Mendelssohn, von Moller, von Passavant-Gontard, Dr. Planck von Rath, Dr. von Schjerning, Dr. von Schnitzler, Dr. von Siemens, Count Tiele-Winckler, von Waldthausen, and Dr. Trendelenburg, District Judge, General Secretary.

"The Senate declared itself in agreement with the proposal of the Verein Deutscher Eisenhuttenleute to establish the 'Research Institute for Steel and Iron,' projected by them in the form of a 'Kaiser Wilhelm Institute.'

"It is intended to establish, jointly with the 'Leopold Koppel Foundation,' an 'Institute for Physical Research.' The institute is to promote the investigation of promising problems of theoretical and experimental physics by monetary grants to individual investigators. Professor Einstein, member of the Academy of Sciences, has been proposed for appointment as director of the institute. The scientific management is to be entrusted to a directorate of eminent physicists, and the administration of the institute to a body of curators."

Kaiser Wilhelm Institute for Research on Iron.

"Since the German iron and steel industry, on June 19th last, adopted the momentous resolution to found an institution for free scientific research in the domain of iron, the preparatory work intended to afford to this new centre of research an assured organistory and financial basis has been advanced by the Verein Deutscher Eisenhuttenleute sufficiently far to admit of the first meeting of the 'Curatorium' (Trustee Committee) being held on the 13th inst. in the "Stahl und Eisen" Building in Dusseldorf. The 'Curatorium' of the research institution, which will carry on its activity under the style and title of 'Kaiser Wilhelm Institute for Research on Iron,' consists of his excellency Dr. Schmidt, minister of education and public worship (substitute, Prof. Krüss) as representative of the ministry of education and public worship; his excellency Prof. D. A. v. Harnack, royal privy councillor, president of the Kaiser Wilhelm Society (substitute, Dr. Trendelenburg, secretary general); his excellency Prof. Emil Fischer, royal privy councillor, and Dr. Gustav Krupp von Bohlen und Halbach, as representatives of the Kaiser Wilhelm Society,—and Dr. F. Springorum, Dr. Eng., general manager, councillor of commerce, member of the Prussian Upper Chamber (Dortmund), Dr. O. Niedt, Dr. Eng., general manager, councillor of commerce (Gleiwitz) and A. Vögler, general manager (Dortmund), as representatives of the Verein Deutscher Eisenhuttenleute. The meeting, at which all the above-mentioned gentlemen, except his excellency Prof. Fischer, were present, was also attended by the secretary of the Verein Deutscher Eisenhuttenleute, Dr. O. Petersen, Dr. Eng. Dr. Springorum, councillor of commerce, was elected chairman of the Curatorium. The subject to be dealt with at the meeting was the rules and regulations of the new Research Institution.

PROGRESS OF SOLDIERS' SETTLEMENT

Good Use Being Made of the Opportunity—Veterans are Assisted in Every Possible Way

The Soldier Settlement Act opened up a wide field of opportunity for the returned soldier, and the encouragement given to farm production is particularly desirable at the present time. The act is administered by the soldier settlement board, under the supervision of the minister of the interior, Hon. Arthur Meighen. According to Mr. Meighen, the work is developing satisfactorily, and his personal attention is given to the details. As the whole future of the veteran is involved, and the initial assistance is of so much importance, careful consideration is given to each case before action is taken.

Regulations Issued.

Regulations as to cultivation and residence duties are now prepared and will be published in a few days. These are of a character that will ensure permanency of occupation together with the development of large unoccupied areas in the west. The future of the returned soldier naturally depends largely upon himself. His life at the front, filled with the fury of turmoil and heat of battle, will possibly affect him materially in his first efforts in the quiet atmosphere of the farm; and the aim of the board is to surround him with such comforts and freedom from worry that will assist him in his efforts as a homesteader. This policy will, no doubt, meet with general approval.

The soldier settlement board announces that a number of veterans who are locating on homestead lands in the west, and who have selected the lands which are suitable for their purpose, desire to exercise their right of civilian homestead entry and their soldier right on adjoining quarter-sections. Further, there are a number of veterans who already hold homesteads and who desire to take up an adjoining quarter-section as their soldier grant. It has been decided to allow priority of right of entry on a vacant adjoining quarter-section to a veteran making or holding a homestead entry. Since the veteran has both a civilian and a soldier right of entry, it is deemed that the right to locate these on adjoining quarter-sections, wherever it is possible to do so, is of primary importance to him, and this privilege is, therefore, being granted.

If there are conflicting applications for the same quarter-section, from veterans, such applications are to be referred to the head office for decision.

Advancement of Loans.

Naturally the advancement of loans to the returned soldier requires regulations well considered and uniformly operative. Messrs. Roland and Ashton, of the soldier settlement board, have just returned from Western Canada and report that satisfactory arrangements have been made whereby legitimate advances to bona fide applicants can be promptly made.

Provincial officers have been opened in the three prairie provinces at Winnipeg, Regina and Edmonton. Supervisors are in charge and are all ready to receive and deal with applications for land and loans. The regulations governing the advance of loans will be given publicity almost immediately.

A good understanding now exists all round. The soldier realizes the fact that the soldier settlement board work is one of the biggest war problems undertaken in Canada. The government was fortunate in having a minister capable of dealing with all the problems in a comprehensive and satisfactory manner, legal and otherwise.

A WOMAN'S WILL

Nowadays it is just as important that Women should make Wills as Men. Every Woman who owns property should have her Will carefully drawn by a Solicitor and, above all, she should appoint an Executor who is competent and dependable.

This Corporation, with thirty-six years' experience in the management and care of Estates of every nature, combines all the necessary qualifications of a satisfactory Executor and Trustee.

The Officers of the Corporation will be pleased at any time to discuss this important matter with you.

(Formerly The Title and Trust Company)

Is authorized to act as Administrator, Receiver, Executor, Liquidator, etc., without giving security.

An estimate of the Company's charges for acting in any Trustee Capacity will be gladly given. Enquiries solicited.

Board of Directors

E. F. B. Johnston, K.C., *President*. Hon. W. A. Charlton, W. J. Gage, Noel Marshall, *Vice-Presidents*. W. K. George, W. R. Hobbs, Jas. B. Tudhope, R. Wade, Jacob Kohler, A. McPherson, D. B. Hanna, John J. Gibson, *Managing Director*.

Chartered Trust and Executor Company
Traders Bank Building Toronto

In Appointing Your Executor—

Let us suggest that you write or ask for YOUR copy of our recently-published brochure on WILLS. It will interest you and give you conclusive reasons also for the appointment of a corporate instead of an individual Executor and Trustee.

Ask at the same time for YOUR copy of farm land listings. These are assets arising out of estates in process of being wound up and where it is necessary to realize. Prices and terms moderate.

The Standard Trusts Company
Standard Trusts Bldg., 346 Main St. WINNIPEG

Canadian Guaranty Trust Company
HEAD OFFICE: BRANDON

Board of Directors:

ALEX. C. FRASER, President.
LT.-COL. A. L. YOUNG, Vice-President.
JOHN R. LITTLE, Managing Director.

HON. GEORGE W. BROWN, WILLIAM FERGUSON, H. L. ADOLPH, E. O. CHAPPELL, J. S. MAXWELL, JNO. A. McDONALD, G. S. MUNRO, HON. W. M. MARTIN, M.P.P., JOHN E. SMITH, F. N. DARKE, ALEX. A. CAMERON, D. A. REESOR.

Acts as Executor, Administrator, Trustee, Liquidator, and in any other fiduciary capacity.

How a Trust Company Can Save Money for Your Estate:—

"It is generally admitted that one of the advantages of a trust company as executor is that by means of its organization the moneys of an estate are more rapidly, more safely, and more judiciously invested than by a private executor, who has not the same facilities for securing investments.

"For example, this Company has a very complete organization for investing funds of estates in first-class mortgage loans. The property offered as security in every case is inspected and valued by one of our own inspectors, whose expenses are paid by the Company direct, and not charged as disbursements against the estate. This is only one of many cases which might be mentioned to show how the employment of this Company's service results in saving to estates under the Company's care."

(From a letter by a Trust Company official.)

CANADIAN PROBLEMS AFTER THE WAR

Necessity of Keeping in Touch With Markets—Problem of Labor—Canada Will Be Put to the Test

In an article in Marketing for April, Prof. W. W. Swanson makes some interesting observations which should be of great interest to the business men of Canada. He points out how very necessary it is for the manufacturers to ever bear in mind that now is the time to prepare for the new conditions that will obtain after the war. The article follows:—

No doubt the most imperative duty of Canada at present is the bending of every energy and the exertion of every effort toward the winning of the war. Nevertheless, it is false counsel, and futile as well, to suggest that plans for business expansions should be postponed until the conclusion of hostilities. Indeed, it is scarcely less imperative to prepare for post-bellum conditions than to throw ourselves heart and soul into the winning of the present struggle. War is abnormal, and the carrying on of commerce and trade, as well as agriculture, the essential and normal business of the people. And unless attention is concentrated on the problems of production and distribution, right here and now, a staggering situation, fraught with dire menace, will face the country when hostilities shall have ceased.

Nor will it suffice to let well enough alone. True, orders have poured into our manufacturers and farmers for a hundred and one different products—from cheese and hides and wool to textiles, shells and ships. In sum total, since the outbreak of war, these orders have amounted to not less than $1,800,000,000, more than $1,000,000,000 coming from the Imperial Munitions Board alone. Industry has been keyed up to the highest point of efficiency, and Canadian enterprise subjected to the acid test of war. To their everlasting honor the manufacturers, bankers, merchants and farmers of the Dominion have measured up to the task with which they were confronted, and have proved beyond any possibility of doubt that the economic structure of the nation rests upon deep and solid foundations. This in itself is a great achievement.

What of the Future?

It is no way out to imagine or say that the future will take care of itself. The Great Powers of the world, in the midst of the stress and strain of war, have concentrated on the problem of production and distribution after peace has been signed. The Central Powers have devised a grandiose, though none the less menacing, scheme for the formation of an economic league, dominated by Germany, which will exploit the resources of that vast territory stretching from the Baltic to the Persian Gulf. The United Kingdom, France, Italy and the United States have forged in the fires of war economic instruments that will not be discarded with the signing of peace. The United States, in particular, has devoted time and money, under federally constituted boards and committees, to the gathering of data and the preparing of plans for marketing United States products in South America, Asia, Australasia and the Old World. As yet we in Canada, as far as the extending of our trade is concerned, have planned little and accomplished less.

It is patent that the sudden withdrawal of war orders from Canadian industry will spread paralysis through the nation's entire economic life. As already remarked, war is abnormal and peace normal; and it is for conditions of peace, therefore, that active preparations must be made. What, then, is to be done?

Keep in Touch with Your Markets.

First and foremost, it is the imperative duty of every manufacturer, banker and trader to keep his goods and services familiar to the public eye and in constant use. Many there are, so obsessed with the glamor of war orders and the factitious prosperity arising thereby, that they fail to appreciate, or even to understand, the vital significance and value of the marketing problem. Now, the marketing problem is almost solely a selling problem; and the greatest instrument yet devised by the brain and ingenuity of man for the efficient and rapid marketing of products is advertising. It is a penny-wise, pound-foolish policy to cut down on advertising appropriations merely because business, for the moment, is brisk, or because plants are employed to full capacity on war orders. Cease to appeal to the world, and the world will cease to appeal to you—for your products.

An even heavier responsibility, however, rests upon the government, whether provincial or federal, for the maintenance of the Dominion's economic stability after the war. It is wise policy to cut down all unnecessary public expenditures and to refuse to undertake great public works during the course of the war. Such a plan is both sound and wise, because the nation's financial resources must be made available at present for the winning of the war, and because the labor supply is fully engaged in private industry. With the coming of peace, however, a totally new situation will have been created. The process of demobilization will turn on the labor market between 350,000 and 400,000 soldiers, who must be employed again in the various trades and professions for which they have trained themselves in days gone by. Thousands of women and girls, as well as men, now engaged upon war orders, will look for employment elsewhere. It is not to be expected that Canadian industry, overnight, can adapt itself to such a great and precipitate change. The shock of war in 1914 proved too great for the trade and commerce not only of Canada, but of such a powerful and rich nation as the United States—a nation, moreover, which was not then at war, and that had no intention of entering the field as a belligerent. Thousands, and tens of thousands, of men were thrown out of employment and the commerce and trade of the continent paralyzed.

The Employment Problem.

It is essential, then, that each governmental authority in the Dominion not only hold over public work for the employment of labor at the signing of peace, but that the municipalities, the provincial governments and the federal government prepare plans now to undertake necessary and productive work when war orders cease, and when trade and commerce must be re-established along new lines.

It is sometimes thoughtlessly said that Canada has already too great an economic equipment for its present requirements—that the nation has overbuilt its railroads, undertaken too large a development of municipal utilities, and that extravagant and wasteful expenditures have been made on port and harbor construction. The contrary, nevertheless, is true. There has been a useless and costly paralleling of railway lines in certain sections of the country; but the west in particular is far from being overbuilt with railways. The Hon. J. A. Calder, recently minister of railways for Saskatchewan, estimated that that province alone requires an additional mileage of branch lines, to meet immediate requirements, of not less than 5,000 miles. The simple truth is that the nation's economic equipment has scarcely sufficed to meet the demands placed upon it by the war.

It is abundantly evident, therefore, that the various public authorities can economically undertake the construction of many public works at the close of hostilities. By so doing the threatened labor surplus, as well as the threatened unemployment, cannot materialize. Public enterprise will provide a demand for the innumerable commodities furnished by wholesalers, manufacturers and other producers; and as these orders are received the ordinary trade and commerce of the nation will revive. Trading, banking and merchandizing will, under this policy and by this process, follow their normal course; and the possibility of waste and loss and economic dislocation be largely, if not entirely, eliminated.

What is Needed Now.

The plain fact is that, if the country formulates a wise and sound policy now, there need be not even a temporary industrial and commercial depression at the close of the war. In the coutnry's industries the crisis will have been passed within a year or two after peace is signed; for it is quite patent that Europe must undertake a huge programme of economic reconstruction to make good the ravages of war. Aside from the great housing reforms promised for the United Kingdom—reforms that call for the spending of not less than $300,000,000 sterling for the building of cottages alone—everywhere throughout the war area in Europe a huge building programme must be inaugurated. Be it recalled, in this connection, that not a single commodity—with the sole exception of steel—has been increased in quantity throughout the whole world, during the period of the war. There is a heavy shortage of textiles of all kinds, of building materials, of brick and stone, of lumber and ironwork, of reinforcing materials, and scores of other vitally essential products. In the making good the depleted stocks of goods in Europe, Asia and America, Canadian manufacturers and traders should play a not inconsiderable role.

There is further ground for optimism when the possibilities, both present and future, of the prairie provinces are considered. The Hon. Charles Dunning, provincial secretary for Saskatchewan, estimated in his last budget speech that the annual output of products, mainly agricultural, of that province has now passed the $400,000,000 mark. And be it

recalled that only about 15 per cent. of the land is under cultivation there, that the natural resources of the province have scarcely been scratched. Contrary to general opinion, Saskatchewan is destined to be a great stock country also, even now ranking second in the number of head of stock possessed by the Canadian provinces. Alberta is prospering as never before in its history, the phenomenal prices for cattle and sheep bringing tens of millions of dollars to her farmers. The war found the west stagnant, with building and construction of all kinds dead. Practically nothing has been done in the way of added construction of buildings or the development of public utilities in the west since the outbreak of war; and it is safe to say that when once more the tide of European immigration flows to the prairie provinces an era of expansion will set in such as has never been witnessed before in the history of the Dominion.

It is clear as crystal that Canada's economic equipment will be put to the test, even more severely than during these days of war, in the immediate future when home-seekers once more flood the prairies. It is high time, therefore, to put an end to carping criticism against the so-called extravagance of the decade of construction that ended with 1914. The facilities provided and the public works undertaken in the towns and cities of the West will scarcely suffice to cope with the after-the-war immigration problem. There will be ample scope and opportunity in the domestic market, particularly in the territories already developed in the west and in the pioneer Peace River country—an empire in itself—for the marketing of the major part of the products of eastern Canada. Especially will this hold good if prices rule high for the output of western farms, and for the great cash crop, wheat, at the close of the war.

Peace and Prices.

And all indications point toward prices remaining on a high level after the signing of peace. Space will not permit of our discussing this question in detail at present, and it must suffice to deal very briefly with the problem. It is a truism to assert that the trade of the world is an economic unity, and that economic forces make their effects felt everywhere. This truth is doubly significant at the present juncture. Manifestly—and as has been remarked above—there will be a dearth of all important, basic economic goods at the close of the war, especially in Europe. This under-supply inevitably will make its effect felt on this continent, both in Canada and in the United States. This factor in the situation is so obvious that it needs no special emphasis at the present time; but what is not so plain is the vital and significant role that money and credit will play in the determining of commodity prices in the years immediately following the close of the struggle.

Consider this one significant fact: that the leading Great Powers of Europe, the United Kingdom, France, Italy, Germany and Russia, had, at the outbreak of war, paper money issues amounting to $2,500,000,000; and that these paper money issues have since been increased to more than $19,000,000,000. A careful consideration of these figures will bring home, as nothing else, the undeniable truth that Europe, in particular, and all those countries coming within the scope of western civilization, in general will experience high prices after the signing of peace. This is inevitable, as one realizes on reflecting that the whole of Europe, with the exception of the United Kingdom, has, since the outbreak of hostilities, abandoned the gold standard. And it will be a long time before the finances of continental Europe can be so rehabilitated as to permit the re-establishment of the gold basis.

Effect of Paper Currency.

All history goes to prove that a paper standard, unsupported by gold, makes for high prices. During the Civil War the United States issued only $450,000,000 in inconvertible paper money—the so-called "greenbacks"—and yet, in July, 1864, when there could be no doubt concerning the ultimate triumph of the North, it took $2.85 in paper to buy $1 in gold; or to put the facts in another way, current prices had, practically trebled. While the United States, like the United Kingdom, is at present on a gold basis, they are only two Great Powers in that position; and it follows, therefore, that high world prices caused by monetary and credit inflation will make their effects felt throughout the whole world.

It is clear, then, that there need be no sudden decline in prices, no financial panic, and no business depression at the close of the war if the right measures to prevent the latter arising are taken now. We have briefly outlined what may be accomplished under direct government action and control. Nevertheless, a duty—a serious and solemn duty—rests upon every business man in the Dominion, here and now, to do his part in maintaining and increasing the country's prosperity and business. This will be accomplished by planning to resume normal manufacturing, trading and financial activities at the earliest moment possible after the conclusion of war. Keeping goods and services before the eye of the public is not the least important of the measures necessary to accomplish these patriotic, as well as plain business, objects.

CANADIAN RAILWAYS AND CANALS

Summary of Dominion Expenditure—Intercolonial Earns Surplus for 1917—Progress of Hudson Bay Road

According to the annual report of the Department of Railways and Canals for the year ended March 31st, 1917, the total expenditure of the Dominion government for railways and canals was $48,226,082.40, of which just about $6,000,000 was for canals. The revenue for the year was $24,001,181.75, only about $500,000 of which came from canals. The total expenditure on railways and canals and revenue from them, up to March 31st, 1917, is as follows:—

Expenditure on railways	$734,998,814.43
Expenditure on canals	164,140,734.44
Expenditure common to both	1,457,384.31
	$900,596,933.18

Revenue from railways	$248,395,298.47
Revenue from canals	16,665,271.32
	$265,061,569.79

The railway expenditure for the year ended March 31st, 1917, included $14,737,326.70 charged to capital account. This consisted of expenditure on the Quebec bridge, the Intercolonial Railway, the National Transcontinental, the Prince Edward Island Railway, the Hudson's Bay Railway, and other items. The expenditure on the Intercolonial on revenue account was over $15,000,000, on the Prince Edward Island over $800,000 and on the National Transcontinental almost $8,000,000.

Of the expenditure on canals, $4,304,589.09 was chargeable to capital account, the balance being on account of income, staff and repairs. The government railways in operation, and their main lengths were respectivedy, as follows:—

	Miles.
Intercolonial	1,518.39
Prince Edward Island Railway	275.20
National Transcontinental Railway	1,811.28
Grand Trunk Pacific Railway	191.75
New Brunswick and Prince Edward Island Railway	36.05
International Railway of New Brunswick	111.30
Total	3,943.97
St. John and Quebec Railway, operated but not owned	119.87
Total	4,063.84

The earnings of the Intercolonial were $16,767,386.89, or a surplus of $1,112,829.11 over working expenses. Those of the Prince Edward Island Railway were $630,045.69, and a deficit of over $200,000 was incurred on this account. Earnings of the National Transcontinental were $5,916,550.99, or almost $2,000,000 less than expenses. The total earnings average $5,853.38 per mile, $1.86 per train mile, or $11.30 per car mile.

Regarding the Hudson Bay Railway, the report states that over 80 per cent. of the track had been laid, and gradings completed with the exception of about 11 miles.

The Home Assurance Company of Canada has been incorporated with a capital of $500,000, with head office in Edmonton, Alta. The organization meeting will be held shortly, and the directorate will include several well-known Edmonton and Calgary men. The company has wide powers to write all ordinary lines of insurance. They will go into the field as a fire company about July 1st.

STEEL COMPANY OF CANADA

The annual report of the Steel Company of Canada for the year ended 31st December, 1917, appears on another page of this issue. The gross profits for the year were $6,040,318.83, or about $1,000,000 more than for last year. Interest and dividends amounted to $1,659,944.40. Reserves were set aside for bond sinking fund, depreciation, fire insurance, betterment and replacement, etc., and the balance carried to profit and loss account.

The past three years have been increasingly successful ones for this company, the gross profits for the years 1910 to 1914 having ranged only from $500,000 to $1,700,000. All the contracts for the by-product coke oven plant at Hamilton have been let, and the company hopes to be producing coke about November, 1918. During the year two ore properties were secured, jointly with other steel companies, one on the Mesaba range and the other on the Gogebic range. It is expected that enough ore will be derived from these properties to suffice half the company's requirements for a number of years. A mill for making steel sheets has also been installed and is now in operation. The company's plants were fully occupied throughout the year, although some difficulty was experienced from time to time on account of delays in transportation and severity of weather.

It is also pointed out that over $3,000,000 have been paid by the company in duties. War bonds have also been purchased, and during the last year $55,000 contributed for patriotic purposes.

SHIPBUILDING IN AUSTRALIA

Recently the expert engaged in England to supervise the Commonwealth government's shipbuilding scheme arrived in Australia and is now completing his examination of the various federal, state and privately-owned plants and yards. It is anticipated that an early start will be made with shipbuilding within the Commonwealth.

The Commonwealth government has extensive yards at Sydney; the state government of New South Wales has a plant at Newcastle, and the state government of Victoria has extensive yards at Melbourne, all of which (independent of the federal shipping adviser) are managed by competent steel shipbuilders with practical experience in British yards.

It is announced that there will be sufficient steel in Australia to build seven steamers. At the outset some imported materials will be used, but the bulk of the steel will be supplied by the Broken Hill Company's steel works at Newcastle, N.S.W., which, with subsidiary or associated companies, will ultimately be in a position to furnish all the structural steel for the framing and plates required for the construction of steamers in Australia.

The work will be apportioned to the yards in the several states, and, while no authoritative statement has yet been made as to the size and class of the steamers, it is considered by experts having knowledge of the facilities available that the initial vessels will be about 330 feet long by 48 feet beam, with a carrying capacity of about 3,500 tons.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The following table, compiled by *The Monetary Times*, shows the volume of bank loans to municipalities since January, 1915:—

	1915.	1916.	1917.	1918.
January	$35,952,805	$32,015,371	$24,487,272	$40,015,466
February ...	38,437,903	35,149,915	26,121,324	43,535,628
March	41,227,449	38,649.462	29,877,911	50,652,061
April	43,031,360	44,371,050	35,931,996	....
May	43,948,436	43,924,036	39,790,191	....
June	46,889,816	46,773,032	42,757,673	....
July	44,029,446	42,385,096	43,989,207	....

Chatham, Ont.—During the past few weeks about $45,000 of Chatham debentures have been sold by the city direct to local investors.

Sandwich, Ont.—Messrs. A. Jarvis and Company, of Toronto, have been awarded a block of $30.000 6 per cent. bonds, payable in 25 annual instalments.

Hamilton, Ont.—The city is calling for tenders for the purchase of $346,040 city of Hamilton 6 per cent. debentures, payable in 10 annual instalments, interest payable half-yearly.

Bruce County, Ont.—The county offered for sale about the middle of April $65,000 of bonds. The whole issue was disposed of in the county in less than ten days, one township taking one-third of the issue.

Tisdale, Ont.—Messrs A. E. Ames and Company, of Toronto, have been awarded a block of $58,000 6 per cent. bonds payable in fifteen annual instalments. These bonds are guaranteed by the province, and the proceeds will be used for school purposes.

Kitchener, Ont.—Tenders will be received by the township clerk up to noon Friday, May 24th, for $7,000 debentures payable in twenty-five equal annual instalments, bearing interest at 6 per cent. The purpose of this is to buy a site, build and equip a two-room school in S.S. No. 8, Fitzroy Township.

Montreal, Que.—It was announced on the 4th inst., by Mr. LaFontaine, secretary-treasurer of the Catholic School Board of Montreal, that almost $2,000.000 of the $2,500.000 loan has been subscribed for. The period for receiving subscriptions extends to the 15th inst., and he is confident that the remainder will be taken up by that time.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from April 15th, to 26th, 1918:—

School Districts.—Plenty, $1,700 10-years not ex. 7 per cent. instalment; A. M. Percival, Plenty. *Riverdene, $1,200 6-years not ex. 8 per cent. annuity; W. R. Miller, Cabri. *Gabriel, $1,900 10-years not ex. 8 per cent. annuity; E. J. Boyer, Batoche. Freeman, $2,000 10-years not ex. 8 per cent. instalment; A. P. Simpson, Rhein. *Margo, $2,000 10-years not ex. 8 per cent. instalment; A. Laurie, Margo. Hodson, $1,000 5-years not ex. 8 per cent. instalment; A. T. Gray, Froester. Canada, $1,600 10-years not ex. 8 per cent. annuity; C. Oliver, Albertown.

Rural Telephone Companies.—Holyrood, $9,900 15-years not ex. 8 per cent. annuity; S. W. Lambert, Parkbeg. Hillburn, $3,400 15-years not ex. 8 per cent. annuity; R. S. Lloyd, Rocanville. St. Gregor, $13,000 15-years not ex. 8 per cent. annuity; A. V. Lenz, St. Gregor.

Village.—Loverna, $3,000 5-years not ex. 7 per cent. instalment; J. A. Harding, Loverna.

The following is a list of debentures reported sold from April 15th to 26th, 1918:—

School Districts.—Flower Valley, $400; Wm. Mensch, Shellmouth. Claudia, $1.200; C. H. Burgess and Company, Toronto. Golden Sheaf, $400; Bond and Debenture Corporation, Winnipeg. Arras, $200; Rosetown Sinking Funds. Nemaha, $1,200; Goldman and Company, Regina.

Rural Telephone Companies.—Eclipse, $10,600, River Ayr, $3,200, Industrial, $800, Phippen, $5,800, Liberty, $5,000, North Redvers, $1,200; W. L. McKinnon and Company, Regina. Radford Lodge, $6,200; Nay and James, Regina. Belfast, $600; Bond and Debenture Corporation, Winnipeg.

Village.—Leipzig, $700; W. L. McKinnon and Company, Regina.

Rural Municipality.—Enterprise, $5,000; Nay and James, Regina.

---

*Being sold by the Local Government Board.

NORTHERN CROWN BANK TRANSFER

At the special meeting of the shareholders of the Northern Crown Bank, held at the head office on May 7th, the proposal for amalgamation with the Royal Bank of Canada was unanimously and heartily ratified.

It has been arranged that the actual transfer will take place at the end of the calendar half-year. All branches of the Northern Crown will become branches of the Royal Bank when they open for business on July 2nd. Under the merger the Royal will get 113 new branches, very few of which will be closed. This will give the Royal a total of 536 separate offices.

FIRE INSURANCE LOSS IN ALBERTA

Annual returns from the fire underwriters of the province of Alberta, as shown in the reports of the insurance department of the provincial government, show the losses for 1917 to have been $853.787.98, while the premiums were $2,556,816.78. This is a remarkably good showing for losses, nearly $200.000 less than the year previous.

Premiums for 1916 were $2,170.146.53 and the losses $1,042,492.63. The losses for the first three months this year are considerably greater than for the same period last year also, reports R. L. Nicholson, who is in charge of the provincial insurance branch.

CHANGES IN BOND FIRM

Mr. J. B. Ferguson has withdrawn from the firm of Ferguson, Sanson and Graham in order to devote himself exclusively to his personal affairs. The business will now be conducted under the name of Graham, Sanson and Company, with offices in the Toronto General Trusts Building, 85 Bay Street, Toronto. Mr. D. M. Sanson was in the banking business for twenty years, and was at one time manager of the Bank of Commerce at Dawson City. Mr. Sanson has also had broad experience in manufacturing. Mr. F. R. Graham is also a former banker, having been ten years in the service of the Trader's Bank before its amalgamation with the Royal, and latterly as assistant manager at Toronto. Following this, Mr. Graham was connected with A. E. Ames and Company, which house he left in 1914 to go into business for himself. This firm has just issued a booklet, entitled "Investing by Mail," which points out the advantages of securing high-grade investments at present prices, and also contains offerings of government, municipal and industrial securities.

THE LIBERTY LOAN

The third Liberty Loan of the United States was closed on the evening of May 4th, and, according to the treasury announcement, it was an overwhelming success. The aggregate was expected to be nearly $4,000,000,000. The formal goal of the campaign was $3,000,000,000, and subscriptions amounting to somewhat more than that had already been reported. It has also been estimated that there were 17,000,000 individual subscribers. The Bank of Montreal in New York subscribed for $604.900 of the loan. The effect of the loan upon municipal borrowing is shown by the fact that the municipal bond issues for April were less than for any month since August, 1914, and were less by 50 per cent. than the municipal issues of the previous month of March. The issues for the first four months of 1918 are just over seventy million dollars, whereas the total for the same four months was over $100,000,000 from 1908-17, inclusive, and over $200,000,000 from 1914-16, inclusive.

MORTGAGE CONDITIONS IN ALBERTA

Decided Improvement During Past Two Years — Farmer Mortgagors Benefit by Good Harvests

"Mortgage conditions in Alberta, and particularly those relating to farm investments, have shown a decided improvement during the last two years," said Mr. Wm. Toole, of Calgary, in his address before the Alberta branch of the Dominion Mortgage and Investment Association, at their annual meeting. "The last three bountiful harvests, with the increased prices for all kinds of agricultural products," he said, "have enabled the farmer mortgagors to pay arrears of interest and make satisfactory reduction in past due principal, and at the same time add extensively to the permanent improvements. Owing to the uncertainty of labor, caused by the exceptionally heavy voluntary enlistment in this province for active service during the earlier period of the war, there has not been the increase in cultivation that otherwise would have taken place under such favorable agricultural conditions. Nevertheless, the area of 'raw' prairie land brought under cultivation during the last two years is encouraging. Last year the largest area of virgin prairie, summer fallowing and fall ploughing was prepared for seeding this spring, in the history of the province for any one year, and better still, is the known fact that the land was cultivated in a careful, experienced manner, so that with average precipitation and usual climatic conditions, we are justified in anticipating another good crop this year.

Livestock Industry.

"The past three years have also been ideal for the livestock industry and have given a great impetus to the improvement propaganda which has been going on for some time. If the importation of pure-breds continues, and the influx into Alberta of breeders of registered stock keeps up as it has during the last year or two, Alberta will be the livestock province of the Dominion in a very short time. Nothing tends to enhance the value of farm mortgage security so much as improvement in livestock. It matters not to which particular breed the farmer directs his energy, so long as the tendency is to improve, for then there is a thrifty and contented settler and an example to his neighbors. Persons not familiar with the difficulties encountered in lending money in a new country will not appreciate to the fullest extent the great benefit an industrious and experienced farmer is to a new settlement. A good stockman is usually a successful mixed farmer, but those who devote the greater portion of their energy to grain growing are apt to neglect their stock, which has proved to be a very serious financial mistake.

"No part of Canada enjoys the same natural advantages for agricultural development as Alberta, and as the years go by will need more mortgage money to assist in making homes for the millions of prosperous and contented citizens who will eventually be engaged in the development of our farm and ranch lands.

"The territory contiguous to the Rocky Mountains known as the 'Foot Hills' country, is a veritable paradise for livestock. With its abundant and luxuriant growth of grasses, mountain fed streams and springs of the purest water, the natural shelter against storms, this character of country affords livestock is also a valuable asset. The country not immediately within the 'Foot Hills' has proved to be better adapted to grain growing and mixed farming.

Disposition of Farmers.

"Another very important condition in connection with mortgage investments in Alberta is the increasing permanent disposition of our farmers. Only a comparative few years ago the newcomers, and many of those residing in the then outlying districts, did not hesitate to state they were working so to speak under sufferance and when sufficient capital had been accumulated to enable them to start farming in their native locality, they would return. This migratory spirit was bad for the country, and the farms of these people did not offer very attractive security for mortgage investment. Those sentiments and conditions have quite changed during the last ten years and 'homes' are being established and constantly improved, as in other parts of the world. Rural telephones and motor cars bring the distant places within easy access of markets, doctors, nurses and suchlike, while the many modern conveniences whereby the farm house can be as comfortably equipped as those in the towns and cities have added tremendously to the comforts and contentment on the farm.

"Remarks to a gathering of this kind where practically all the mortgage capital invested in the province is represented, would not be complete without drawing attention to the results of the annual bull sale and horse show, which recently took place in Calgary. This was the 18th annual auction sale of bulls—all bulls entered must be sold, if, in the opinion of the management, the bid is fair. After two days of judging and exhibition the sale commenced—entries were 856 bulls, the largest known number for one sale of registered animals—792 were sold for $212,325, an average of $268.09. It is worth while noting as an indication of the desire of the management to better the cattle industry, that 31 bulls were culled back by the censor, not being considered up to standard or in poor condition; 131 carloads were shipped by 247 owners from 85 different stations; 44 bulls were led in from farms close to Calgary. The sale was continuous mornings, afternoons and evenings for three days. The bulls were bought by 519 purchasers living in different parts of the province; 74 bulls were shipped out of the province to Saskatchewan and British Columbia.

"The horse show was as great a success; 743 entries, but even this number does not convey an adequate idea of the benefits resulting therefrom. It is the week of the year when farmers and ranchers come to town to buy or exchange stallions, brood mares and other horses.

Development Creating Splendid Province.

"In 1916 the agricultural products realized the sum of $170,725,650, and for 1917 $260,596,804, an increase of practically $90,000,000. Even these figures might not drive home as they should to an outsider the extraordinary permanent development which is annually taking place and which is creating such a splendid province for capital investment. Too many people attribute this prosperity to the high price of wheat. Alberta is a mixed farming province as the following analysis of last year's returns will indicate:—

Animals slaughtered and sold	$ 45,000,000
Dairy products	25,000,000
Wool clip (2,086,633 lbs.)	1,181,682
Game and furs	2,000,000
Horticultural	175,000
Poultry and products	3,500,000
Wheat	108,000,000
Oats	50,000,000
Barley	10,000,000
Other crops, grains and roots	15,740,122

"There are many other reasons why mortgage money is not in the active demand it was a few years ago. It should also be remembered, however, that the banks are lending more freely and on easier terms to the farmers than ever before, and the assistance the farmers have been receiving from the governments and other organizations during the past couple of years has enabled them to increase their livestock on easy terms of payment, and this has had a great tendency in lessening the demand for loans from the mortgage companies.

"It is encouraging to note, however, the tremendous amount of permanent improvements and betterment of livestock which is taking place. When conditions are again normal and labor and other anxieties over the expansion which must necessarily take place will create a better and safer field for mortgage investment than ever before, and the farmers and ranchers of Alberta certainly will have the goods to deliver."

MONTREAL EXCHANGE CANDIDATES NOMINATED

Nine candidates have been nominated for the committee of six "managers" elected annually by the Montreal Stock Exchange. Two names have been entered for the post of secretary-treasurer. There will be no contest for the chairmanship and vice-chairmanship of the exchange. The slate to be voted on at the annual meeting is as follows: Chairman, Edward M. Smith; vice-chairman, C. Simpton Garland; secretary-treasurer, M. C. Oswald and C. J. Hodgson. Managers—C. H. Branchaud, A. Bruneau, C. E. Gault, R. O. Johnson, T. W. McAnulty, P. McDougall, A. Paterson, B. H. Porteous and G. W. Smithers.

All nine members of the outgoing committee of officers and managers have been renominated for one post or another.

The Great North Insurance Company, of Calgary, are entering the province of British Columbia, writing live stock insurance.

AUTHORITY OF BANK MANAGERS

Liability of Bank for Actions of Branch Managers—Relations to Stock Transactions

BY M. L. HAYWARD, B.C.L.

The case of Mackintosh vs. the Bank of New Brunswick, recently decided by the Supreme Court of New Brunswick, and reported in Volume 42, New Brunswick Reports, on page 152, raised some interesting points in reference to the authority of branch managers of Canadian banks, the liability of the bank for the actions of such managers, and stock transactions in general.

In this case, Mackintosh and Company were stock brokers, having their head office at Halifax, with a branch office at St. John, and the Bank of New Brunswick had its head office at St. John, with a branch in that city known as the Market Branch, managed by one, Harry B. Clarke. In June, 1909, Clarke, on his personal account, began dealing in stocks on margin through the Mackintosh St. John office, and by the month of September he owed them $19,000, for which they held as collateral stock worth $16,000. It was then agreed between Clarke and Mackintosh and Company, that he should pay them $125 per month, which payments he made for some nine or ten months. Then in December, 1910, the market looked favorable to Clarke, and he again began dealing in stocks and cotton on margin through the Mackintosh St. John office.

A little later, in February, 1911, Clarke agreed with one McBeth that the latter should join Clarke in his cotton speculations on the terms that McBeth was to furnish such collateral as Mackintosh and Company should require, bear all losses which might be incurred, and hand over to Clarke half of the profits which might be made. McBeth then handed to Clarke 43 bonds of $1,000 each and gave Clarke a letter to Mackintosh and Company, stating that the bonds were to be used as collateral against Clarke's account. Clarke then handed over the bonds to Mackintosh and Company and they gave Clarke a credit of $10,000.

Later on in the month of March, 1911, Mackintosh and Company objected to the bonds as collateral, on the ground that they did not like to hold unlisted securities in this way, and Clarke then wrote a letter to them stating that "we hereby agree to redeem them (the bonds) at 80 at any time you may wish to call for them," and signed the same "for the Bank of New Brunswick, Market Branch, Harry B. Clarke, Manager."

In the meantime Mackintosh and Company were carrying Clarke's cotton transactions in an account with Clarke and McBeth and the stock transactions in Clarke's separate account. The cotton transactions showed considerable loss and Mackintosh and Company were pressing Clarke for a payment on the joint account or for security for the $10,000 loan.

About this time one Collins appeared on the scene and stated to Mackintosh and Company that he had money on deposit at the Market Branch of the Bank of New Brunswick, and would give Mackintosh and Company his cheque to be held as additional collateral, and later on Collins gave them a cheque on the Market Branch of the Bank of New Brunswick for $10,000 stating that the cheque could be certified and held as collateral against the account.

This cheque was sent to the Market Branch of the Bank of New Brunswick and certified by Clarke at a time when Collins' account was overdrawn $13,000, and no entry of this cheque, or of its certification was ever made in the bank books.

Clarke, McBeth and Collins then left the province and Mackintosh and Company brought action against the Bank of New Brunswick on the cheque and also on Clarke's agreement to redeem the bonds at 80 at any time Mackintosh and Company might call for them.

The bank in their defence sent up the following claims:—

1. That the circumstances under which the cheque and letter were given to Mackintosh and Company were such as to put them upon inquiry as to Clarke's authority to bind the bank, and that the bank could not be bound by the letter under any circumstances, as it was not "banking business" within the meaning of the Bank Act.

2. That the cheque and letter were given in payment of a debt which was a stock gambling debt in violation of the criminal code.

On the question of Clarke's authority to certify the cheque and to give the letter in reference to the bonds, it was admitted by all parties that he had no actual authority from the bank to do so, that he did not inform his superiors of this transaction, and that no record was made in the bank books.

Manager Had No Authority to Bind Bank.

On this point the Court held that Clarke, the manager, had no authority to bind the bank, and that Mackintosh and Company must have known that the cheque and letter were for Clarke's personal benefit.

"I agreed that the bank," said the Court, "in placing Clarke in the position of manager of its Market Branch, must be taken, as between the bank and the public, to have clothed him with all such powers as its agent as by the common practise of banks are bestowed upon the manager of such a branch, and which, consequently, the public generally, and every person dealing with the bank through such agent, has a right to assume such agent possessed, in the absence of any notice of a limitation of such powers. But such manager is not held out by the bank as authorized to make it liable for personal debts, or to engage its credit in furtherance of the personal business of its agent; for it is, I take it, sound law that in the absence of actual authority so to do, an agent cannot bind his principal when the matter in which he assumes to act, is one in which, to the knowledge of the person with whom he deals, he is really acting in furtherance of his own interests and not exclusively in those of his principal."

On the claim that the transactions were gambling transactions within section 231 of the code, the Court said:—

"Having reached the conclusion stated, it is unnecessary for me to consider other grounds of defence urged by the defendants. I may say, however, in reference to the defendants' claim that they are not liable because the cheque and 20th March letter were given in connection with and in furtherance of gambling transactions made criminal by section 231 of the Criminal Code or failing that, illegal at common law, that I think there is nothing in such contention, in view of the testimony as to the mode of dealing carried on through the New York Exchange."

ALBERTA OIL DEVELOPMENT

That the Standard Oil Company is taking an active interest in the development of the oil fields of Northern Alberta was the information recently given by Dr. J. K. McLennan, vice-president of the Edmonton, Dunvegan and British Columbia Railway.

The Imperial Oil Company, as the Canadian subsidiary company is known, has staked something like ten square miles of land on the Alberta and Great Waterways line, near Fort McMurray. Active development is contemplated, and several carloads of machinery sent. The number of test wells that will be drilled is not known.

Dr. McLennan recently was at Peace River, where most encouraging reports have been received from the second well of the Peace River Oil Company, generally known as the "McArthur Well." This Peace River field is separate and distinct from the Fort McMurray field, where the Standard Oil Company and a big California outfit are interested.

Dr. McLennan says that everybody in Peace River is enthusiastic about oil. Every available cent of loose change in the town has been invested in oil leases.

"The field will be given a real test this year," said the doctor. "In addition to the McArthur well, there are several other outfits on the ground. There is oil there, and no one doubts it, but whether this is the exact spot where the big field is located will not be known until the test made this summer is completed.

"The McArthur well is a producer. Just how much per day it is hard to say. I heard on good authority in Peace River that it is a 22-barrel well. Others said more. But as the ice is just breaking up on the Peace, I was not able to get down to the well to get a first-hand report. I didn't get a chance to see Mr. Slack, the head driller, either.

"There is going to be something big doing in oil in northern Alberta soon. The oil is there, somewhere, and the capitalists are interested. They will find it."

Activity is thriving in the building trade in Galt. During April permits totalling $10,000 were issued, which included five permits for dwellings.

CONDITIONS IN THE WEST

Business Satisfactory in Moose Jaw and Medicine Hat—Prosperity in Calgary—Seeding and the Crops

(Staff Correspondence.)

Moose Jaw, Sask., May 6th, 1918.

Conditions in and around Moose Jaw are quite satisfactory. Wheat seeding in most districts is completed, while in some parts where the weather has been more backward, things are not so far advanced. Everywhere tractors and four and six horse-teams are hard at it. That the west is doing everything possible in the interests of greater production is quite evident, and while there can be a great deal happen between this date and when the crop is assured, there is a splendid feeling of optimism, that if weather conditions continue as favorable all through the growing and maturing periods as they have been so far this spring the west will have an abnormal crop, and this is to be earnestly hoped for. Business in Moose Jaw itself is good, the writer stood in the leading department store on a Saturday evening and watched a steady stream of shoppers, and all seemed to have plenty of money and were undoubtedly spending it freely, giving one the impression that here in Canada we were not feeling the pinch of war to any noticeable degree.

The city is spending $35,000 on water supply, but outside of this there is little or no work being attempted.

Conditions in Medicine Hat.

In Medicine Hat also business is very satisfactory. The factories in this city of natural gas are busy, the milling companies working night and day.

The Monetary Times in discussing the situation with Mayor Brown was told that, the city of Medicine Hat was making strenuous efforts to reduce its overhead cost, they had abolished the system of single tax, and were changing back to the old system of taxation. This year the assessment will be reduced by $2,750,000 on lands, taxing back $1,750,000 on improvements; last year the total assessment of the city of Medicine Hat was thirteen and a half million, this year it would be twelve and a half million. The rate of taxation will be cut this year at least two mills, from 20 to 18. The city has collected in back taxes since the first of the year to the date of writing $86,304.52, this is very gratifying, as at the same date last year they had only collected $25,000. The city is looking to make a profit of $100,000 on its gas business this year, of this they are laying aside $40,000 for a gas extinction reserve fund, and the city will probably continue to set aside a like amount in this fund from year to year.

This year, said Mayor Brown, they were trimming all controllable city hall expenses, the reduction for the year would be approximately $28,000, but in the neighborhood of $10,000 of this would be paid back in increased wages due to the extremely high cost of living. The city bank overdraft had been cut in two since the first of the year, and Mayor Brown said, that by the first of 1919 they hoped to have it entirely wiped out. The city of Medicine Hat is showing great enterprise as evidenced by the fact that they are utilizing the spare time of the city firemen. A machine shop has been erected next to the large central fire hall, and in this the firemen do all the repair work on city cars and other equipment, surely a very commendable idea, especially in the smaller cities.

Calgary is Prosperous.

"Business is brisk in Calgary this spring." This is the answer received on every hand. Travellers report good orders, in fact, merchants very often just have to take what they can get, many lines that they have handled for years cannot now be got. Wholesale houses, the banks, and many other branches of business are experiencing difficulty just now in keeping their staffs up to the mark. Women are more and more taking the places of men, and they will have to be looked to and trained to occupy responsible positions, as men are steadily being called to the colors from every branch of business. The implement dealers report a heavy business this spring, and have received more cash with orders than in any past year, their collections in the last six months have been excellent. Light tractors have been in great demand this season. One thing pointed out to *The Monetary Times* was the fact that the farmers were buying far too expensive automobiles. One dealer of the smaller make of car in a town in southern Alberta has practically been put out of business because the farmers were buying the expensive, heavy cars, which are undoubtedly far less use to him than the light, serviceable cars. They seem to be going to extremes in this connection.

In discussing the crop outlook in Alberta with Mr. Wm. Toole, of Toole, Peet & Company, of Calgary, he said that they had never experienced a better sowing season in Alberta than the present one, the land, generally speaking, he said, is in good condition, and the season was fully ten days ahead of last year. Wheat is coming up in the southern part of the province, and a great deal of the oat crop is also sown. Farmers are busy getting in their barley and flax. If favorable weather continues there will be a much larger area than even anticipated sown to wheat, oats and barley.

Mr. Toole also pointed out that the grass was ahead of the average year, which means that the stock on the ranges are getting early nourishment, very beneficial to cows with calves. Ranchers all say that cattle on the ranges are getting into good condition, the calf crop being particularly satisfactory this year.

UNITED STATES' IMMIGRATION

Immigration from Europe fell off one million during the United States' first year of the war, according to statistics made public on the 1st inst by the Bureau of Immigration. The figures show that only 400,000 immigrants were admitted during the past year, while 1,400,000 came in the previous year.

COBALT ORE SHIPMENTS

The shipments of ore, in pounds, from Cobalt Station for the week ending May 3rd were as follows:—

O'Brien Mine, 65,410; McKinley-Darragh, 107,564; Dominion Reduction, 85,000; Coniagas Mines, 143,095; Nipissing Mining Company, 462,855; Penn Canadian Mine, 96,311.

The total shipments since January 1st now amount to 7,657,728.8 pounds, or 3,828.8 tons.

HARRIS ABATTOIR COMPANY

Messrs. James Harris and J. S. McLean, managing director and secretary, respectively, of the Harris Abattoir Company, have acquired 40 per cent. of the company's stock, formerly held by the William Davies Company. The Harris Abattoir Company has also acquired an interest in Gordon, Ironsides and Fares, of Winnipeg and Moose Jaw.

ST. LAWRENCE COAL AND FREIGHTING COMPANY

An organization meeting of the St. Lawrence Coal and Freighting Company was held on Friday, the 3rd instant, in Brockville, and directors for the ensuing year were elected. The following officers have also been appointed: President, E. F. McCourt, Montreal; vice-president, E. J. Burns, Ogdensburg; treasurer and managing director, J. A. Bresnahan, Brockville. The company expects to be in a position to meet coal and freighting requirements at lake and river ports from Belleville to Cornwall, and to relieve to some extent the congestion which has handicapped these ports.

OTTAWA GAS COMPANY

On the 2nd of May the Private Bills Committee of the House of Commons at Ottawa decided to allow the Ottawa Gas Company to increase its capital stock to $3,500,000. This company is a subsidiary of the Ottawa Light, Heat and Power Company, and the authorized capital was formerly $3,000,000, in addition to which there had been issued $150,000 of bonds. Mr. R. A. Pringle, counsel for the company, said that the stock stood in the market at 69, but that the present stockholders were willing to buy at par in order to provide the money required. Another amendment adopted was accordingly that the new stock must be sold at par.

DEBENTURES

Marked tenders will be received by the undersigned up to noon, Friday, May 24th, for seven thousand dollars ($7,000.00) debentures, payable in twenty-five equal annual instalments, bearing 6% interest, to buy a site and build and equip a two-room school in S.S. No. 8, Fitzroy Township.

WM. BOYLE,
Township Clerk,
Kinburn, Ont.

Municipal accountants will find on page 16 an announcement that will be of considerable interest to them.

The Sterling Trusts Corporation will move to their new offices in the Dinnick Building, 10 King Street E., Toronto, on May 25th.

A congress is to be held in Columbus, Ohio, during the week of May 27th by the Industrial Fire Prevention Committee of the Ohio Industrial Commission.

COST OF BREAD IN CANADA

A statement recently issued by the Cost of Living Branch of the Department of Labor shows the cost of bread in Canada to be 6.851 cents per pound for the month of February. This is just about the same as the cost for January, the price of flour having remained practically the same.

VICTORIA'S INDUSTRIAL PROGRESS

Bright prospects for Victoria's industrial development are held out in the annual report of the board of trade, issued recently.

Industrial enterprises in Victoria during the past twelve months have been active. The lumber mills, iron works and manufacturers generally, were fully occupied. These conditions, together with wooden shipbuilding, which furnished employment for about 1,700 men additional, stimulated all lines of retail trade, and to a great extent the forecast made by this board of trade in the last annual report, that improved business might be expected, has been fulfilled. This encouragement should be an incentive to further endeavors in the development of Victoria's commercial and industrial life.

Following are the principal trade returns for the twelve months ended March 31st, 1918, compared with the preceding similar period:—

	1918.	1917.
Imports	$ 6,714,324.00	$ 6,828,375.00
Exports	4,690,703.00	600,523.00
Customs collections.	1,170,786.40	1,075,869.85
Inland revenues	158,529.23	215,542.70
Bank clearings	88,390,038.00	80,708,090.00

The Windsor, Ont., clearing house was opened three weeks ago, and the following are the bank clearings to date: Week ended April 18th, $1,276,768.13; week ended April 25th, $1,223,410.89; week ended May 2nd, $1,293,582.

SASKATCHEWAN AGRICULTURE TO BE PROMOTED

To hear plans and enter into a general discussion of a comprehensive survey of conditions surrounding production of farm products of all kinds in Saskatchewan, as well as the eradication of noxious weeds in the province, were the chief objects of a conference held at the parliament buildings in Regina on the 1st inst. between a number of field representatives of the provincial department of agriculture and Hon. W. R. Motherwell, minister of agriculture, and F. Hedley Auld, deputy minister.

The department has in mind a survey of the factors entering into farm work in the province, the question of equipment, labor, live stock, food supply, sufficiency of water for domestic and live stock purposes, and a special survey regarding new breaking, the sufficiency of land and tractors and horse-power, the best methods of clearing land in the rocky districts, noxious weeds and animals, and an inquiry as to men who are specialists in growing pure varieties of seed.

Certain townships have been selected because of representative character where an actual census will be taken in order to furnish detail regarding farms, as well as enable the department to make a careful and thorough study of production work in those areas. Many other matters will come under the attention of the field representatives, such as harvest labor, sufficiency of binder twine and general farm machinery.

The representatives were also informed that it is desired that they look into the question of supplies of marketable grains in the hands of the farmers of the province. Farmers at this time of year, it was pointed out at the conference, after making provision for their seeding requirements, should sell all of their wheat supply in order to send forward the greatest possible volume of bread grains to Europe pending the harvesting of the new crop. With the object of ascertaining what marketing supplies are in the hands of the farmers this inquiry will be made.

Addresses were given the representatives by Hon. W. R. Motherwell and Mr. Auld, and at the conclusion of the conference the representatives left for their particular districts.

The Steel Company of Canada, Limited

Annual Report for Year Ended December 31, 1917

To the Shareholders:—

Your Directors respectfully submit the statement of Assets and Liabilities, together with Profit and Loss Account, as at the 31st December, 1917.

The net profits for the year, after deducting charges for repairs maintenance and improvements and providing for War Tax, amounted to $6,040,318.83. The statement below shows the manner in which these profits were dealt with:

Interest on Bonds		$ 515,203.40
Dividends on Shares—		
Preferred	$454,741.00	
Ordinary	690,000.00	
		1,144,741.00
Reserve for Bond Sinking Fund		177,531.07
Reserve for Depreciation		806,000.00
Reserve for Fire Insurance		40,000.00
Special Depreciation for Furnace "A"		400,000.00
Transferred to Betterment and Replacement Reserve		1,406,486.53
Credit to Profit and Loss Account		1,550,356.83
		$6,040,318.83

In the matter of Inventories we have followed the same policy as in former years and have placed the values of our raw materials and manufactured products on a fair and proper basis.

COKE OVENS—At the last Annual Meeting of the Shareholders, the Directors stated that it was the intention of the Company to install a By-Product Coke Oven Plant, at Hamilton, so as to insure an ample supply of Coke and of uniform quality for our Blast Furnaces. All the contracts for this Plant have been let and satisfactory progress is being made with its construction, and we hope to be producing Coke about November, 1918.

ORE PROPERTIES—During the year, together with other Steel Companies of the highest standing, we secured two valuable Ore Properties, one on the Mesaba Range and the other on the Gogebic Range. The proportion of the Ore, which we are entitled to receive from these two properties, will be sufficient to meet over half of our total Ore requirements each year for a considerable number of years. The Ore taken out each year is paid for on a royalty basis, so that beyond paying for our share of stripping and equipping the mines, no large expenditure of capital was necessary. During the season of 1918, we will receive our quota of Ore from the mine on the Gogebic Range, and shipments from the Mesaba Range Mine are expected to commence late in the season of 1919.

SHEET MILL—Since the date of our last report, we have installed a Mill for the making of Steel Sheets, for which there is a large demand in Canada. This Mill is now in operation.

All of our plants were fully occupied throughout the year, but the output was interfered with from time to time by transportation difficulties and the severity of the weather conditions during the past winter.

In conclusion, we should like to particularly draw your attention to the fact that The Steel Company of Canada is a valuable asset to the Dominion of Canada. We have done our share in providing large quantities of Steel for Munition, Agricultural, Railway and Shipbuilding purposes and in meeting the demands for other commercial and domestic needs, we have also contributed in the last three years, in the shape of War Taxes, a very large sum of money, the War Taxes for 1917 exceeding the total amount of dividends distributed to the Preferred and Ordinary Shareholders during that year.

Continued on next page

The Steel Company of Canada, Limited—*Continued from opposite page*

In addition, we have paid in the last three years over Three Million of Dollars of duties on the various articles and raw materials which we have to import.

We have been large purchasers of Dominion War Bonds and have contributed during the past year $55,000 for Patriotic purposes, which we believe you will heartily approve of.

The splendid manner in which our employees have supported the various Patriotic Funds and War Bond purchases is a matter for your congratulation.

Signed, on behalf of the Directors,
ROBERT HOBSON, President.
Hamilton, Canada, March 14, 1918.

THE STEEL COMPANY OF CANADA, LIMITED

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

McIntyre Mining Company.—At a meeting of the McIntyre Mining Company on Friday, the 3rd inst., the directors declared a dividend of 5 per cent., payable on June 15. There had been some doubt as to whether the dividend would be maintained, and moderate selling in the market.

Duluth-Superior Corporation.—The company's earnings for the month of April were $137,266, as compared with $130,662 in 1917. The increase amounted to $6,603, or 5 per cent. Earnings for the year to-date were $553,739, as compared with $507,588 a year ago. The increase was $46,151, or 9 per cent.

Trinidad Electric Company.—The earnings of the Trinidad Electric Company for March, 1918, were as follows:—

	Gross.	Net.
Railroad	$11,046.79	$3,667.62
Light and power	9,525.65	3,898.74
Refrigerator	......	605.35
	$20,572.44	$8,171.71

Toronto Street Railway Company.—Business continues to improve with the company, as will be seen from the gross receipts last month, which show an increase of $32,714.87, compared with April's receipts last year, while the city's percentage is increased by $6,543.97. The receipts last month were $543.054.77, and the city's percentage $108,610.95. In April, 1917, the receipts were $510,339.90, and the city's percentage $102,066.98.

Lake Superior Corporation.—The corporation for nine months ended March 31, 1918, produced 211,452 tons of finished material, as compared with 170,076 tons for the same period in 1917. The unfilled orders on hand March 31, 1918, approximated 203,795 tons. Steel ingot output in March was 48,000 tons. This exceeds the output of three preceding months. The company intends to bring production to around 50,000 tons a month, and to attain this is working on the construction of 30 coke ovens.

A. Macdonald Company, Limited.—The fifth annual meeting of the shareholders of the company, of which Mr. W. P. Riley is the president and general manager, was held in Winnipeg on May 7th. Only routine business was transacted, the annual statement, which has already been made public, being submitted, and the directors re-elected. These include, in addition to Mr. Riley, Messrs. W. H. McWilliams, H. W. Hutchison, A. Kelley and E. E. Hall. Net earnings of the company for the year were $283,076. In 1916 the earnings were $219,015, and in 1915 they were $154,540. No announcement was made with reference to dividends, but the belief is entertained that a distribution of some character may be expected by the preferred shareholders this year.

Brazilian Traction, Light and Power Company, Limited.—The following is a statement of the combined earnings and expenses of the tramways, gas, electric lighting, power and telephone services, operated by subsidiary companies, controlled by this company, for the month of March, 1918:—

	1918. Milreis.	1917. Milreis.	Inc. or dec.	
Total gross earnings..	8,094,000	7,549,000	+	545,000
Operating expenses ..	4,169,000	3,398,000	+	771,000
Net earnings	3,925,000	4,151,000	—	226,000
Aggregate gross earnings from January 1	23,246,000	21,687,000	+	1,559,000
Aggregate net earnings from January 1	11,186,000	12,038,000	—	852,000

Abitibi Power and Paper Company.—The output of the company for the first quarter of the year fell below that of the final quarter of 1917 by over 4,000 tons. The total output for paper groundwood and sulphite pulp was 21,101 tons for the 1918 quarter, as compared with 25,308 for the 1917 quarter. There was an increase in the paper production and also in sulphite pulp, but a large decline in the manufacture of groundwood pulp. The comparative figures are as follows:—

	First quarter, 1918.	Last quarter, 1917.
Paper	16,814	15,736
Ground pulp	1,019	7,057
Sulphite pulp	3,268	2,515
Total, tons	21,101	25,308
Decrease	4,207	....

Toronto Paper Manufacturing Company, Limited.—The annual general meeting of the company will be held on May 17th, 1918. The directors' report to shareholders shows that the company's financial condition is good. The following is the statement of profit and loss:—

Balance at credit, 31st March, 1917		$191,590
Earnings for year	$198,039	
Less bond interest, dividends, bonuses and depreciation reserve	135,540	
		62,499
Balance forward		$254,089

The earnings for the year were $198,039 to which is added the balance brought forward of $191,590, making a total of $389,629. From this, $28,540 bond interest and $75,000 for dividends and bonuses are deducted. After carrying $32,000 to depreciation reserve, there is a balance left of $254,089 to be carried forward.

The above results are obtained after placing in the accounts payable a sum which has been estimated sufficient to pay last year's war taxes. During the past year a new storage warehouse was built for the raw materials, and the company has at the present time under construction an extension to the finishing department, which will be completed this summer. These additions were made necessary by the company's expanding business. In addition to dividends at the rate of 6 per cent. per annum, the company was able to pay bonuses to the extent of 4 per cent., which will partially recompense for the periods when no dividends were paid.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railroads for the month of April:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
April 7	$2,830,000	$2,984,000	+ $154,000
April 14	2,833,000	2,935,000	+ 102,000
April 21	2,708,000	3,016,000	+ 308,000
April 30	3,665,000	4,072,000	+ 407,000

Grand Trunk Railway.

	1917.	1918.	Inc. or dec.
April 7	$1,215,768	$1,359,291	+ $143,523
April 14	1,103,119	1,414,538	+ 311,419
April 21	1,085,031	1,358,972	+ 273,941
April 30	1,481,293	1,986,134	+ 504,841

Canadian Northern Railway.

	1917.	1918.	Inc. or dec.
April 7	$ 736,200	$ 913,600	+ $177,400
April 14	881,600	932,600	+ 51,000
April 21	765,600	929,500	+ 163,900
April 30	932,100	1,182,400	+ 250,300

The following is a statement of earnings and expenses for the month of March, 1918:—

	1918.	1917.	Inc. or dec.
Total gross earnings.	$ 3,436,300	$ 3,273,200	+ $ 163,100
Operating expenses .	3,225,900	2,655,100	+ 570,800
Net earnings	210,400	618,100	— 407,700
Aggregate gross earnings from July 1st	$30,699,400	$30,095,900	+ $ 603,500
Aggregate net earnings from July 1st	$ 2,490,100	$ 7,504,500	— $5,014,400

October 9th is to be observed in the United States as a fire and accident prevention day, and plans are already being made to insure its proper observance.

One Way to Make Money

is to invest your savings in good Bonds, and so make the money you worked for, work for you.

The safest of all Bonds are the Dominion of Canada Bonds.

If you would like to see a Canada Victory Bond before you buy it, we will send you one to your local bank, and you may pay us for it after you have inspected it.

Decide now to buy, and you will never regret it.

Remember, Victory Bonds at present price yield around 5¾% interest, and that is surely better than keeping money idle or letting it earn only 3% on funds for which you have no immediate use.

And, remember, they are always negotiable, readily saleable and Free of Federal Income Tax.

You can buy Victory Bonds at the following prices:

$ 50 Bond costs .....$ 49.45 $ 100 Bond costs......$ 98.87
500 Bond costs...... 494.37 1,000 Bond costs...... 988.75
and accrued interest.

Larger amounts in proportion. Interest payable every six months at all Banks.

Fill out and mail the coupon below. Address Dept. U

GUELPH BUILDING ACTIVITY

Building permits for the city of Guelph for the first four months of the year total $40,930, as compared with $42,210 for the whole year 1917.

A convention of the International Association of Fire Engineers is to meet in Chicago on June 4th, 5th and 6th.

EASTERN TRUST COMPANY CHANGES

Mr. Mark Workman, president of the Dominion Steel Corporation, Limited, and Mr. James Carruthers, president of the Canada Steamship Lines, Limited, have become directors of the Eastern Trust Company. This company is also opening a real estate department under the management of Mr. W. H. Knowles, who was previously with the Crown Trust Company.

LIFE INSURANCE FOR THE YEAR

On another page is printed a statement of life insurance in Canada for the year 1917, as compiled by the Department of Insurance, Ottawa. The total results show a considerable increase in the amount of business at the close of 1917. Canadian companies had business in force amounting to $996,699,292, as compared with $895,528,435 at the end of the previous year. The United States and British companies also increased their business substantially.

The total of policies new and taken up during the year is $281,958,430, or $50,000,000 more than the year 1916; $34,000,000 of this increase is to the credit of Canadian companies. United States companies also show considerable increase in business as compared with 1916, but the new business of British companies on the other hand was $250,000 less than for the year 1916.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

"SOLID AS THE CONTINENT"
HEAD OFFICE - TORONTO, CANADA

The Secret of a Wonderful Success

The rise and progress of The Mutual Life of Canada has been one of the romances in the history of Canadian Finance. Less than half-a-century ago a small group of men in an obscure Ontario town determined to establish a Life Insurance Company that would give the public the maximum of service at a minimum of cost. That being the aim it was resolved that the organization should be purely mutual. Five hundred prospective policyholders were gathered and formed the nucleus of the Company. From this small beginning in 1870 the Company has gone forward steadily with more regard to security and mutual serviceableness than big business. The result is that the Company to-day is enjoying a popularity that is phenomenal, writing during the past year more than $20,000,000 paid for assurances.

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Coldbrook, N.B.—April 28—Residence of Adam Shand was destroyed. Estimated loss, $10,000.

Edmonton, Alta.—April 30—Barn of Maurice Fmeltzer was destroyed. Estimated loss, $3,000.

Fredericton, N.B.—April 30—The Seeley homestead, situated a few miles below this city, and an old landmark of that part of the country, was destroyed.

Hamilton, Ont.—May 2—Premises of the Dominion House-furnishing Company were damaged. Estimated loss, $500.

Maisonneuve, Que.—May 4—Premises of the Savoy Bakery on Ontario St. and Third Ave. were damaged. Estimated loss, $8,000.

Medicine Hat, Alta.—May 2—The Rolling Mills were damaged. Estimated loss, $45,000.

Montreal E., Que.—May 4—Plant of the Munitions and Metals Products Company, Limited, was damaged. Cause reported as spontaneous combustion. Estimated loss, $20,000.

Petrolia, Ont.—May 6—Underground oil tank containing 2,000 barrels of gasoline, belonging to the Canadian Oil Company was destroyed.

Port Stanley, Ont.—May 5—A section of the village was destroyed. Estimated loss, $30,000. The A. C. Brown Company, the United Fish Company, J. R. Moore (of Port Stanley) and S. J. Crowden (of London) were the principal losers, all the barns and ice-houses of the above-mentioned companies being totally destroyed, and the summer home of Mr. Crowden.

Port Sydney, Ont.—May 3—Residence of Sydney Porter and Mrs. Montgomery was destroyed The cause was reported as incendiarism.

Sault Ste. Marie, Ont.—May 2—Old power plant of the Great Lakes Power Company was destroyed. Caused by defective wiring. Estimated loss, $150,000. A large quantity of electric supplies belonging to the Spanish River Pulp and Paper Company was destroyed.

Spruce Creek, B.C.—May 3—Portion of Elk Lumber Camp was destroyed. Estimated loss, $3,000.

St. Catharines, Ont.—May 8—The Ridley College skating rink was destroyed. Estimated loss, $25,000.

Three Rivers, Que.—May 3—The Victoria Theatre and adjoining stores and houses were destroyed. Estimated loss, $150,000. The buildings destroyed and their values were: Victoria Theatre, $40,000; store of Eugene Julien Company, farm implements and general merchandise dealers, $30,000; store of Joseph Bellefeuille, grocer, $15,000; the Caringan building, containing six frame dwelling apartments, $20,000; residence of Louis Lemoine, and 15 frame houses on St. Oliver, Plaisante and St. Denis Streets.

Thurlow, Ont.—May 5—Barn of Mrs. J. Smith was destroyed.

Toronto, Ont.—May 1—Vacant house at 915 Dovercourt Road was damaged. Cause reported as spontaneous combustion. Estimated loss, $50.

May 2—Two houses, one at 34 Grange Avenue, occupied by Max Brownstein, and one at 32 Grange Ave., occupied by Isaac Poslaum were damaged. Estimated loss, $675.

West Toronto, Ont.—May 6—Warehouse and several tons of flour, oats and hay of the Peerless Milling Company, 652 Dufferin Street, were damaged. Estimated loss, $10,000. Insurance carried, $12,000.

Winnipeg, Man.—April 29—Premises of J. Weissler, tailor, 276 Carlton Street, were damaged. Estimated loss, $2,000.

An executive committee of the fire prevention section of the War Industries Board has been appointed to investigate conditions existing in respect to fire hazard in plants manufacturing munitions where adequate protection against fire loss is not provided. It is proposed to advise the government department contracting for supplies from these sources in order that measures of this kind may be obtained by them through clauses in the contracts. The assistance of local bodies is also to be obtained so far as possible.

NEW INCORPORATIONS

An Assurance Company, a Mining Company and a Manufacturing Company, Each With $500,000 Capital

The three largest companies incorporated during the past week were: The Home Assurance Company of Canada, Limited, $500,000, Edmonton, Alta., the Smith, Travers Company, Limited, $500,000, Sudbury, Ont., and the Bellevue Mining Company, $500,000, Winnipeg, Man.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Edmonton, Alta.—Home Assurance Company of Canada, Limited, $500,000.

Guelph, Ont.—T. D. Grant Company, Limited, $40,000; T. G. D. Grant, W. E. Buckingham.

Joliette, Que.—Joliette Tobacco Company, Limited, $50,000; J. Lippe, J. A. Guibalt, J. Dufresne.

Preston, Ont.—The Hurlbut Company, Limited, $150,000; C. E. Hurlbut, G. P. Hurlbut, C. A. Hurlbut.

Walkerville, Ont.—Beaver Stamping Company, Limited, $40,000; R. T. Herdegen, P. Wells, B. F. Kiesel.

Gananoque, Ont.—I. W. Bennett and Son, Limited, $50,000; A. E. Bennett, G. K. Taylor, J. J. Davis.

Brandon, Man.—The Wheat City Tannery, Limited, $40,000; A. J. Crouch, U. Crouch, A. N. Shankland.

Stonewall, Man.—The Rockwood Rural Credit Society, $20,000; J. H. Slater, J. Pulfer, C. H. Stonehouse.

North Bay, Ont.—Gamble Robinson North Bay, Limited, $40,000; C. J. Sanders, C. McCaw, W. W. McCauley.

Sudbury, Ont.—Smith and Travers Company, Limited, $500,000; T. E. Smith, T. Travers, C. H. Hitchcock.

Goulais River, Ont.—Goulais Bay Telephone Company, Limited, $6,000; C. A. Somes, C. Scott, H. McSorley.

Tilbury, Ont.—Canadian Forging and Socket Company, Limited, $50,000; E. G. Odette, J. Foster, L. M. Whaley.

Saint-Pie, Que.—P.-C. Couture, Limitée, $49,900; M. M. Pierre-Charles Couture, Joseph-Isidore Piche, O. Lajoie.

Ottawa, Ont.—Donnen Feldspar Company, Limited, $100,000; S. G. Metcalfe, J. R. Osborne, S. R. Broadfoot.

Sault Ste. Marie, Ont.—Shand Engineering and Contracting Company, Limited, $40,000; J. Shand, S. P. West, G. W. Goodwin.

Stafford, Ont.—Town Line Telephone Association of Stafford and Pembroke, Limited, $880; R. S. Lowe, W. E. Bulmer, J. Johnston.

Hamilton, Ont.—Patricks, Fair and Square, Limited, $60,000; A. Patrick, C. E. Patrick, A. P. Gibbon. Canadian Toys, Limited, $100,000; C. V. Langs, E. G. Binkley.

Toronto, Ont.—House Repair Company, Limited, $40,000; W. J. Saulter, W. H. Jones, C. Saulter. Process Engravers Realty Company, Limited, $75,000; Z. Gallagher, J. Richards, M. Stover. West Toronto Iron and Metal Company, Limited, $10,000; H. Naftolin, M. Naftolin, A. Naftolin. Dodd Heating Systems, Limited, $100,000; J. O'Neill, H. S. Dodd, J. J. O'Neill. L. E. Miller, Limited, $40,000; L. Davis, S. M. Mehr, E. Frise.

Montreal, Que.—Canadian Graton and Knight, Limited, $100,000; R. H. Jackson, E. Jackson. Canada-Oriental Trading Company, Limited. $50,000; H. Blouin, V. Geoffrion, J. A. Prud'homme. La Compagnie Medic-Doentaire, Limitée, $25,000; MM: A. Chase-Casgrain. Errol-Malcolm McDougall, Sadi-Conrad Demers. Broadway Amusement Company, Limited, $20,000; S. Laing, M. Weber, F. Dierner. Canadian Adjustment Bureau, Inc., $20,000; J. Kellert, J-Alphonse Moisan. P. Laplante. Visitation Island Land Holding Company, Inc., $70,000; M. M. Thomas-Joseph Coonan, P. S. Conroy, Edmund-H. Reilly.

Winnipeg, Man.—The Bellevue Mining Company, Limited, $500,000; H. W. Hollis, J. H. Brett, S. Lawler. United States-Canada Land Company, Limited. $50,000; F. M. Burbidge, D. L. Bastedo. R. C. McPherson. Individual Garments, Limited, $10,000; H. Wheeldon, S. W. McMurray, E. McDonald Levins. Motor Farming and Development Company, Limited, $20,000; A. E. Bowles, G. G. Adams, J. H. Bowles. Brooks Bindery, Limited, $20,000; J. A. Baddeley, R. Baddeley, A. J. Abramovich. Grain Claims Bureau, Limited, $20,000; R. R. Dobell. C. H. Leaman, E. G. Isaac. Merchants and Farmers Exchange, Limited, $5,000; M. Goldstein, L. Goldstein, J. S. Finkleman.

The Cost of Our State Merchant Fleet

Comparison of Ship-Building Costs in Britain, United States, and Canada—Present Costs Very High, and Excess May Be Written Off—After the War Prospects of Shipping — Keen Competition May Be Anticipated.

By GEORGE W. AUSTEN

At present there are in Canada fourteen shipyards in which steel freight vessels are being built. Most of them are still working on ships for the British government, ordered through the Imperial Munitions Board. But in Montreal, the Canadian Vickers Company has in hand two steel freight vessels for the Canadian government. One is 8,100 tons and the other 4,350 tons. In Vancouver a steel freighter for the government is being constructed. It is about 5,000 tons. At Collingwood, another of 3,550 tons is on the ways. These are the first vessels in the government's new State fleet programme, and the Montreal pair will, it is expected, be completed by autumn.

As the contracts of the Imperial Munitions Board are filled, new contracts will be placed by the Dominion government for vessels. It is expected that a tonnage of about 250,000 can be built in the fourteen yards, but it will be the end of this year before the majority of the yards will be free for building for the Dominion. The intention of the minister of marine and fisheries, with the approval of his colleagues, is to continue the building programme over a period of several years, devoting $30,000,000, $40,000,000 or $50,000,000 annually to the project. At the end of the period, Canada will have a large fleet of ocean freight vessels, a steel shipbuilding industry firmly established, and a seafaring population of much national worth. Unquestionably the programme will have a large effect upon our economic future, especially as after the war the trade competition on the seas will be the most acute ever experienced.

It is rather curious, however, that no one seems to have questioned the costs of the programme, and their effect upon the future of the Canadian ship industry. Since the government provides the money, and everyone welcomes the building of steel ships, the secondary economic features of the programme do not appeal to the public. Yet, in the final analysis, the costs will have an important part in determining our maritime future. When normal conditions are re-established in ocean traffic, and cheap building and ship-manning exert their customary influence, we shall experience some of the ill-effects of the high costs incidental to the present ship emergency. We shall not be alone, of course, but it seems to be true that the steel ships we are building cost more than similar ships built in the United States and Britain. If the government undertakes the operation of the ships, the comparatively high initial cost will not handicap operating rates the same as would be the case in private ownership. Either the ships can be operated with no profit, or the excess cost written off.

Ocean transportation is a peculiar business, and a very difficult one. In it the shipowners of a free trade nation have an immense advantage, because of the lower costs of building and operation, and the extensiveness of the carrying that is done through large imports. But after the war, no nation is likely to have real free trade. The fiscal requirements of Britain, for instance, will force it to maintain heavy duties on many commodities, and the exclusion of German trade also may compel the British government to reconstruct the fiscal system. But experience before the war, during long decades of vicissitudes in the ocean-carrying business, has proven that, given a fair field, the British shipping companies will be undisputed masters of world traffic. They will have the big advantage of being able to build ships much more cheaply than overseas nations. The United States is calculating that its quantity production of steel ships will enable it to build them after the war as cheaply as Britain. But that is yet undemonstrated.

The president of the American Shipbuilding Company recently gave interesting figures, to show that construction costs in the United States are still excessive. The average daily wage for a nine-hour day in British, ten-hour day in Japanese, and eight-hour day in American yards is:—

	Britain.	Japan.	United States.
Skilled	$2.16 to $2.79	75 to 90c.	$5.80
Semi-skilled .	1.94	70	4.40
Unskilled ...	1.81	60	3.20

Since the cost of labor is about 50 per cent. in a steel ship, the difference in favor of Britain and Japan is startling. At present, steel ship plates are worth about $200 a ton in Japan, owing to shortage, compared with about $65 in the United States, thus equalizing the lower cost of labor. But if conditions return to normal with reasonable quickness after the war, it is certain that British and other European building costs will be far below American, in spite of the advantage the latter may have in the output of plates. Before the war, wages in British yards were about $15 for skilled labor and as low as $5 a week for unskilled. There can be no return to such low levels, but will not the proportionate cheapness of construction still remain heavily in favor of Britain?

Now, such conditions as these have a special meaning for Canada. Our costs of steel shipbuilding are higher than those in the United States. The average of wages for skilled labor in Canadian yards is from $3.75 to $5.50 a day, and from $2.75 to $3.75 for unskilled. This is somewhat lower than the American rate, but the difference is made up by higher costs of fittings and other material. The average price paid by the United States Emergency Fleet Corporation for steel ships is about $160 a ton, and, while figures of Canadian government contracts have not been published, it may be taken that they are probably close to $200 a ton. The gross cost estimated by the minister of marine and fisheries for a tonnage programme bears such a relation. Now, the contract of the government with the Dominion Iron and Steel Corporation for steel plates is based on a price of $4.25 per hundred pounds with ingots at about $24 a ton. The tonnage price for plates is, therefore, about $85, compared with the United States' price of about $65. On 250,000 tons of steel ships, there would be about 80,000 tons of plates and sections, and $20 a ton difference—it would be less, perhaps, because of freight and other charges—would make an excess charge of $1,600,000.

British Tonnage Still Much Cheaper.

Some big transactions have occurred in British tonnage at prices approximating $80 a ton. This price has some relation to the replacement value after the war. The pre-war value of steel tonnage was from $40 to $50, and we may be sure that the skill and ability of British shipping interests will succeed in keeping costs at least down to the $80-a-ton level. If our Canadian government freighters cost nearly $200 a ton, what an excessive capital cost must be loaded on to them, compared with British ships, even those built now! Before the war, the British yards could turn out vessels from 25 to 50 per cent. cheaper than Canadian shipbuilders. This estimate is furnished by a Canadian shipbuilder. According to present relative costs, our ships must bear even a heavier handicap. There is, of course, no alternative but to go on and build the ships, and, if necessary, write off the excess cost. Canada will need the ships. It needs a steel plate industry. It needs a ship-construction industry. The excess cost is as nothing compared with the waste of our railway era.

Germany built up a merchant marine of 5,000,000 tons by an elaborate system of subsidies and bounties. That merchant marine served Germany's trade interests so efficiently that the money devoted to subsidies was returned to the nation many times over. The experience of Canada is likely to be the same. Even if some of the fourteen shipyards now building steel vessels die off when the government contracts are finished, the remaining ones will have been so strengthened as to be able to compete on a fairly good basis for outside business. But it is probable that the expansion of Canadian business and traffic after the war will give them plenty of Canadian orders.

BELL TELEPHONE PURCHASE

The Bell Telephone Company of Canada has purchased for $27,000 the property of the Niagara District Independent Telephone Company. This company has been serving the rural community around Niagara Falls for several years.

HAMILTON CLEARING HOUSE ASSOCIATION

The annual general meeting of the Hamilton clearing house was held in the board room of the association, Merchants' Bank Building, on Tuesday, the 7th instant. The following officers were elected:—Mr. W. J. Dawson, manager, Union Bank of Canada, chairman; Mr. R. R. Wallace, manager, Bank of Montreal, vice-chairman; Mr. A. C. Rowe, manager and secretary-treasurer. The following gentlemen were elected an advisory committee:—Messrs. Dawson, R. R. Wallace, Glassco, and Morrison.

PROVINCE OF ONTARIO BONDS

The province of Ontario is asking for tenders until noon on the 20th inst., for $3,000,000 10-year 6 per cent. gold bonds, dated May 15th, 1918. The official advertisement appears on another page. The money is to be used for capital expenditures on the Hydro-Electric, and for seed grain loans. The necessary permission has been secured from Ottawa to sell the bonds.

MONEY MARKETS

Messrs. Glazebrook & Cronyn, exchange and bond brokers, report the following exchange rates to *The Monetary Times*:—

Total	$262,886,434	$276,010,566	—	$13,124,132

The Toronto bank clearings for the current week are $65,489,446, compared with $65,367,154 for the same week in 1917, and $50,240,714 in 1916.

The April number of the Home Bank Monthly is a special number devoted to advertising. Different questions regarding the general subject of advertising are discussed and some of its special applications to the banking business.

GOVERNMENT AND THE RAILWAYS

Government Ownership in England, United States and Canada—Relative Merits of Public and Private Ownership

(This is the second of a series of three articles by Mr. W. T. Jackman, M.A., the first of which was published last week.)

We have been pointed to the cases of Great Britain and the United States to show that government ownership is wonderfully successful. In neither of these countries do we have government ownership, although for the period of the war we have government control. The fact is that we have no means of knowing what the financial results have been in the former country; while in the latter the short period of government control would be insufficient in order to reach a judicious conclusion. In each case the government assumed the direction as a war measure only, not to retain the roads permanently. In our own country there is little, if any, need for such action, even during the present war time, for our railways are already co-ordinated under a central organization, and the traffic congestion and embargoes known in the United States are practically unknown here. I would not minimize the operating results that have been secured in these countries through unified control; but the conditions of war times are so unlike those of peace that no comparison can be made concerning the working of the railways under the diverse circumstances.

The Telegraph and Telephone in Great Britain.

I admit that a very roseate picture has been portrayed as to the extraordinary benefits to be secured from government ownership; and unless we had some means of correcting out perspective we might be deceived as to the effect. What do we find, for example, in the motherland? Most people will agree that if government ownership is unsuccessful there it would be equally, if not more, unsuccessful here. There are some municipalities which have made their public utilities pay and furnish, at the same time, good service. But upon the wider or national scale of operation what have been the results. Look at the telegraph. The state took over this business in 1870, and parliament was assured by those who prepared the scheme that the complete cost would be repaid out of profits in fifteen years, after which the taxpayers' burdens would be relieved by this ever-increasing revenue. But after the second year of operation by the state the profit entirely disappeared. The finances have yearly grown worse, until in the years just before the war the telegraph was costing the taxpayers yearly, not less than £1,400,000. Again, in 1911, the state completed the purchase of the telephones, the public being made to believe that there was great potential profit ahead by so doing. Before purchase, the state received from the National Telephone Company £350,000 a year; but this income disappeared and from 1911 to 1914 the receipts were barely enough to pay for the expenses of operation. Such results should give us deep concern before attempting state ownership of our railways, for the telegraph and telephone are very simple businesses in contrast to the exceedingly complicated administration of even one great railway.

Our Own Railway Experience.

What has been the experience of our own country with government ownership? The history of the Intercolonial Railway is an outstanding example of an enterprise which has not paid any interest on the capital involved, and, on the whole, has not paid more than operating expenses. We must not, of course, overlook the fact that this road was constructed for strategic considerations and to join the maritime provinces with the central provinces of Canada. But the Canadian Pacific was constructed for similar reasons, and yet this road, in the control of a private company, in addition to fulfilling the original purpose intended, has also paid good returns on the investment. The Drayton-Acworth report is very specific with reference to the evils of the Intercolonial management, and equally emphatic in declaring that it ought to be taken out of the sphere of political influence. The history of government telephones in Manitoba is another instance showing the influence of politics, unsatisfactory service, deficits in operation, and unsound administration.

The Temiskaming and Northern Ontario Railway is, doubtless, the best instance of government ownership that we have in Canada; yet, even with the careful management of Mr. Englehart, this road has paid no interest on the capital involved. It has done good pioneer service in opening up a new territory for development, but other roads privately owned and operated have done this and likewise paid interest on the capital. The last government at Ottawa, in advocating that the Canadian Northern be taken over, was evidently willing to do so without any prospect of success, but in pure empiricism. The plain statement of a member of the government was that, after this railway had been acquired, "we shall be able to see whether or not government ownership can be made to pay and is in the interest of the people of the country. Our ability to make the railway pay is very doubtful, nor is it certain that we can operate it as cheaply and efficiently as it can be operated by private enterprise." This attitude of mere experimentation with all its uncertainties comes out also in the assertion of the minister of finance, that "even if we do not succeed in managing them, [i.e., the railways], quite as efficiently as private enterprise would manage them, still the advantages that will accrue to the public from public operation will more than counterbalance any defects in administration." What these "advantages" would be, he wisely refrained from trying to explain. One cannot but feel that such a statement as this, from one entrusted with a high public office, offers no hope for the public in government ownership of railways.

To transfer *all* the railways to the government, and have no more assurance than this unalloyed doubt would surely be a vast calamity. But I have more confidence in the present government cabinet that saner counsels will be given, and it is hoped that the complete railway policy as it is developed will not be based upon the pressure of financial interests but upon those plans which will best promote the entire national welfare.

It was advocated in the Drayton-Acworth report that all the railways, except the Canadian Pacific, should be handed over by the government to "the Dominion Railway Company" to be operated by that body *free from political influence.* Great emphasis was laid upon this. How impossible this is can be understood by anyone who realizes the facts of parliamentary procedure. Any irresponsible organization, such as the proposed Dominion Railway Company is wholly repugnant to our ideas of responsible government. If the state owns the railways it must manage them in accordance with the public opinion of its citizens, and parliament is the constitutional means by which this opinion finds expression. The proposal to give the railways into the control of an irresponsible and self-perpetuating body like this, which should act without regard to the wishes of the electors and their representatives in parliament, is a pipe dream; but there is no place for it in a democratic system of government such as ours. Even if such a body were established by one government, there is no reason to think that it would be tolerated by the next, for one government cannot bind all succeeding governments to accept its acts as the law of the country.

Private Ownership More Progressive.

If government ownership is beset with many difficulties, among which political influence and corruption bulk large; and if private ownership be also the means of political intrigue—of which we are not at all unmindful—which method of control should we prefer? I am going to suppose for the moment that there is as much political chicanery and as many devious methods employed under private ownership as under government ownership—though the supposition is probably contrary to fact. But, even granting this assumption, which system should we retain? My answer is, retain that system which shows the greater progressiveness and the greater responsiveness to the growing demands of the country's traffic.

Can there be any question as to which of the alternatives meets these requirements? Let me quote the words of Mr. Acworth whose knowledge of the railways of the world is replete. He says: "In all the history of railway development, it has been the private companies that have led the way; the state systems that have brought up the rear. It would be difficult to point to a single important invention or improvement, the introduction of which the world owes to a state railway. . . . Railroading is a progressive science. New ideas lead to new inventions; imply new plant, new methods. . . . The state official mistrusts ideas, pours cold water on new inventions, grudges new expenditure." Is it this unprogressiveness that we want to introduce into our railway managements? Will this be the means of building up a great country and enabling Canada to take the place among the nations which by her natural endowments she is fitted to take? Or, do we want such a freedom of initiative as will enable private enterprise to develop to the utmost all our resources and make them contribute to the communal welfare and the national advantage? If we want to hear the hum of industry, to know the progress of agriculture, and to experience the accumulation of wealth, the safe course would point to the policy of leaving the railways in the hands of private owners under government regulation. But if we want to stifle, or at least impede, the expansion of our basic industries, and retard the economic growth of the country, it seems as if we could not use any more effective means toward that end than to introduce upon a extended scale the system of government railways, the officials of which would have little, if any, interest in operating results, and would be restricted at every turn by bureaucratic dilatoriness and the indolence and incompetence of a body of employees working under civil service rules.

State Ownership Not the Only Alternative.

The last government asserted that the railways of the country, except the Canadian Pacific, had broken down and in this statement they were but reiterating what the railway inquiry commission had said. The Drayton-Acworth report declared that these two commissioners saw no way in which the impecunious railways could be carried on under private management, and, therefore, they made the recommendation to which we have already made reference.

If the railways cannot be carried on by private enterprise, of course, there is no other alternative than government ownership. But, notwithstanding the majority report, it seems impossible to believe that we are so hedged about that there is only one possibility open, namely, to hand over the roads to the government. President Smith was not so pessimistic as this, for the plan which he outlined would keep the business in private hands; and when we remember that he is perhaps the foremost railway man in the United States we are disposed to think that the good judgment and discretion which he displays in the management of enormous interests did not entirely leave him when he made his recommendations concerning the Canadian lines. Is it not better to keep the railways under private management and tide them over the present crisis, in order to maintain them *tout en vie*, with that vigor which characterizes all private enterprise, rather than have them put into government hands and so operated as to be the tool of politicians and an omnipresent barrier to the forward movement of the people? The railway is a business which looks to and plans for long-term results; its whole policy is formed with these in view—in fact, that is the chief reason why our railways are now in difficulty. Can not our legislators take the same view and mold their attitude toward the railways accordingly? Can they not refuse to listen to the clamant outbursts of the demagogue and of an unenlightened press in their opposition to the private companies and be really the leaders in a movement to firmly establish the railways on a basis of prosperity for themselves and of the greatest national service to the people? If once we are fully convinced of the fact that progress is not found on state railways, as we have shown above, we should bend every energy to secure that most essential characteristic by keeping these great public utilities in the control of private individuals, with the purpose of obtaining the greatest results over a protracted period of time.

No Occasion for Permanent Acquisition.

Of one thing I am certain, that the present time, with all the disturbances due to the war, the dislocation of industry, the maladjustments of labor, the necessity for keeping capital in large amounts at the disposal of the government for carrying on the war, is not the time to make arrangements for the railways of the country and give them a setting for the long years of peace that are to follow. The United States did this in regard to her banking system, in making the national banks, established during the Civil War for the purpose of aiding her war financing, a permanent institution. During the succeeding fifty years of tremendous growth the banking facilities were effete, out of harmony with the requirements of the country. So would it be with us if we endeavor now to put our railways into a framework from which we would gladly have them extricated during the years of development in the near and more remote future. England and the United States, with which we are most closely related and whose people partake of the same racial psychology as ours, have not taken over their railways during the war with the purpose of holding them during subsequent years. And it would seem to be a gross blunder for Canada to use the present occasion to graft on to our national life the incubus of a government railway administration.

PERSONAL NOTES

Mr. J. S. Lillie has been appointed assistant land and tax commissioner for the western lines of the Grand Trunk Railway, with headquarters at Detroit.

Mr. Norman L. McGloin has been appointed agent of the Insurance Company of North America at St. John, N.B., in succession of Messrs. C. E. L. Jarvis & Son.

Mr. Leonard T. Collard, who conducted a private banking business in St. Catharines for nearly half a century, died on May 12th, aged 64. He was also American consular agent for St. Catharines up to a few years ago. He leaves one son, Mr. W. E. Collard, manager of the Imperial Bank at Ridgeway.

Mr. John Galt, president of the Union Bank of Canada, has been elected to the board of the Trust & Loan Company of Canada. Directors of the company, as shown in the annual report, include the following:—Hon. Sidney Peel, London, president; Lord Stratheden and Campbell, London; J. H. Newcomb, London; Frederic H. Scott, Sussex; Russell Stephenson, London; Frederic W. Stobart, Bedford, and Col. L. Edye, Montreal.

Mr. Chas. Ruby has been appointed general manager of the Mutual Life Assurance Company of Kitchener, Ont. Mr. Ruby is well qualified to succeed to the office, having proven his ability by thirty-four years of faithful and conscientious service. Mr. Ruby has attained to his present position by four successive steps. He entered the service of the company in 1884, was appointed actuary in 1902, secretary in 1907, and general manager in 1918.

AGRICULTURAL VOTE IN UNITED STATES

An emergency bill, authorizing the department of agriculture to spend $19,730,893 to increase the production of food, was favorably reported on the 4th instant by the agricultural committee of the House of Congress.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members Toronto Stock Exchange, 103 Bay Street Toronto:—

May 15th, 1918.

	Div. Rate	Price about	Yield about

LIMITING INDUSTRIAL PROFITS

The Wall Street Journal, which has given close and friendly attention to Canada's industrial development during the war, had another appreciative editorial last week dealing with our trade outlook when peace returns. It refers particularly to the jump in value of our exports to the United Kingdom from $215,000,000 in the fiscal year ended March, 1914, to $800,000,000 in the fiscal year just ended, and remarks that comparison of the figures will show greater relative gains in percentages than, perhaps, in any other country. Our foreign trade last year was only $21,000,000 less than the foreign trade of the United States in 1904. Commenting thereon, this friendly observer ascribes it to "capacity to utilize every opportunity to the utmost," and it continues as follows: "This ability to make the most of the work of the day, in foul weather as well as fair, is a trade asset which may be stimulated by war, but cannot be stolen or impaired by peace. A people so enterprising and spirited may be relied on to do their utmost to hold the pace they set in securing a share of the war trade."

The business community in Canada, however, begins to think that if our government follows a policy of discriminating against Canadian industries and organizations that have taken a conspicuous part in building up this vast war export trade, and which have set an excellent example for the whole country in regard to efficient and conservative management, our chances of holding the pace after the war will be lessened. Throughout the whole Dominion there is no business or industrial organization that has excelled the Canadian Pacific Railway in efficient, careful, conscientious management, in patriotic endeavor, and in the upbuilding of Canada and of Canadian credit. Nevertheless, it has been subjected to discriminatory taxation. The Railway Commission, after careful and impartial examination, decided that the 15 per cent. rate increase was fully justified by the great increase of railway operating costs. Assuming that this finding was right and proper, it certainly appears to be discrimination to lay the tax of $7,000,000 and more upon Canadian Pacific Railway earnings, when neither the excess profits tax nor the increased 6 per cent. income tax on corporation net profits, as applied to the Canadian Pacific, would produce even half of that sum.

The packing industry is another that has been instrumental in greatly expanding Canada's export trade. Large profits were made, and, although much hostility was created by the high prices charged, it appears that the main source of the increase of profits was in the great volume of business done, much of it being business that would have gone to United States packers but for the energy of the Canadian packing houses. In response to popular demands, the government not only limited the margin of profit on packers' turnover, but also put a strict limit on the rate of profit on their capital. This is the only Canadian industry to which such measures apply. Despatches this week from Ottawa intimate that as a result of a special report on the profits of the Canadian milling companies, prepared under the supervision of Mrs. George Hambleton, the government is now considering the taking of discriminatory measures against the flour milling industry It will be remembered that the milling companies are now limited to a profit of twenty-five cents per barrel on flour; also the maximum selling prices for bran, shorts and other by-products have been fixed. So the interests of consumers are already adequately protected. But, according to the despatch to a leading Toronto daily, "Most of the companies have continued to make big dividends, add large amounts to reserves, and otherwise greatly increase their liquid assets." They have been able to do this because of the immense volume of business done. Their management is capable and honorable, the industry is indigenous to the country, and, if allowed to develop and strengthen itself, its operations will be of great value in enabling Canada to carry the heavy war burden. But, notwithstanding that the milling industry is now subject, like all other industries, to the excess profits and income taxes, and notwithstanding that prices to consumers have been fixed on a fair basis, parties are urging the government to discriminate against it. The proposal is to put a strict limitation on annual profits available for dividends, and to provide that anything over the maximum dividend percentage on capital shall go to government, as is the case with the packing industry. It is difficult to see why one or two Canadian industries should be singled out in this manner for discriminatory and repressive treatment. Whatever may have been complained against the packers' prices, there have been none against the millers'. It will be detrimental to the industrial development of the country if our representative industries are singled out for discriminatory or oppressive treatment wherever, by good management, they develop their business to the point at which it gives a large return on a relatively small amount of capital invested.

THE QUESTION OF TRADE WITH GERMANY

Considerable discussion has been evoked in many of the allied countries regarding an after-the-war policy of trade with Germany. Efforts are being made to prescribe a policy to be pursued for twenty-five, or even fifty, years. Some of the most extreme efforts of this kind are being made in the United States. The American Guardian Society, an organization lately established in New York, has sent out cards for signatures, promising not to buy or use German-made goods for twenty-five years. The Canadian House has discussed the question more than once.

A thorough study of this subject has recently been made by the British Parliamentary Committee on Trade After the War, of which Baron Balfour is chairman. Their interim report says: "In general, prohibition of exports to present enemy countries after the war would be impracticable and inexpedient." This is the most authoritative pronouncement so far made on the subject, and should be a warning to countries, especially British colonies, who are contemplating measures of this kind. Only the other day a lively debate took place in our Canadian Senate, when Senator Lynch-Staunton's bill for the identification of traders in German goods was given its second reading. The bill was warmly opposed by Senator Roche, of Halifax, who declared that when the war was over Germany would become Canada's best trading customer. The speech appears to have produced protest from all sides of the House, and was subsequently repudiated by other senators who took part in the discussion.

Senator Roche said that he opposed the bill on three grounds. He believed that it would result injuriously to the people of Canada; that it would be an unfriendly and hostile act, antagonistic to efforts to promote the continuance of peace at the conclusion of the war; and that finally it would not succeed in diminishing trade with Germany. The United States would control the financial and commercial world, and would not require Canadian goods. The Norwegian could outsell us in lumber in France and England. Where would we sell our flour, our wheat, and our bacon?

While some of Senator Roche's statements may be rather far-fetched, there is nothing to be gained by a declaration of an after-the-war trade policy at the present time. Senator Beique expressed his opinion that the bill was a little premature, and other senators were of the opinion that the loss to Canada would be more than the injury to Germany. The events of international politics during the past few years should have taught us by this time that political alliances are by no means permanent, and that the most remarkable changes may take place in the course of a very few years. So long as Germany remains an enemy of the British Empire, any measures which will properly contribute to its defeat are quite legitimate. Once peace is declared, however, this state of enmity ceases, and commercial relations are resumed. When this time arrives, the question of trade policy can be intelligently discussed and uniform action taken, at least by the parts of the British Empire, if not by all of the allied powers. Any action taken at the present time would be superfluous, and would have to be either revised or repudiated.

The economic isolation of any nation is not a thing to be desired, any more than its political isolation. German trade after the war will not only benefit Germany, but also the countries which trade with her. For the past four years we have been denouncing autocracy and the suppression of peoples, and, however we may aim to revise Germany's political aims, we cannot consistently embark upon a policy of trade restriction. Efforts of this kind do not contribute to winning the war, and might better be expended in the more positive way of promoting Canadian trade abroad.

TORONTO BUREAU OF MUNICIPAL RESEARCH

Many useful suggestions for the improvement of civic government are contained in the fourth annual report of the Toronto Bureau of Municipal Research. This bureau was established four years ago, and is supported by about 250 members and contributors in Toronto and neighboring cities. The object of the institution, as the title would indicate, is to investigate the facts of city government and publish them in such form that they may be understood by all citizens. The field has been limited so far to city government, but a wide variety of subjects are included under this head.

During the past year fourteen bulletins and booklets were issued. The most important study made during the year was that of the Toronto General Hospital, made at the request of the hosiptal's board of trustees. The report of this study contained recommendations dealing with the administration of the hospital, particularly from a business standpoint. Following the issue of the report, Dr. Horace L. Brittain, managing director of the bureau, become superintendent of the hospital for one year in order to carry out the recommendations.

A ward survey has also been carried on for some time, but the report has not yet been published. Considerable work was done during the year, however, on the subject of the community's philanthropic and charitable work, with special reference to that conducted under private auspices, and a number of pamphlets were issued on the subject. Among the improvements suggested was that a federation for community service should be organized.

An important study of Toronto's finances were contained in a booklet called "City Budget Facts," issued in December, 1917. Several suggestions are made in this booklet regarding the city's business. It is maintained that when the city goes into a business with the intention of making it self-supporting, this policy should be carried out, and the taxpayers should not be asked to bear the burden. On the other hand, to derive a profit from it would be to lighten taxes at the expense of those who made use of the service. Reasons for making municipal

trading operations self-supporting are, it is maintained, even stronger now than in 1916, as there is a likelihood of the street railway system being taken over in the near future. The civic car lines are particularly referred to as an example of an unprofitable civic undertaking, and reference is also made to the refusal of the city council to act upon the recommendation of the commissioners, Messrs. Bradshaw and Harris, that one cent increase should be made in the fares. Regarding the recent conflict between the board of education and the city council as two representative and independent bodies, it is suggested that if the commissioner of finance were the chief financial officer of both bodies and were charged with drawing up the annual tentative budgets for them, there would be more mutual understanding. An administrative board, composed of the permanent heads of the city departments, is also suggested.

Some work was also done for outside communities, the most important being the survey of the schools of Akron, Ohio. The expense of this study was defrayed by the Akron chamber of commerce. The revenue of the bureau is limited, about $20,000 in contributions having been received last year. About $4,000 was also derived from special services. A suggestion is made that a national institute of this kind should be established, which should be at the service of all Canadian government bodies or organizations of citizens acting for the public good.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Alvinston, Ont.—May 10—The Alvinston flax mill, owned by McCall and Company, of Petrolea, was destroyed after being struck by lightning. Estimated loss, $10,000.

Ashmont, Alta.—May 7—Barn and granary of Walter Joy were damaged.

Brandon, Man.—May 9—The Strand building was damaged. Estimated loss, $25,000.

Belleville, Ont.—May 12—Asselstine and Sons' auto and bus livery on Grove Street was damaged. Estimated loss, $10,000.

Cobalt, Ont.—May 10—Power house at the Penn Canadian Mine was damaged.

Collingwood, Ont.—May 9—Small frame barn of Mr. A. McAllister on Oak and Eight Streets was destroyed.

Dorchester, Ont.—May 10—The Walter Hunt house on Bridge Street was damaged. The loss is partly covered by insurance in the Dorchester Mutual Insurance Company.

Esquimalt, B.C.—The Military Convalescent Hospital reported damaged in our issue of May 3, is located in Esquimalt, not in Victoria.

False Creek, B.C.—May 15—The J. Coughlan and Sons' shipyards were damaged. Estimated loss, $1,500,000. The buildings destroyed were: The fitting-out wharf, the boiler shop, draughtsmen's quarters and various other departments.

Fort Frances, Ont.—May 12—Store of James Carter and Son was destroyed. Cause believed to be incendiarism.

Goderich, Ont.—May 11—Lighthouse on the north pier was damaged. Cause due to explosion of acetylene light.

Hamilton, Ont.—May 10—Premises of the Hamilton Wool Company at the rear of 159 Rebecca Street were damaged. Caused by spark from rag-picking machine igniting inflammable material nearby. Estimated loss, $500.

Kitchener, Ont.—May 8—Chicken house of Mr. Jos. Weber was damaged. Caused by defective incubator. Estimated loss, $50.

Leamington, Ont.—May 10—Casper's barber shop and two other stores were destroyed. Estimated loss, $2,000. The Wigle Block was damaged. Caused by overheated stove. Estimated loss, $40,000.

Levis, Que.—May 14—The Levis Laundry was destroyed. Estimated loss, $40,000. Insurance carried $20,000.

Montreal, Que.—May 9—Vacant house at 1528 Notre Dame St. E., was damaged.

Morriston, Ont.—May 8—Barn and contents of Mr. A. McEdward were destroyed.

New Glasgow, N.S.—May 11—Home of Mr. and Mrs. A. S. Campbell was destroyed. Estimated loss, $2,500.

Oakburn, Man.—May 11—House, barns and 2,000 bushels of oats of Fred. Soloman were destroyed.

Oakville, Ont.—May 9—Many buildings, including the Oakville House, were damaged.

Oxford Junction, N.S.—May 10—Three million feet of lumber were damaged. A greater part of this belonged to Dunfield and Company, of Halifax, N.S.

Quebec, Que.—May 11—Main plant of the Victoriaville foundry was destroyed. Estimated loss, $15,000.

Saskatoon, Sask.—May 11—Sleeping car in the Canadian Northern Railway yards was damaged. Caused by defective heater. Estimated loss, $2,000.

Steveston, B.C.—May 14—The Steveston Canneries and a large block of stores and hotels have been destroyed. Estimated loss, $400,000.

St. John, N.B.—May 6—House at 74 Kennedy Street was destroyed. Estimated loss, $2,200. Insurance carried, $600.

St. Roch, Que.—May 11—Shoe establishment of Louis Beaubien Company, Rgd., at the corner of Boulevard Langelier and St. Valier Street, was damaged. Estimated loss, $50,000.

Three Rivers, Que.—May 13—House occupied by Madame Dauphinais was damaged.

Toronto, Ont.—May 9—Main building of the Royal Canadian Yacht Club was destroyed. Estimated loss, $60,000. Insurance carried, $103.000.

Welland, Ont.—May 9—Store of Dain Manufacturing Company was damaged.

Winnipeg, Man.—May 8—Stables at the rear of Hitchings' paper box factory were destroyed. Cause supposed to be of incendiary origin. Estimated loss, $2,000.

May 15—Business building on Main Street was destroyed. Estimated loss, $145,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Victoria, B.C.—Fire Chief Davis submits the following report for the month of April to *The Monetary Times*: Loss, buildings, $3,846.85; contents, $671; total, $4,517.85. Insurance, buildings, $27,100; contents, $500; total, $27,600. Total amount of property at risk, $99,400.

St. Catharines, Ont.—The skating rink damaged on May 8th, the value of which was reported as $25,000, was, we have since been informed, worth only about $10,000. The amount of insurance carried was $5,000.

Cumberland, B.C.—March 7—Building owned and occupied by Canadian Collieries, Limited, was damaged. Estimated loss, $1,200. A total insurance of $845,000 was carried. The following companies are interested: Aetna, American Central, British Empire, Canadian Fire, Canada National, Century, Continental, Employers' Liability, Fireman's Fund, Guardian Assurance Company, Hartford, Liverpool and London and Globe, Northern, Norwich Union, Palatine, Providence-Washington, Phœnix of London, Phœnix of Hartford, Philadelphia Underwriters, Queen, Royal Exchange, Springfield Fire and Marine, Union of Paris.

An investigation is being made in Great Britain regarding the number of dogs there, and the amount of food consumed by them. It is estimated that there are between four and five million dogs in the United Kingdom, on 2,500,000 of which the owners are paying license taxes. The food consumed by them is the equivalent of that consumed by half a million people, supposing that everything they eat is fit for human food. It is understood that the committee intends to recommend a large reduction in the number of dogs

BRITISH COLUMBIA LOAN COMPANIES

Review of the Work of the Year—Suggested Amendments to the Statutes

The annual general meeting of the Mortgage and Trust Companies Association of British Columbia, was held in the board room of the Mainland Fire Underwriters' Association, Rogers Building, Vancouver, B.C., on Tuesday, the 16th day of April, 1918.

Mr. G. L. Smellie, the president, was in the chair. The notice calling the meeting was read by the secretary. The minutes of the last annual meeting of the association were read and on motion adopted.

Report of the Executive Committee.

The report of the executive committee was then read as follows:—

"Five special meetings of the Association have been held during the year, the first two being largely for the purpose of the alteration of the constitution, the third to meet Mr. Langmuir, the president of the Dominion Mortgage and Investments Association; Mr. Paton, president of the Manitoba Mortgage Loans Association, and Mr. Cassels, vice-president of the Toronto General Trusts, and the last two for the purpose of changing the date of the annual meeting.

"At the meeting held on the 24th January last, a report was received from the trust company section of the executive dealing with certain matters affecting trust companies and with section 7 of the 'Land Registry Act,' and your committee was instructed to take steps to have legislation enacted covering the matters referred to affecting trust companies.

"Owing to the fact that the government still holds in abeyance the request of the association through its solicitor for certain amendments to the 'War Relief Act,' the 'Moratorium' and the 'Land Registry Act,' as well as for certain alterations in the land registry office regulations, and that, with the possible exception of the 'Seed Grain Act,' no new legislation has been proposed that would appear to affect seriously the interests of the members of the association, your executive committee has found it necessary to hold only two meetings during the year, although numerous informal meetings and discussions have taken place between members and your solicitor, who have all endeavored to keep in as close touch as possible with all matters affecting your interests.

"Your committee has the assurance of your solicitor that the views expressed in your resolutions regarding the acts and regulations referred to have been constantly kept before the government and are still being pressed upon it, with every prospect that at least many of the amendments asked for will be secured during the present session.

"Since our last annual meeting the name of our association has, as you are aware, been changed from 'Mortgage Loans Association of British Columbia' to 'Mortgage and Trust Companies Association of British Columbia.' The date of our annual meeting has also been changed, and our constitution and by-laws otherwise so altered as to enlarge your executive committee and form a trust company branch of it, to which must be committed all matters purely affecting trust companies.

"The membership of the association now numbers 31.

"All of which is respectfully submitted."

Financial Statement for the Year.

The financial statement for the year ending April 15th, 1918, duly audited by Messrs. Griffith & Lee, Limited, was read by the secretary.

The president then said: "For the very reason that the report of the executive committee which the secretary has just read is so brief, I have very little to say regarding it, except to move its adoption. The reason referred to being that although the present session of the legislature is about drawing to a close, the government has as yet taken no action regarding the amendments which your solicitor was instructed to ask for, in accordance with your resolutions passed at the meeting of the association held on the 12th day of July, 1917. I have, however, a letter from your solicitor, which I will ask the secretary to read, after this report has been discussed, and which will show you the position in which he considers these matters now stand.

"I would only say further, in connection with the financial statement which the secretary read, that the small balance of cash in the bank, or a large portion of it, is likely to be used to cover your solicitor's fees and disbursements during the year.

"I beg to move, seconded by Mr. Sirrett, the adoption of the report and financial statement." Carried.

The secretary then read a letter from the association's solicitor, Mr. F. R. McD. Russell, dealing with amendments sought by the association at the present session of the legislature.

Mr. Russell, who was present at the request of the president, was introduced to the meeting and explained what the amendments being sought were and stated that he hoped to succeed in having most of them passed. He also explained the working of the new "Seed Grain Act," and the assurances of the premier that no unnecessary hardships would be worked under the act.

The following is a brief résumé of the proposed amendments:—

Trust Companies.

The advisability of an amendment providing for trust companies acting as official administrators is conceded, and will be passed unless some hitch occurs.

The amendment providing for trust companies investing in municipal securities is meeting with some opposition, the objection offered being that just now all municipal securities are not as good investments as they might be. It was pointed out that that was a matter for the trust companies; that they would take care to safeguard against poor investments; that if municipalities can borrow from outside trust companies, as they have and are doing, no good reason exists why they should not be able to borrow from our own trust companies; that the amendment asked for would enlarge the field for municipalities to borrow from, and that this would be advantageous just now in view of the existing restrictions against borrowing abroad. It was also pointed out that trust companies can invest in municipal securities in other provinces, and should have the same rights here. There is reason to think that we will succeed in obtaining the amendment this session. If not, we will get it through at the next session.

"Seed Grain Act."

Considerable correspondence and a number of interviews with the premier have taken place regarding this act. The passage of the act through the house was too far advanced, when it came to our notice, to prevent its being finally passed. The reasons why we opposed the act were placed before the premier and he has said in effect that if it can be shown that the act works any injustice a remedy will be provided and that in the practical working out of the act there is very little danger of a hardship being worked on any mortgagee, for the reason that no large amount would be advanced to any one farmer, and that a compensating advantage would be that many farmers would be in a position to get seed grain that otherwise they might not, and consequently be in a better position to provide for payment of interest, etc.

It was suggested that the government should co-operate with the association in carefully watching the operation of the act, with a view to making provision next year to remedy defects that might arise. The premier concurs in this, and is agreeable to meeting a representative of the association to discuss any point that might be suggested. The applicant when applying for advances, must give particulars of any mortgage against his property, and it might well be that we could arrange with the premier not to make advances, where mortgages exist, without the consent of the mortgagee.

On motion it was resolved that the matter of sending a delegation, with Mr. Russell, to interview the premier on the question of the "seed grain" and other "acts," be left to the executive committee to deal with.

On motion it was resolved that the thanks of the association be extended to the auditors for their services in auditing the accounts, and that they be asked to act for the ensuing year.

Election of Officers.

The election of officers to serve for the ensuing year resulted as follows:—

President, Mr. G. L. Smellie; vice-president, Mr. J. R. Waghorn; secretary-treasurer, Mr. Geo. L. Schetky. Ex-

ecutive committee, Messrs. A. C. Stirrett, R. Kerr Houlgate, A. E. Plummer, H. M. Forbes, G. H. Dorrell and J. L. Kerr.

Mr. John Appleton, secretary-treasurer of the Dominion Mortgage and Investments Association, having come to Vancouver especially to be present at this meeting, asked the association to give its assent to certain changes in the constitution of the Dominion Mortgage and Investments Association. It was the expressed wish of the members present at the annual meeting on March 25th last, that the executive committee be enlarged for the purpose of giving fuller representation to all parts of the Dominion. The resolutions passed provided that the executive should be composed of twelve members, in place of nine, and that each section, respectively representing loan, trust and insurance companies be composed of four members. Such a change, however, it was found can only be made with the consent of every member of the Dominion Association. The executive of your association will be furnished with copies of the proposed changes as drafted by the solicitors.

On motion it was resolved that the executive committee, on behalf of the association, be empowered to consent to changes in the constitution and by-laws of the Dominion Association as outlined by Mr. Appleton, and that they be also authorized to arrange with the Dominion Association for printing the annual proceedings of this association along with their own.

On motion it was resolved that the hearty thanks of the meeting be tendered to Mr. Appleton for his very useful information and suggestions.

BANK OF HAMILTON BRANCH IN MONTREAL

The Bank of Hamilton is opening a branch in Montreal on McGill Street, next to the Bank of Toronto Building. The branch will be under the management of Mr. R. L. Ellis, who was trained in the Bank of British North America, and was manager of their branch in Quebec City. He was also manager for five years of the Quebec Bank's main branch in the city of Montreal, and is well acquainted there.

ONTARIO FALL WHEAT A FAILURE

A summary of agricultural conditions in Ontario is contained in a report of the Ontario Department of Agriculture, dated May 13, 1918, as follows:—

"The sowing of spring grain is practically completed, and most of the fields are showing up encouragingly, as the catch of seed was remarkably good. In some of the Lake Erie counties corn already has been planted, and some early potatoes are above ground. Rainy and cool weather during the week, however, has delayed general growth. Mangels and other roots are likely to be sown earlier than usual this season.

"Fall wheat has picked up here and there with the recent rains, but the great bulk of the reports are to the effect that the crop is practically as great a failure as the province has yet known. Clover is doing well on the whole, although there are some patchy fields. The recent rains have suited the crop.

"Nearly all cattle are now on pasture, but the grass is not forward enough yet to give as good a bite as is desired, and the animals are not putting on much flesh, although in good general health. Beef cattle are selling at from 11 to 15 cents a lb. Dairy cows bring from $120 to $135.

"Most of the cheese factories are now open, although some of them are operating only every other day. The milk flow is hardly up to the mark. but the warm weather about due is likely to improve pastures and increase the yield.

"Hogs are commanding from $19.50 to $20.60 a cwt. Too many of them are being marketed unfinished on account of the shortage of the most suitable feeds.

"Fodder supplies are holding out well. There is still plenty of hay and straw on hand, although little hay or ensilage. Individual farmers have difficulty in procuring mill feeds, but a co-operative association in Dundas County last week distributed three carloads of bran and shorts to its members.

"Reports on the labor situation continue in the same strain as last week. but it is too soon to estimate the ultimate effect of the new calls under the Military Service Act upon production."

NEW INCORPORATIONS

National Iron Corporation, Limited, With Capital Stock of $3,000,000, Receives Charter

The largest company incorporated during the past week was the National Iron Corporation, Limited, with a capital stock of $3,000,000, and head office at Toronto, Ont. The Hattie Gold Mines, Limited, with $2,000,000 capital, the Zimmerman Manufacturing Company, Limited, and the Indian Peninsula Mining Company, Limited, with $1,000,000 capital, also received charters.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Trail, B.C.—Trail Insurance Agency, Limited, $10,000.

Eburne, B.C.—Eburne Steel Company, Limited, $100,000.

Kitchener, Ont.—Goudies, Limited, $100,000; E. W. Clement, W. P. Clement, R. M. Fisher.

LETHBRIDGE AND SOUTHERN ALBERTA

Farmers Prosperous—Bright Outlook for Good Crop—Lethbridge City in Good Shape—Energetic Board of Trade

(Staff Correspondence.)

Lethbridge, May 13, 1918.

Prospects in Southern Alberta and in the city of Lethbridge are excellent this spring. Hotel and housing accommodation are at a premium. One merchant told *The Monetary Times* that he was unable to hold his staff for the reason that they could not get accommodation for their families, while others had to have their homes in other towns and cities nearby. One or more first-class hotels are badly wanted; material is high, also labor, but sites could be obtained comparatively cheap. If the volume of cash business that is being transacted by the farm machinery concerns in a certain district may be taken as an indication of the prosperity of the farmers of that district, there is no doubt that the farmers in the Lethbridge district of Southern Alberta are as prosperous as any on the continent. In support of this assertion the business transacted by the Lethbridge branch of one of the leading implement concerns may be quoted as an example of the manner in which farmers in that district, by reason of their growing prosperity, are able to make their purchases. Out of $1,200,000 worth of business transacted by this branch in 1917, 92.7 per cent. was done in cash. The 1918 figures from the same district will, it is reported, be even better than in 1917.

Farmers' Financial Position Good.

Southern Alberta has had an ideal crop season, seeding by the time this is in print will be completed. In discussing the situation with one of the leading bankers, who is in very close touch with the farming community, *The Monetary Times* learned that planting in the Lethbridge district was done under very favorable circumstances, more fall ploughing was done last year than ever before, and the farmers are ardent followers of summer fallow, especially those, he said, who had come through the lean years. The farmers, as a class, had money; very few of them are borrowers and those that were, were quite entitled to receive credit. This banker said that the present spring was the easiest he had ever experienced in financing the farmers. The merchants, also, he pointed out, were prosperous, and trade with them was very good. Rain is needed as this is being written, but there is ample moisture in the ground to start the crop off well. Wheat is up in some places two inches. Mayor W. D. L. Hardie, when interviewed by *The Monetary Times*, was most optimistic about the outlook, and in regard to the city itself, said:—

Lethbridge Business is Thriving.

"I think it can be said without any fear of contradiction that Lethbridge to-day is the most prosperous city of its size in all Canada. The volume of business is very large, due to the large quantity of foodstuffs and coal shipped from this city. Over $50,000,000 worth of grain and other field products pass annually through Lethbridge, and from the coal production of its district the city enjoys a pay roll of from $150,000 to $200,000 per month. The farmers and miners do the bulk of their purchasing in this city.

Satisfied with Commission Government.

"The city government is in the hands of three commissioners who devote all their time and energies to the city and are paid a fair remuneration for their services. The three commissioners for legislative purposes are the council. Otherwise, each commissioner is responsible for his department. The plan has proven very successful in the city. This does not imply that the form is satisfactory to every citizen. It is not; but from the point of economical government there can be no comparison with the older form of councilmanic government—commission government is many laps ahead.

"It is said that it is not the form of government which counts, but the men of which it is composed. This in itself is a fallacy. In the old form of government there is not enough concentrated or individual responsibility, and there is lack of continuity. Elections are too frequent and too much politics involved.

"Individual responsibility builds up expertness, and expertness in civic government is the same as expertness in commercial life. No one ever argued expertness in civic government was a fact and everybody knows that the lack of expertness in commercial life spells failure. Why should we expect success in civic government without expertness.

"There is nothing so wasteful of money as civic governments. If the Canadian Pacific Railway were run on the lines of councilmanic government it would be in bankruptcy in less than five years. Every city admits the truth of such a statement. It is therefore difficult to understand why any one should desire to continue it who is free from political or other bias.

Almost Recovered from Collapse.

"The city is rapidly recovering from the catastrophe of crop failures that prevailed in the whole western country a few years ago. As it is to-day we, as a community, are well satisfied with everything, even to the tax collection. Even the collection of arrears of taxes is going on favorable and good final results are confidently expected from the indications of the primal results.

"As a result of over expenditure in the boom days, taxes are high, but with reasonable prosperity our people will be able to carry it until the day of relief comes from increased population. But even with our boom time debt, we are not any worse off than the great city of Toronto, where their per capita assessment and mill rate are about the same as our own.

"We confidently look into the future and see this part of the once 'Great Lone Land' now the 'Last Great West,' the most prosperous part of all the fair domain of our wonderful Canada."

Lethbridge Board of Trade.

As an example of what public spirited citizenship may do, *The Monetary Times'* representative last week had an interview with Mr. G. R. Marnock, president of the Lethbridge board of trade, without doubt one of the most aggressive in Western Canada. Mr. Marnock is a prominent citizen of Lethbridge and has been president of the board of trade since 1914, giving his services voluntarily to that body. Mr. Marnock's efforts in the interests of agriculture in Alberta are varied. He started in the Lethbridge district the livestock guarantors plan, by means of which reliable farmers and settlers are given advances to purchase pure-bred cattle, sheep, etc. This plan has been very satisfactory and there is scarcely a farmer now in the Lethbridge district who has not a good sprinkling of livestock on his farm. Mr. Marnock is vice-president of the Western Canada Irrigation Association, Hon. W. R. Motherwell, minister of agriculture in Saskatchewan, being president. This association is doing splendid work in the interests of the farmers of Southern Alberta, water supply with them being one of the difficult problems. Mr. Marnock goes on the assumption, and it is undoubtedly a correct one, that by enabling and co-operating with the farmers, to the end that they become prosperous, the whole community becomes prosperous. He has done some splendid work in the interests of more and better water for farmers. His efforts in getting the Dominion government, through its geological survey department, to do a considerable amount of work in Southern Alberta in the last two years in the interests of water supply, and which work has met with marked success, has been greatly appreciated by farmers in the district and neighboring towns. These all in turn help Lethbridge to build up a thriving business.

Mr. Marnock is also a member of the joint committee of commerce and agriculture, he was vice-chairman of the Southern Alberta Victory Loan Committee, working for two steady months without remuneration, he is also a member of the Canadian Council of the Round Table.

Mr. Marnock, who takes considerable interest in the financial credit of western cities, states that the city of Lethbridge is in good shape, or better than most other Western cities, but he perceives that financial credit can be maintained at high level only if we are careful custodians for our present and to-be creditors. Lethbridge, like every other city, has a large amount of taxes outstanding. They are advertising a tax sale the great bulk of which is subdivision property, inherited from the boom days. In discussing the iniquities of this system, Mr. Marnock said:—

"If the present tax sale is put forward as a seriously minded business proposition for finding buyers, as against a tax sale for taxes due up to the end of 1916, it must be remembered that an intending buyer in the present, or any other tax sale undertakes an obligation, in addition to 1915 taxes

which the sale is for, for 1916, 1917 and 1918 taxes right at the sale. He takes over these obligations, with their accrued and accruing loads of interest charges, which he must reckon he has to pay. Then either of two things must happen: the buyer must pay these subsequent taxes or the city must have further tax sales on the property. If the buyer does not pay up for 1916 and 1917 and the property comes again to tax sale, he not only has to protect himself again, but he has to wait for the expiry of a further one or two years for redemption. In the meantime the city waits and waits for the later taxes, and gets into a more and more unbusinesslike position.

Should Become Property of City.

"Now we arrive at this point: the city—that is indeed those who do pay their taxes regularly—maintains an expensive farce, which the city has to pay for, in the shape of an expensively advertised tax sale. Why should we be so illogical? Why not try to get things arranged, by an alteration in the law if necessary, so that property upon which taxes are not paid within, say, 18 months after due date (which is surely a highly generous leeway especially if another 12 months were allowed for redempton) becomes automatically the property of the city. The city could then deal promptly with anything that was saleable, ge the tax money, and carry on its business of supplying service to the citizens in a proper and businesslike manner.

"The city would then at least have a tangible asset in the shape of actual real estate to offer as collateral on a loan, instead of the paper asset of 'taxes overdue but not collected.' as at present. More than that; after the redemption period was over, the city would be actual owners of the property, and if it could then be disposed of by tender or by auction at greater prices than the amounts of the unpaid taxes, and if the original owner did not come along to claim the difference between the price realized and the amount of the taxes, the city as a whole, and not any one individual, would be the beneficiary. Neither a private buyer nor the city can have any actual property right, until the redemption period has elapsed.

"And if it were intended—and it would be quite right to maintain such an intention in bona fide cases of actual inability to pay at the present moment—the city should be, and could be, in a position to deal with the previous owner who desired to reinstate his ownership, more leniently than any private buyer at a tax sale could be expected to.

"As things are we are simply blinding ourselves and inviting the delinquent taxpayers to deceive themselves, and we are piling up further and quite unnecessary expense.

"A word may be said regarding the considerable areas of outside subdivision property that appear in the tax sale list. It may be presumed that these will fall to the city. It would have been better that this should have come about earlier, for valuable time will be lost in getting action on these areas which will lead up to their being solidified into acreages that can be leased or sold as farm land or garden plots.

Expenses Must be Cut Down.

"We have managed up till now, thanks in some measure to Mayor Hardie's careful management of the city's finances, and by the constraint of circumstances having made us content with less service in some directions than we had hitherto enjoyed, to stave off our creditors so far; but there must be an end to what we can exact from their patience. We may as well now be honest with ourselves and face the facts.

"We ought all to know, and if we do not know, we must learn, that in effect the city is but a co-operative association or company of shareholders; and that it cannot go on borrowing money from other people to carry on that service from day to day without ultimately ending in disaster. And the unfortunate thing is that, if we do not mend our ways, those who do their duty and stay by the company will pay most. Even so they will be very sorry that some of the members or shareholders have already lost out; but unfortunately these kindly feelings will neither help those who are left in to make any better arrangements for continuing and improving the city service, nor help them to make businesslike arrangements with the creditors of the city."

Messrs. Oldfield, Kirby & Gardner, of Winnipeg, have issued another number of their Oldgard Journal, containing items of interest regarding the firm and the members of its staff. Major H. L. Oldfield, youngest son of Mr. Oldfield, died of wounds in France on the 7th of April, 1918.

CANADIAN TRADE EXPANSION SINCE THE BEGINNING OF THE WAR

The trade returns for the fiscal year just ended as issued by the Census and Statistics Office, show that the volume of the external trade of Canada is now greater than at any previous period in the history of the Dominion. For the fiscal year ended March 31st, 1918, the grand total of the imports for consumption and exports of Canadian merchandise—taking no account of the movement of coin and bullion—was over two billions and a half of dollars.

Imports for consumption for the fiscal year 1918 were greater by 56 per cent. than for the year just prior to the war, namely, the fiscal year 1914. Under the stimulus of war orders, the export trade shows a still greater development, exports of Canadian goods for the fiscal year 1918 exceeding in value similar exports in 1914 by 256 per cent.

The total trade of Canada, imports for consumption and exports of Canadian produce, amounted to $2,502,549,635, for the fiscal year ended March 31st, 1918, while the value for similar trade for the fiscal year just prior to the war amounted to $1,050,045,583, showing an increase from 1914 to 1918 of $1,452,504,052. This increase is more than the whole trade for the fiscal year 1916. The imports of merchandise for the fiscal year 1918 were valued at $962,521,847, and in 1914 at $618,457,144, showing an increase of $344,064,703, whilst the exports of Canadian merchandise in 1918 amounted to $1,540,027,788, and in 1914 to $431,588,439, showing a betterment from 1914-18, of $1,108,439,349.

From 1914 to 1918 the exports of the mine increased from $59,039,054 to $73,760,502; the fisheries from $20,623,560 to $32,602,151; the forest from $42,792,137 to $51,899,704; animals and their produce from $53,349,119 to $172,743,081; agricultural products from $198,220,029 to $567,713,584; manufactured goods from $57,443,452 to $636,602,516.

During the fiscal year 1918 the customs revenue amounted to $161,588,465; in 1914 the similar revenue amounted to $107,180,578, showing an increase from 1914 to 1918 of $54,407,887, or about 51 per cent.

A PRACTICAL SUGGESTION FOR THE CONSCRIPTION OF WEALTH

A scheme has been originated by the "Financial World" of New York, suggesting that in raising money to carry on the war, an assessment be made, based on the income tax returns. Men are drafted into the army, industrial machines are commandeered, prices are fixed on commodities and materials; why therefore should the raising of money, one of the most essential parts of the whole operation, be left to the generosity, patriotism or good judgment of the people? Provision could be made for exemption where special circumstances made the assessment unjust, but the system would be a plausible method of applying the draft process to wealth and would do away with the strenuous effort and the uncertainty of voluntary campaigns. It would moreover insure the success of every campaign the demands on the individual would be evenly distributed, and no hardship would therefore ensue.

An objection is mentioned in the "Bache Review" for May 4th, namely, that the income tax does not go far enough to cover the whole population, and the small subscribers would be left untouched. This, it is pointed out, might be remedied by leaving the voluntary lists open. If, however, the system were to be adopted, and subscriptions from people of small means are desired, it would be better to base the levy upon a return of wages or other income in the case of every individual. The effect would be to enforce thrift, but on the other hand, the value of saving on individual initiative would be lost. This would be conscription in name only, as the forced purchase of war bonds would not be a financial loss. When a loan is floated in the market at present, the price is fixed primarily on the basis of market conditions. There is, no doubt, a small premium on government bonds, resulting from patriotism. This would probably only amount to a fraction of one per cent in the yield. Under a system of forced subscription this accordance with market conditions would no longer be necessary. It might easily become, therefore, a levy rather than a tax. Once the principle were established, the extent to which a levy of wealth was applied would depend to a large extent on the force of circumstances.

For Experienced Investors

Experienced Investors prefer SAFETY of principal to the glittering promise of large returns. In our GUARANTEED INVESTMENT we have provided the utmost of safety by a **double guarantee** in the form of a first mortgage on improved property and the further security of the Capital and Reserve of this Corporation. It is an Investment in which Executors and Trustees are authorized to invest Trust Funds.

IS TERM INSURANCE ADVISABLE?

Comparison With Other Policies—Useful in Exceptional Cases Only

In a discussion with an insurance manager recently on the merits of term insurance, he stated that his company advised against this class of insurance in most cases, because: (1) Its low cost was merely the measure of its temporary character; (2) on that account it would, in many cases, be a disappointment to those who took it; (3) owing to its lack of value as a collateral, it was more likely to be allowed to lapse and the benefit of insurance then ceased altogether.

He, moreover, believed that it was less advantageous to the company as a whole, because it tended to give it a body of transient policyholders who were liable to lapse their policies. With a more permanent form of insurance, a more cohesive body of policyholders was created, who became more and more identified with the company, and more loyal to it as the custodian of the fund they had built up for themselves in it, and whose goodwill was in itself an asset.

Term insurance has little to offer for the man who is looking for sound permanent investment or protection. For him a life or endowment policy is much more desirable and satisfactory in spite of its higher apparent cost. Under a term policy, he has no paid-up, cash surrender, or loan options. The policy is, in reality, the dearest that can be obtained, when account is taken of the one benefit which it guarantees—protection for a short, definite period. As a general rule, it does not participate in the profits of the company, and thus lacks a feature very desirable, in view of the present earnings of the life companies.

Use of Term Insurance.

There is no doubt, however, that term insurance has its uses, although, perhaps, even those uses could be met as well or better by an ordinary life policy, with its advantages of permanency, guarantees, participation, etc. Circumstances sometimes arise where some special form of protection is desired—e.g., partnership or other business insurance, where it is known definitely that insurance protection is needed for only a short period, and where there is no likelihood of it being continued beyond such set period. In such a case, it is apparent that term assurance exactly meets the need, and is to be recommended. Again, take the case of a business man, who is heavily involved in speculation or business ventures, and who wishes to have every cent of available capital free and yet at the same time protect his dependants. Here the renewal or convertible term plan would meet the case. His family would be protected at a comparatively low cost, and he himself would be in a position, in spite of any disability that might occur, to take out some more permanent form of insurance at a later period.

These are, however, exceptional cases. For the average man it is probably better to avoid this form of investment, and to purchase the more regular plans of insurance, life or endowment.

If a life insurance prospect were presented with four policies subject to annual premiums of $11.90, $16.60, $24.40 and $41.85 respectively, he would, unless he used due examination, pronounce the first one the cheapest. Yet he would be wrong, for paradoxical as it may seem, the dearest policy would be the cheapest, and the cheapest the dearest. The premiums given above are those at age 25, for a 20-year term, an ordinary life, a twenty-payment life, and a twenty-year endowment, respectively, and a consideration of the following figures will show what was meant by saying that the dearest policy is, in reality, the cheapest:—

Age 25.	Annual premium.	After 10 years.		
		Premiums paid.	Cash surrender value.	Net cost.
20-year term	$11.90	$119.00	......	$119.00
Ordinary life ...	16.60	166.00	$ 92.00	74.00
20-payment life ..	24.40	244.00	175.00	69.00
20-year endowment	41.85	418.50	360.00	58.00

	After 15 years.		
	Premiums paid.	Cash surrender value.	Net cost.
20-year term	$178.50	......	$178.50
Ordinary life	249.00	$ 147.00	102.00
20-payment life	366.00	290.00	76.00
20-year endowment	627.75	608.00	19.75

	After 20 years.		
	Premiums paid.	Cash surrender value.	Net cost.
20-year term	$238.00	......	$238.00
Ordinary life	332.00	$ 230.00	102.00
20-payment life	488.00	469.00	18.00
20-year endowment	837.00	1,000.00	*163.00

---

*Gain.

It will be seen that under the term policy there is no cash surrender value, whereas under the other three the surrender value increases more or less rapidly and is particularly large under the endowment contract. As the value of the assurance may be considered equal to the cash surrender value available, it will be seen that, if the policy were dropped at the end of any of the three periods, the apparently dearest policy would have cost him the least.

Element of Investment Lacking.

Every policy may be looked upon as containing two elements—viz., expense and investment. The term policy, covering as it does merely the cost of insurance, may be looked upon entirely as expense. With the endowment policy, the investment element is predominant, and the other policies range between these two extremes.

There may be circumstances when an applicant has need for insurance for a very short period. In such case, a term policy may suit his needs. With that exception, however, the other policies will be found more suitable. The extra money invested will bring profitable returns. And for somewhat the same reasons, a participating policy is generally to be preferred to the non-participating.

WORLD'S GOLD PRODUCTION

Official returns and estimates of the gold production of countries producing 80 per cent. of the world's output show that there was a falling off of about $32,500,000 in 1917, as compared with 1916, and a decrease of as much as $42,000,000, or nearly 9 per cent., as compared with 1915.

The world's gold production for 1917 and 1916 was as follows:—

	1917.	1916.
Transvaal	£38,323,921	£39,485,000
Rhodesia	3,495,353	3,895,000
West Africa	1,529,970	1,615,000
Total, Africa	£43,349,244	£44,496,000
West Australia	£ 4,121,700	£ 4,518,500
Queensland	774,800	914,000
Victoria	869,400	1,090,000
New South Wales........	361,400	459,000
South Australia	21,200	35,500
New Zealand	1,189,200	1,199,000
Tasmania	63,700	112,000
Total, Australia	£ 7,401,400	£ 8,308,000
India	£ 2,213,800	£ 2,295,000
Canada	3,174,586	3,952,500
Total, British Empire.	£56,139,030	£59,550,500
United States	£17,344,100	£19,012,500
Mexico	2,500,000	2,500,000
Russia	4,000,000	5,500,000
Other countries	8,000,000	8,000,000
Grand total	£87,983,130	£94,563,000

Of the decline in the output shown for 1917, the United States was responsible for £1,668,400, the Transvaal for £1,161,000, Canada for £778,000, Australia for £900,000, and Russia for an estimated reduction of £1,500,000.

War conditions, resulting in scarcity of skilled labor, dearness of and difficulty in obtaining machinery parts and materials are responsible for a large part of the decline in production.

The government of Argentina has decided to purchase $5,000,000 worth of railway material in the United States and England.

THE WAR DEBTS OF THE WORLD

Great Britain's Debt and Her Loans to Allies—Gold Reserves of the Different Powers

The Federal Reserve Board of the United States has recently issued an important and comprehensive bulletin on the national debts of the chief nations of the world, together with an analysis of the credit conditions of the belligerents. This is the most valuable and authoritative survey of the subject that has come to our attention.

It is pointed out that during three and one-half years of war, the 12 principal belligerents show an aggregate increase in their national debts of approximately 111.7 billions of dollars. Of this sum 72.4 billions represent the increase in the public debts of the Entente Allies, including the four British Dominions and the United States. The increase in the case of Germany and Austria-Hungary amounts to 39.3 billion dollars. It should be noted that these war expenditures take no account of the sums raised by taxation, which in the United Kingdom especially amount to a very considerable part of total expenditures.

Position of the United Kingdom.

In the United Kingdom the increase during this period in the national debt, amounted to 24,178 millions of dollars. This includes, however, 7,027 millions loaned to its allies up to February 9, 1918. From the United States Great Britain has received between the period April 1, 1917, to March 18, 1918, $1,370,000,000. It will thus be seen that, if the present credit of $5,000,000,000 be included, Great Britain has raised on war account approximately $30,000,000,000 since the outbreak of hostilities in 1914. In addition, the brunt of the burden in financing the other allies has fallen chiefly upon British finance, and only within the last year has the United States made its weight felt.

While Russia is presumably out of the war, its finances are a matter of the utmost concern to Great Britain, France and the United States. In his recent budget address, Mr. Bonar Law announced that the United Kingdom had determined to write off one-half of Russia's indebtedness to it, on the same principle that applies to bad or doubtful debts in private business. While this is not the place to discuss this problem, it may be remarked that, in our judgment, Russia must sooner or later make these debts good if it hopes ever to occupy its right place within the family of nations. However that may be, it is important to observe that the Russian national debt at the end of 1917 stood at 20,291 millions of dollars. Between January, 1914 and September, 1917, the Imperial Bank of Russia advanced to the government 7,800 millions of dollars. As this is a state institution, the transfer amounts to a mere exchange of credits.

Finances of the Central Powers.

Germany and Austria-Hungary have not so heavy an external burden to carry as the United Kingdom and the United States—nor are their resources anything like so buoyant and strong. The Central Powers have financed Turkey and Bulgaria, practically carrying the entire war burden of both these nations. The neutral countries of the world, even those that have gained in trade and commerce as a result of the war, have been obliged to float large domestic loans for mobilization purposes, particularly Switzerland, Spain, Holland and Denmark.

The United Kingdom and the United States have as yet made little use of paper-money issues to finance the war; and remain on a strong and sound gold basis. On the continent it has been different. There treasury bills and certificates have been discounted by the Bank of France, the Imperial Bank of Germany, and the other central banks of issue. As a result, and as might have been expected, inflation of currency has aggravated the upward trend in prices; and in the enemy nations has jeopardized their credit position.

Gold Reserves and National Credit.

It must not be supposed that there is any direct or necessary connection between gold reserves and soundness of national credit. The United Kingdom, certainly before the war, the strongest financial nation in the world, has always economized in the use of gold; not because it could not secure gold, but because of its tremendous financial strength. Sixty per cent. of the total world output of gold, each year, was produced within the empire, and normally found its way to London—the gold market of the world. From there it was distributed among those nations comparatively weak in credit, or requiring gold because of the commercial habits and practices of their people. The following table, showing the gold holdings and paper money circulations of the chief belligerents, will prove instructive:—

Country.	Gold (millions).	Note circulation.
France	$ 919,968	$1,289,855,000
Great Britain	185,567	144,566,000
Japan	112,296	....
Italy	232,965	324,824,000
Russia	863,371	841,174,000
United States	1,668,268	1,246,488,000
Austria-Hungary ...	311,963	432,341,000
Germany	363,670	692,442,000

It will be observed from this table that the total amount of gold in the possession of the Central Powers amounts to $675,633,000, and their combined paper money issues to $1,124,738,000. Now, according to the most recent figures available, the Reichsbank, the central bank of Germany, claims to have practically that amount of gold in its own vaults. It is extremely difficult to prove the correctness of this claim, but it should be noted that even when the United States was neutral, American financiers refused to credit the genuineness of the weekly statements of the Reichsbank. Information secured indirectly went to substantiate American opinion, that part at least of the alleged gold holdings consisted of government securities. Whatever the facts concerning this may be, it has been established that Austria-Hungary has been compelled to send the greater part of its gold reserves to Germany. On paper, the Reichsbank is able to make a good showing, but it must not be forgotten that the Central Powers have not only to support German credit at home with this gold reserve, but to make use of it in large measure in such foreign trade as they may be able to carry on.

A study of the figures presented would seem to indicate, at first blush, that the world is headed toward bankruptcy and ruin. However, we have it on no less authority than Sir George Paish, editor of the London "Statist," that the financial fabric of the United Kingdom, the United States and France, has been actually strengthened by the strain to which it has been subjected by war. Organization, elimination of waste, the inculcation of thrift, the introduction of the latest machinery and scientific methods, and, above all, united national effort mean greater control over environment than ever before. And through control of environment the nations will reach higher levels of social and economic achievement.

GRAND TRUNK RAILWAY POSITION

The following is a statement of the business of the Grand Trunk Railway Company for the year ending December 31st, 1917:—

Gross receipts	£10,725,482
Working expenses	9,002,894
Net traffic receipts	£ 1,722,588
Other income	546,151
Net revenue receipts	£ 2,268,739
Net revenue charges	2,242,460
Surplus	£ 26,279

While the gross receipts of the company showed a considerable increase, the advance in the cost of operation more than offset this, and the result was that in place of the surplus of £800,000 in 1916, only a small surplus is realized in 1917. The annual report states that the company made most strenuous and continuous efforts during the year to obtain from the railway commission of Canada, permission to increase rates. This permission has, of course, been since secured, an increase of 15 per cent. having been granted from March 15th, 1918. An interesting point in the company's statement is that passenger traffic during the year decreased, while all other forms of traffic increased.

Fires occur in Canada in the ratio of one to every 600 people, and in Europe in the ratio of one to every 3,000 people.

NEW BRUNSWICK HAS NEW FORESTRY SYSTEM

The Commission of Conservation in the monthly bulletin for May, states that through the recent enactment of the new forest and forest fires act, the province of New Brunswick has aligned itself with the most progressive governmental agencies on the continent in forest conservation. The administration of the act will be under the minister of lands and mines. A provincial forester will be in charge of the administration of scaling, enforcement of cutting regulations on Crown lands, continuation of the forest survey, forest fire protection, and the enforcement of the laws and regulations concerning fish and game. The organization of the staff is now under way.

The merit system of appointments will be strongly promoted through the appointment of a forestry advisory commission, consisting of the minister and deputy minister of lands and mines, the provincial forester, one prominent lumberman selected by and representing the licensees of Crown timber lands, and one other lumberman or forester associated with the ownership or management of Crown-granted forest lands. This commission will supervise appointments, which are to be based upon a practical examination, written and oral, designed to test the knowledge and ability of the applicants to perform the duties of the office which they seek.

The provisions relative to forest fire protection are based upon the most advanced legislation in the several provinces and states. The organization will cover Crown timber lands, licensed and unlicensed, as well as the larger bodies of timber land in private ownership. A fire tax of one-half cent per acre per year is to be collected from licensees, supplemented by an allotment from the wild land tax and by an annual appropriation which will bring the protection fund up to $100,000 per year.

It is to be anticipated that the consolidation of all these lines of forestry activities in a single organization, under a technically-trained head, will make most decidedly for efficiency in results and economy in administration.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Huron County, Ont.—The county has sold to local purchasers a block of $140,000 5½ per cent. bonds.

London, Ont.—The city is offering for sale 6 per cent. debentures in sums of $100 or any multiple thereof.

Cobourg, Ont.—The town has sold a block of $38,100 6½ per cent. bonds, payable in 20 annual instalments.

Trail, B.C.—Messrs. C. H. Burgess and Company, of Toronto, have purchased a block of $21,400 6 per cent. bonds.

Regina, Sask.—The city is in the market at the present time for $1,000,000 to meet 3-year treasury bills which are maturing.

Victoria, B.C.—Messrs. MacNeill and Young, of Toronto, have purchased $48,000 city of Victoria 5 per cent. local improvement bonds, due 1924-1925.

Lynville S.D., Man.—Messrs. H. O'Hara and Company, of Toronto, have purchased a block of $1,300 7 per cent. bonds, payable in 15 annual instalments.

York Township, Ont.—Messrs. W. L. McKinnon and Company, of Toronto, have purchased a block of $35,000 6 per cent. public school debentures, payable in 25 annual instalments.

County of Northumberland, Ont.—The Dominion Securities Corporation, of Toronto, has purchased $40,000 6 per cent. debentures, due $10,000 in 1923, $10,000 in 1928, $10,000 in 1933 and $10,000 in 1938.

Sandwich West, Ont.—Messrs. C. H. Burgess and Company, of Toronto, have been awarded a block of $20,000 6 per cent. bonds payable in 10 annual instalments. The proceeds will be used for drainage purposes.

Smiths Falls, Ont.—Mr. J. A. Lewis, town clerk, will receive tenders for debentures amounting to $28,000 until Monday, May 20th, at 6 o'clock p.m. The debentures are 20-instalment consolidated debt, bearing interest at 6 per cent. per annum.

Quebec, Que.—More than one-half the civic 6 per cent. bonds, authorized by the legislature, have been disposed of, and Mr. Verge, city treasurer, has every reason to believe that the full amount of the city loan, amounting to $479,000, will be subscribed by Quebec citizens.

Hamilton, Ont.—The city's issue of $346,040 6 per cent. 10-instalment debentures has been awarded to Mulholland, Bird and Graham and Housser, Wood and Company, joint account. The successful tenderers bid 98.93, Wood, Gundy 98.921, Dominion Securities 98.915, Canada Bond 98.89, and A. E. Ames and Company 98.877.

North Vancouver, B.C.—The council of the district of North Vancouver intends placing a by-law before the people amounting to $40,000 for ratification. This money is to be utilized for the purpose of installing a waterworks system on the east end of the district, and particularly to supply the industries on the north arm of the inlet.

Victoria, B.C.—The report of the sale of $1,000,000 city of Victoria 6 per cent. bonds, appearing in our issue of May 3rd, should have read as follows:—

National Bond Corporation	$ 400,000
Oxford Securities Corporation, Limited	100,000
Dominion Securities Corporation	250,000
Bank of British North America	150,000
Housser, Wood and Company	100,000
	$1,000,000

Toronto, Ont.—Sealed tenders will be received by T. Bradshaw, commissioner of finance, for the purchase of $736,000 bonds issued for hydro-electric purposes. The bonds are an obligation of the city at large, are issued in coupon form, with provision for registration of principal, bear date 2nd July, 1917, and are in denominations of $1,000. They are payable both as to principal and interest, in gold, in Toronto and New York, and carry interest at the rate of 5½ per cent. per annum, payable half-yearly on January 1st and July 1st, the first half-yearly instalment of interest being due and payable on July 1st, 1918.

Edmonton, Alta.—The tentative agreement made between Mayor Evans and P. Burns Company regarding the construction of sewer line extension in N. Edmonton, was adopted by the council. A first reading was given a by-law providing for the expenditure of $45,000 and the issuing of debentures to cover this sum. The by-law will go before the public utilities commission and if permission is given to carry out the plan, it will reach its final stages at the next meeting of council. The proposal is to construct a sewer extension line along 120th Avenue, from the Fort trail to the lane between 70th and 71st Streets. This will serve the Burns packing plant at 73rd Street, which firm has agreed to pay outright one-half of the cost from that point. The company will also buy the debentures which run for 40 years with interest at 6 per cent.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from April 29th to May 3rd, 1918:—

School Districts.—Kingslyn, $600 8-years not ex. 8 per cent. annuity; S. R. Common, Hazel Cliff. Home, $2,600 10-years 8 per cent. annuity; C. S. Rude, Spalding. Rocky Hills, $1,800 10-years not ex. 8 per cent. annuity; H. J. Unruh, Lydiard. *Five Mile Creek, $2,200 10-years not ex. 8 per cent. annuity; Louis Lazarus, Wood Mountain. *Kingsmead, $2,000 10-years not ex. 8 per cent. annuity; Arthur J. King, Cadillac. Springbrook, $1,000 10-years not ex. 8 per cent. annuity; C. W. Brown, Ft. Qu'Appelle. Clarke, $2,000 10-years not ex. 8 per cent. instalment; A. W. Clarke, Rex. *One Mile Coulee, $2,000 10-years not ex. 8 per cent. annuity; Paul Vandal, Melaval. *Glenview, $2,000 10-years not ex. 8 per cent. annuity; N. F. Maruska, Vanguard. *Lynthorpe, $1,000 5-years not ex. 8 per cent. annuity, H. Simpson, Lynthorpe. *Shackleton, $1,000 10-years not ex. 8 per cent. annuity; Jas. W. Casburg, Shackleton. Craik, $9,600 20-years not ex. 8 per cent. annuity; C. M. Truman, Craik. Martindale, $2,200 10-years not ex. 8 per cent. annuity; Ernest Grant, Pense. Hester, $2,300 10-years not ex. 8 per cent. annuity; Henry Moen, Hughton.

Villages.—Abbey, $3,500 10-years not ex. 8 per cent. instalment; Abbey, $1,000 5-years not ex. 8 per cent. instalment; F. E. McDonald, Abbey. Consul, $1,000 10-years not ex. 8 per cent. instalment; Alex. Dunbar, Consul.

The following is a list of debentures reported sold from April 29th to May 3rd, 1918:—

School Districts.—Elfros, $3,000; E. B. Jonah, Regina. Eagle Creek, $1,600; Nay and James, Regina. Maxwell, $1,200; Great-West Life Assurance Company, Winnipeg.

Rural Telephone Companies.—Hilldrop, $5,500; W. L. McKinnon and Company, Regina. Melaval, $700; Nay and James, Regina.

Village.—Pennant, $1,500, $1,750; J. E. Lindsay, Battrum.

---

*Being sold by the Local Government Board.

DETAILS OF VICTORY LOAN EXPENSES

Further information regarding the expenses in connection with the last war loan has been made public during the past week.

A statement was tabled in the House on Saturday, May 11th, showing the commissions paid to Victory Loan salesmen. They were as follows:— Ontario, $430,915; Quebec, $188,570; New Brunswick, $16,500; Nova Scotia, $35,050; Prince Edward Island, $3,000; Manitoba, $43,250; Saskatchewan $35,500; Alberta, $20,000; British Columbia, $6,500. Total $779,285.

On Monday, the Hon. A. K. Maclean stated that the total remuneration paid to brokers and bond dealers in connection with the Victory Loan was $779,285, while canvassers got $1,135,515. The Ontario brokerage houses got $430,915, some of the larger amounts being: Dominion Securities Corporation, $54,975; A. E. Ames & Company, $47,000; Wood, Gundy & Company, $63,325; Osler & Hammond, $18,000; Canada Bond Corporation $20,000; Bankers' Bond Company, $15,000; W. A. Mackenzie & Company, $17,500; Brent, Noxon & Company, $12,000; R. A. Daly & Company, $10,000; Æmilius Jarvis & Company, $10,000; R. C. Matthews & Company, $10,000.

Wood, Gundy & Company refunded $15,000 to the government, the Dominion Securities refunded $10,000, and A. E. Ames & Company, $5,000.

The total of subscriptions reported for Ontario was $203,986,500, Quebec came next with $94,286,250, Manitoba third with $32,326,600, Saskatchewan fourth with $21,510,500, and Nova Scotia fifth with $19,515,250.

PROSPECTS OF RAILROAD BUSINESS

Canada Will Continue to Attract Tourists—New Industries Locating in Canada

Grand Trunk officials anticipate a considerable volume of war time travel this season. With the prevailing stress of war conditions a very general desire is being shown to escape for a few weeks from the cities to the regions where quiet and rest may be obtained. It is believed that a very large number of travellers from the United States will seek the Canadian lake-land resorts, such as Algonquin Park, Temagami Forest Reserve, Muskoka Lakes and the Lake of Bays. There are no reserves in the eastern section of the United States that compare with Algonquin Park or Temagami, where there is everything that is dear to the heart of the lover of out-door life. Algonquin Park has an area of about 4,000 square miles and has within its boundaries more than 1,500 lakes and streams. With her great natural attractions Canada will continue to attract the tourist, say the railroad men.

Progress in Eastern Provinces.

With the brisk demand prevailing for all forms of manufactured products, many new industries continue to be attracted to eastern Canada.

Along the lines of the Grand Trunk Railway system the increase in the number of industrial plants has been very marked. More than 40 large concerns have located on the railway in Ontario and Quebec during the past 12 months. These new plants represent a capital investment of nearly $11,000,000, and will employ 6,000 hands.

Extensive additions have also been made to existing plants. These extensions, at 12 representative points along the Grand Trunk, have called for an increase in capital investment amounting to several millions of dollars, and the employment of some thousands of extra hands.

Mr. Wm. P. Fitzsimons, commissioner of industries, Grand Trunk Railway system, states that the demand for new sidings, and additions to existing sidings, to take care of the increased industrial effort has been continuous. While cooperating in every way possible with the boards of trade and committees and individuals interested in industrial development, the railroad has done all in its power to promote increased production of farm products. A special train carrying exhibits of grain, roots, grasses, poultry and model dairy apparatus visited a large number of farming communities where lectures on better farming were delivered by agricultural experts.

ALBERTA FIRE INSURANCE REPORTS

The advance report of the Superintendent of Insurance for Alberta for the year 1917 shows total fire premiums of $2,556,816.78. The losses for the year amounted to $853,787.98, or approximately ⅓. There are 30 Canadian companies, 33 British and Colonial companies, and 36 United States companies doing business in the province. The premiums of the British and Colonial companies totalled over $1,000,000, and their losses were a little over $300,000, or 28 per cent. The business of the Canadian companies was approximately $650,000, and their losses about 34 per cent. of this. The American business totalled almost $800,000 and losses 42 per cent.

OCEAN ACCIDENT AND GUARANTEE CORPORATION

The Ocean Accident and Guarantee Corporation has enjoyed another very successful year. Their statement appears on another page of this issue. Premiums for the year totalled $15,802,245, and the sum of $8,246,636 was paid in claims. The company now has a balance on hand of $13,519,747, an increase of almost $3,000,000 over last year. The total assets are now $24,494,000.

This company has just completed its 47th year of business, and has written accident lines in Canada since 1895. It now writes fire, automobile, personal accident, plate glass, guarantee, employer's liability, public liability, and teams' liability insurance. Mr. Charles H. Neely, who has been for some time manager in Canada, has now become general manager for the United States where he will have wider scope for his abilities in the insurance field. His successor in Canada, Mr. Perry, has been with the company for many years, latterly in the United States.

MORE MONEY WANTED FOR TORONTO HARBOR

On Thursday, the 9th instant, a delegation from the Toronto City Council, the Toronto Board of Trade, and the Toronto Harbor Commissioners went to Ottawa with a view to obtaining further Dominion expenditure upon the Toronto harbor works. They requested that the government spend $152,000 this year, and an additional $496,000 next year to protect work already done on the scheme. The city of Toronto, it was stated, had already spent $1,240,000, and the Dominion government $187,000. According to the agreement with the Dominion government, the latter should have spent $1,450,000.

In reply the prime minister impressed upon the delegates the extreme urgency of economy. The government, he said, did not have an unending supply of funds; work had been stopped on the Welland Canal, on the Hudson Bay Railway, in Halifax and St. John. Hon. Mr. Carvell, minister of public works, said that he would be in favor of such expenditure on the harbor scheme as was necessary for purely business purposes, but he did not think that at the present time expenditure on sections which were merely part of a beautification scheme, would be justified.

THE TRANSPORTATION TAX

By J. L. Payne

It can scarcely be said that the decision of the Board of Railway Commissioners to advance freight and passenger rates has been received with universal approval. It is never a popular thing to increase the scale of taxation. But, all said and done, there are two views of the matter which are fairly entitled to consideration. First, that the railways had a strong case, based on the rising cost of operation; and second, that the increase allowed is, after all, a relative thing. Let us look at these aspects of the matter.

Railways are no more exempt from the enhanced cost of living than are manufacturers, merchants or other citizens. They have been compelled to pay higher wages and higher prices for all classes of commodities. These advances in cost have been directly reflected in operating expenses. The Railway Commission could not ignore the stern logic of facts. Hence the decision given. It was resisted by boards of trade and by shippers generally; but the weight of argument was held to be on the side of the railways. There the matter rests. Like many other drastic changes which have been made in these times of stress and upheaval, it has been accepted largely because further resistance would be futile.

There is comfort in the reflection, however, that while there has been an increase in freight tolls, the measure of the tax involved has not been actually increased. A simple illustration will make that contention plain. Assuming that the freight charges on a carload of wheat from Winnipeg to Toronto were $100 in 1913, the tax on the value of the commodity would have been less than 8 per cent., on the basis of 40,000 pounds at $1 per bushel. To-day, owing to the higher market value of wheat, the tax would be less than 4 per cent. Further elaboration is unnecessary to make that point clear; and it cannot, as a matter of practical reckoning, be disregarded.

The opposition to the appeal of the railways came chiefly from the west, and it had its foundation in the existing prosperity of the Canadian Pacific. It was admitted, however, that the other lines were hard pressed by prevailing conditions. Obviously, the Canadian Pacific did not need higher rates; but the question which at once arose was, How can the rates be increased generally without adding to the already adequate earnings of the pioneer road? Discrimination would result in diverting traffic to the Canadian Pacific. It was a hard problem. In the end, it was solved by giving higher rates to all the lines, and providing that the additional revenues of the Canadian Pacific should pass into the Dominion treasury. This novel course has practically satisfied western sentiment.

However unpopular has been the increase in transportation rates, it will be seen that it has been given effect at a time of highly inflated values; and, in the final analysis, all taxes must be measured against the value of the thing taxed. We shall probably, and perhaps unavoidably, see this principle of adjustment applied in other directions. Everything is abnormal, and until the period of reconstruction is well under way after the war, the unusual and the extraordinary may be expected.

MEDICINE HAT LIFE UNDERWRITERS

Local Branch of Life Underwriters' Association is Reorganized—Addresses from President and Secretary of Dominion Association

On Friday, the 26th of April, a meeting of the life underwriters of Medicine Hat was held at the Assiniboia Hotel, and it was decided to reorganize the local branch of the Life Underwriters Association. Mr. J. T. Wilson, Halifax, president, and Mr. J. H. C. Graham, Toronto, secretary of the Life Underwriters Association of Canada, were present and explained the aims and objects of the association, the work done in the past and what they hoped to do in the future.

Mr. Graham outlined the purposes of the association. "It is not a selfish organization. It was formed not only to benefit the agents, but also the public. To the agent it is what the law society is to the lawyers, or a medical association to the doctor. To the public it ensures by the raising of the ethical standards of the agents, a square deal. By means of essay competitions an interchange of ideas amongst agents all over the continent is effected, the winning essays being published in all the insurance papers. Another feature is the stimulation of interest in legislative matters affecting insurance. The work of the association is favorably known and the superintendents of insurance in every province co-operate with organizations with mutual benefit.

"Improved legislation was needed which had the support of the provincial superintendents, and the association should be united from coast to coast, and work for uniformity in all provincial legislation. Another important feature is the education of the agent and the public. Success in our business depends upon two things, first a knowledge of the business, and second, ability to impart that knowledge to prospects effectively." Mr. Graham also pointed out the importance of life insurance and referred to the service which the association had rendered in connection with the Victory Loans and other patriotic work. He said that the local association should furnish the public with insurance news through the press and in every way encourage publicity.

Mr. Wilson who spoke next referred to the bright future for Medicine Hat along with the rest of the Canadian west. A lot would depend on the strength of the local association, as the chain was no stronger than its weakest link.

To Promote Co-operation.

Mr. Wilson also outlined the history of the association from its inception in 1906 until the present time, during which interval the membership had increased by 400 per cent. "The spirit of co-operation is the very essence of the life underwriters' movement. We see evidence of co-operation all around us. In Saskatchewan there are 352 co-operative societies whose turnover last year was over $4,000,000, and there is also the Grain Growers' Association, into which the farmers combined for their mutual benefit. Our own country is an illustration of co-operation. Prior to Confederation the provinces existed as separate units, exposed to all the difficulties of isolation. The Fathers of Confederation saw it was better to get together, and as a result of that co-operation Canada has built railroads, large cities and industrial centres, and is now developing a ship building industry, which will be one of the largest in the world."

Mr. McTeer, of Calgary, said that the association was a good thing to have in any community. Short speeches were also made by Messrs. P. J. Daly, J. Currie and J. King. The following officers were elected:—President, P. J. Daly; vice-president, J. Currie; secretary, J. King; executive, R. H. Green, F. C. Legh, A. W. Lang and J. A. Bell.

Shawville, Que.	Bank of Ottawa.

Branches Closed—None.

---

*Sub-branches.

AGRICULTURAL CONDITIONS IN ONTARIO

According to a report issued by the Ontario Department of Agriculture on May 6th, spring seeding is far advanced this year compared with other years. The prolonged open weather has favored work, and offset any shortage of labor which there may be. It is estimated that fully 40 per cent. of the fall wheat land has been ploughed up or cultivated with barley or spring wheat. The clover crop is not very promising in some districts, but it is thought that the average yield will be fair. Live stock are somewhat lighter in weight than usual. The price of milk and cheese will be good. Hogs are being marketed more slowly than formerly, and it is reported from some counties that production is being increased. The difficulty is, of course, that of feeding. Hay and straw are reported to be plentiful, but the supply of grain and ensilage is small. Generally speaking, however, there is sufficient to carry live stock over until good pasture is secured.

CUTTING DOWN MUNICIPAL EXPENDITURES

A whole-hearted sympathy with the needs of the time is being shown by the Northwest, says the Northwestern National Bank Review. Municipalities have given many evidences of sacrificing cherished schemes of improvement which, when gauged by the national need, have fallen into the class of civic luxuries. Minneapolis, for instance, is a city which normally would have considered a 1918 programme amounting to about $2,000,000. The sub-committee of the capital issues committee of this district requested municipal authorities to scale down the proposed list of expenditures. A budget cut down to $1,000,000 was presented to the sub-committee; but the municipal authorities promptly acquiesced when it was returned still further reduced to $400,000. Similar sacrifice has been shown by St. Paul and Duluth and it is being matched by almost all the cities in our district—even bettered, as is shown by such instances as the practical abandonment of their entire programmes by the cities of Grand Forks and Red Wing.—From "Commercial West."

PUBLICATIONS RECEIVED

Frenzied Liberty.—By Otto H. Kahn. Extracts from address given at the University of Wisconsin, January 14th, 1918. This booklet discusses the war in its relation to the movement towards internationalism; the relative burdens upon the rich and poor; and maintains that the rich are incurring just as much in service and in taxation, as the poor.

Canadian Independence.—By Z. A. Lash, K.C., LL.D. An address to the Ontario Bar Association, Toronto, February 22nd, 1918. Mr. Lash discusses some of the constitutional questions which would be involved in a separation from the Empire, and the position in which our legislatures, governments, and law courts would find themselves. We would have nothing to gain in trade or revenue, he says, and our public expenditure would necessarily be greater. While the present arrangement is not entirely satisfactory, the solution does not lie in independence. Mr. Lash summarizes his conclusion as follows:—"Neither constitutionally, financially, nor in importance as a factor in the world's advancement would Canada advance her present position or her prospects for the future by becoming independent."

War Time Control of Industry.—By Howard L. Gray, Professor of History in Bryn Mawr College. This book relates in a clear and comprehensive manner the experience of Great Britain in the control of industry since the 4th of August, 1914. Each chapter is devoted to a separate industry. The government assumed control of the railways the first day after war was declared, and the author points out that in its administration of the railways, the government has been perhaps more fortunate than in any other of its essays in state control. Regulation of munitions and labor, the coal mines, wool and woolens, shipping, food and its production, followed in due course. As the author himself states in the preface, a necessary defect of the book is its incompleteness. The account is, nevertheless, not only of scientific interest but is also of intense practical use in America and Canada, and wherever industry has not thus far been so fully taken in hand by the state. Macmillan and Company, New York, 1918; $1.75.

IRON ORE IN BRITISH COLUMBIA

According to Dr. S. F. Tolmie, M.P., there are no fewer than 18 deposits of iron ore on Vancouver Island, and he points out that the argument that the iron deposits of British Columbia are not of sufficient size to justify the establishment of modern blast furnace plants, no longer holds. Regarding the quality of the ore, he points to the fact that the United States ship "Nebraska" was built of Iron Lake steel, made from the iron ore of Texada Island.

CROP PROSPECTS IN WESTERN CANADA

The wheat of 1918 upon which so much depends is already showing above the ground according to a detailed crop report received at the head office of the Canadian Northern Railway here recently from the agents along its lines in western Canada.

Out of 269 agents reporting all but some 64 reported seeding of wheat completed as of the week ending May the 4th. The remainder would have sufficient time from that date to complete their operations.

Advice that wheat was showing above the ground, in some cases to a height of several inches, came from 38 agents.

The farmers are now turning to the seeding of coarser grains. Some 68 reported oats seeding as underway. Only a few have reported on barley.

PRODUCTION OF GRAIN IN 1917

According to the International Institute of Agriculture the total production of wheat in Denmark, Spain, France, Great Britain, and Ireland, Italy, Luxemburg, Norway, Netherlands Sweden, Switzerland, Canada, United States, India, Japan, Algeria, Egypt, Tunis, Argentina, Uruguay, Union of South Africa, Australia and New Zealand in 1917 was 2,242,477,000 bushels, compared with 2,173,162,000 in 1916 and 2,479,519,000 the average of the three years, 1914-16. The probable consumption of wheat in the same countries during the grain year, August 1st, 1917, to July 31st, 1918, is estimated at 2,157,682,000 bushels.

The total production of rye in Denmark, Spain, France, Ireland, Italy, Luxemburg, Norway, Netherlands, Sweden, Switzerland, Canada and the United States in 1917 was 158,010,000 bushels, compared with 167,778,000 in 1916, and with a three-years average of 172,276,000. The consumption of rye in 1917-1918 is estimated at 146,010,000 bushels.

The total production of barley in the same countries as for wheat, less India, Argentina, Uruguay and South Africa in 1917 was 634,853,000 bushels compared with 611,669,000 in 1916 and a three years' average of 626,981,000. The consumption of barley in 1917-18 in the same countries as for production is estimated at 593,824,000 bushels.

The total production of oats in the same countries as for wheat less India, Egypt, Uruguay, South Africa and Australia in 1917 was 2,663,112,000 bushels compared with 2,335,442,000 in 1916 and a three years' average of 2,408,611,000. The consumption of oats in 1917-18 in the same countries as for production is estimated at 2,257,457,000 bushels.

The production of corn in France, Italy, Spain, Switzerland, Canada, United States, Japan, South Africa and New Zealand in 1917 was 3,334,556,000 bushels compared with 2,739,570,000 in 1916 and a three years' average of 2,943,866,000. The consumption of corn in 1917-18 in these countries is estimated at 2,856,684,000 bushels.

The surplus shown above in the case of wheat is due to the large crops in Argentina, Australia and India. On account of the great distance of these countries from the centres of consumption and the difficulties of transportation, it is still indispensable that production should be intensified and consumption restricted in the countries of the northern hemisphere.

During the coming season, the commission of conservation will continue, under the supervision of Dr. C. D. Howe, of the Faculty of Forestry of Toronto University, the study begun last year, of the conditions on cut-over pulpwood lands in Eastern Canada.

BANKING HOURS IN TORONTO TO BE CHANGED

On and after June 1st, the hours for banking in the city of Toronto will be 9.30 to 2.30 instead of 10 to 3 as formerly. This change will result in a larger proportion of the business being done in the morning, and the employees will be through earlier in the afternoon. Some relief in the shortage of bank help was expected from the merger of the Bank of British North America and the Bank of Montreal, and that of the Northern Crown Bank with the Royal. This, however, has been offset by the still further application of the Military Service Act.

QUEBEC'S FOREST REVENUE

Since 1867, the date of Confederation, the government of the province of Quebec has derived a total revenue from its forests of more than $42,000,000. During the year ended June 30th, 1917, the revenue from this source was $1,568,157, of which $347,505 was from ground rent and $1,115,892 from stumpage dues. The greatest total forest revenue was during 1914-1915, when the amount collected was $1,736,605. These revenues form an important item in the support of the civil government.

UNITED STATES ARMY APPROPRIATIONS

The statement was made on the 3rd instant by Secretary of War Baker, that the total of army appropriations submitted to Congress for the fiscal year 1918 was approximately $15,000,000,000. This does not include amounts carried in the separate fortifications bill, covering the cost of defences, heavy ordnance, etc. The secretary also mentioned the fact that the aeroplane programme had not met expectations, the government having been over confident, and the contractors having been unable to fulfil their contracts with the required speed.

TEMISKAMING MILL CLOSED

The mill of the Temiskaming mine was closed on May 9th. It is proposed to continue aggressive development and exploration work underground. While there is considerable low-grade ore at the Temiskaming available for treatment the amount is not sufficient to keep the mill running at full capacity. The cost of operating the mill at half capacity has been found to be not far under what it costs to run at full capacity. The management, therefore, considers it best to curtail mill operations until such a time when sufficient ore will be accumulated to keep the mill up to capacity. Indeed, by running the mill at full capacity for six months of the year as it is figured, will result in a greater profit than if run at half capacity for the full year.

According to official advice, the underground work will be hurried on, and advantage thus taken of the opportunity to direct all energy in prosecuting this one branch of the work.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first week in May:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
May 7	$3,065,000	$3,033,000	—$ 32,000

Grand Trunk Railway.

May 7	$1,135,091	$1,434,727	+ $299,636

Canadian Northern Railway.

May 7	$ 734,500	$ 827,500	+ $ 93,000

In Toronto, in 1916, 766,329 pounds of butter-fat were sold and consumed as cream. In addition, 778,479 pounds of butter-fat were made up in the form of ice-cream, or a total of 1,544,808 pounds of butter-fat utilized in these ways.

DIVIDENDS AND NOTICES

Shaw Correspondence School, Toronto.

WANTED: BOND SALESMAN.—One with experience in selling bonds and debentures; good salary to right man. Apply Box 181, *The Monetary Times*, Toronto.

WANTED.—For office of a General Insurance Agency, young man with Fire Insurance experience. Excellent opportunity for advancement. Apply, stating experience and salary expected to Box 177, *The Monetary Times*, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

Canada imports annually, canned sardines valued at over $100,000. The major portion of these imports are from the United States, Norway, the United Kingdom and Portugal, in the order named. Oddly enough, only 20 per cent. of the New Brunswick catch is canned in this country. The remaining 80 per cent. is shipped to Maine to be canned by American canners. The Canada Food Board is at present taking active steps to have these fish canned in Canada. If this is done it will be, obviously, a distinct advantage to Canadian consumers.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Hamilton Street Railway Company.—The company's receipts for the first three months of the year were $204,157.38. Eight per cent. of this netted the city $16,332.59, and mileage was $1,879.96. In the same period of 1917, the receipts were $186,689.45, the city's 8 per cent. was $15,735.15, and mileage 1,879.96.

Northern Ontario Light and Power Company.—The company's gross earnings for the first quarter of 1918 were $230,212, an increase of $10,372 over the corresponding quarter of 1917. Net earnings amounted to $171,458, compared with $169,444 for the same period of the year before. Surplus for the quarter was $102,868.

Canadian General Electric Company, Limited.—A new high record for the company in 1918 is promised by the reports of the company's progress thus far. Current orders are running at the rate of $240,000,000 for year, as against $234,000,000 for the corresponding period last year. The balance available for outstanding capital stock from 1917 was $26.50 per share.

Demerara Electric Company.—Earnings for March, 1918, were as follows:—

	Gross.	Net.
Railroad	$ 6,306.28	$ 17.79
Light and power	8,040.03	3,843.36
Miscellaneous	....	124.48
	$14,346.31	$3,985.63

National Transcontinental Railway.—The actual earnings of the railway, now a part of the government system, for the 11 months ended February 28th, amounted to $6,923,627, according to a return presented to parliament on May 13th in response to a motion by Mayor Lavigeur, of Quebec City.

The earnings of the section of the railway between Moncton and Quebec were $1,538,764; between Quebec and Winnipeg $4,226,018; and between Lake Superior Junction and Fort William $1,158,844.

Curtiss Aeroplane and Motors Corporation.—The expansion of business by the corporation is most astonishing. Early in 1917 the company was doing a business of around $600,000 a month; now it is shipping at the rate of $5,000,000 a month. The total sales of the company, which is said to have government contracts aggregating $150,000,000, for the year 1917 were $19,826,772. The cost of the goods sold aggregated $15,102,210, so that gross profits from sales were $4,724,561. Net income after charges for administrative and general expenses, interest deductions, taxes and other charges amounted to $2,426,996. The profit and loss surplus, after the payment of dividends, was $945,973.

Minneapolis, St. Paul and Sault Ste. Marie.—The following is a statement of revenue and expenses of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company for March, 1918:—

Main Line:	
Total operating revenue	$1,464,348.91
Total expenses and taxes	1,292,600.90
Operating income	$ 171,748.01
Chicago Division:	
Total operating revenue	$1,049,432.57
Total expenses and taxes	884,319.54
Operating income	$ 165,113.03

Twin City Rapid Transit Company.—The earnings of the company for the month of March, 1918, compared with March, 1917, were as follows:—

	Month of March, 1918.	1917.		Inc. or dec. %
Gross revenues	$835,293	$916,605	—	08.87
Operating expenses	614,391	610,439	+	06.47
Net revenue	220,902	306,166	—	27.85
Fixed charges and taxes	160,695	150,093	+	07.06
Net income	60,206	156,072	—	61.42

For the first three months of 1917 and 1918 they are as follows:—

	Year to date. Three months, 1918.	1917.		Inc. or dec. %
Gross revenues	$2,457,390	$2,641,912	—	00.98
Operating expenses	1,881,090	1,799,459	+	04.54
Net revenue	576,300	842,453	—	31.59
Fixed charges and taxes .	466,130	435,068	+	07.14
Net income	110,170	407,384	—	72.96

Havana Electric Railway, Light and Power Company.—The annual report of the company for the year ended December 31st, 1917, indicates a successful year's business. Gross receipts from each of the departments show a gain, the total being almost $1,000,000 more than for last year. The following is a statement of earnings:—

	1917.	1916.
Gross earnings	$6,989,599.33	$6,017,708.59
Operating expenses and taxes ..	3,385,469.83	2,443,885.33
Net income	$3,604,129.50	$3,573,823.26
Miscellaneous income	149,754.70	144,561.49
Total net income	$3,753,884.20	$3,718,384.75
First charges	1,138,623.30	1,297,093.23
Net profit	$2,615,260.90	$2,421,291.52

After deductions for depreciation, interest, dividends and sinking funds, there remained $2,270,290.19 at the credit of profit and loss account, an increase of over $200,000, as compared with last year.

SURTAX ON REALTY IN MONTREAL

On Friday, the 10th instant, the city council of Montreal adopted a recommendation from the administrative commission that a tax of 45 cents per hundred dollars of valuation be imposed on real estate. This will be in addition to the regular tax. It is expected by this means to improve the financial position of the city.

MONTREAL BOND DEALERS WILL OPEN NEW BRANCH

Messrs. Versailles, Vidricaire and Baulais, Limited, the well-known dealers in municipal bonds, of St. James Street, Montreal, will open a branch office in Quebec in the early part of next week.

The large number of Quebec customers of this firm, together with their expanding business, in the east and west, has influenced them in getting closer to their people by this extension of business.

UNITED KINGDOM LIQUOR TRADE

British parliamentary committees appointed to investigate the purchase and control of liquor traffic by the state have reported in favor of the scheme. The cost is estimated at between £400,000,000 and £500,000,000. The inclusion of wholesalers in the plan is also favored in some quarters. General opinion, however, is in favor of excluding allied trades, such as the major portion of the hotels, clubs, railroad refreshment rooms, theatre bars, etc.

COBALT ORE SHIPMENTS

The shipments of ore, in pounds, from Cobalt Station for the week ending May 11th, were as follows:—

Penn-Canadian, 60,923; O'Brien, 58,871; Aladdin-Cobalt, 84,900; Hudson Bay, 63,406; National Mines, 44,080; Kerr Lake, 60,254; Nipissing, 248,620; Buffalo, 175,850; Coniagas, 153,670; total, 1,050,574.

The total shipments since January 1st now amount to 8,708,302.8 pounds, or 4,354.1 tons.

The Cost of Smoking

Do you know that the cost of your two or three cigars—say a quarter a day---will maintain about $4,000 of life assurance for a man between 25 and 30?

You can afford to smoke, sure! But you can also afford an Imperial Life Policy to provide for your wife and little ones should death call you suddenly. For particulars write to

THE IMPERIAL LIFE
Assurance Company of Canada
HEAD OFFICE - TORONTO

PRELIMINARY STATEMENT OF THE TRADE OF CANADA FOR MARCH

Aggregate Trade.						
Merchandise	151,614,753	228,860,897	190,974,674	1,287,083,431	2,024,542,003	2,548,691,636
Coin and bullion	723,657	1,861,877	762,658	137,832,634	224,628 168	15,770,576
Total trade	152,338,410	230,723,774	191,737,332	1,424,918,065	2,249,170,171	2,564 462,215

*Note.—It will be noted that the figures relating to the imports and exports of coin and bullion for the twelve months ending Mar., 9117, were: imports 1916, $34,260,202; 1917, $28,081,120; 1918, $12,279,173; and exports 1916, $103,572,432; 1917, $196,547,048; 1918, $3,491,403. Although it has been customary to include these figures in trade returns, the total trade figures are seriously disturbed by them in this instance and they should not be taken as an indication of the trade of Canada

Statistics relating to Dominion Savings Banks, Post Office Savings Banks, National Debt, Building Permits Compared, Index Numbers of Commodities, Trade of Canada by Countries, and Preliminary Monthly Statement of Canada's Trade appear once a month as issued by the various Government departments.

FIRE INSURANCE FOR 1917

A statement of fire insurance business in Canada for the year 1917 appears on another page in this issue. The report shows a substantial increase over the business of the previous year. The amount of net cash premiums received was $31,269,677 as compared with $27,783,852 in 1916. The losses on the other hand, increased by only $1,100,000, which is a very creditable showing. The gross amount at risk is now over $4,000,000,000, over half of which is in the hands of British and Colonial companies. United States companies have over $1,000,000,000 and Canadian companies have almost $700,000,000. There is a substantial increase in the business of all three. The Canadian companies, however, show an actual decrease in the amount of losses incurred during the year, while the losses of the other two groups increased considerably.

*TOTAL TRADE OF CANADA BY MONTHS.

DEBENTURES FOR SALE

$3,000,000

PROVINCE OF ONTARIO.

10-YEAR 6 PER CENT. GOLD BONDS.

Sealed tenders endorsed, "Tenders for Province of Ontario Bonds," addressed to the undersigned, will be received for the purchase of $3,000,000 (Three Million Dollars) ten-year Gold Bonds of the above Province, dated 15th May, 1918, due 15th May, 1928, bearing interest at the rate of six per centum per annum, payable half-yearly on 15th May and 15th November. Principal and interest payable in gold at the office of the Treasurer of Ontario, Toronto, or at the Bank of Montreal, Montreal, Canada, or at the Agency of the Bank of Montreal in the City of New York, U.S.A., at the option of the holder.

Bonds to be in the denominations of $100, $500 and $1,000, respectively, as follows: 2,500 of $100 each; 1,000 of $500 each; and 2,250 of $1,000 each, with coupons attached, and may be registered as to principal.

Payment for bonds with accrued interest to date of payment to be made at the office of the Treasurer of Ontario at the Parliament Buildings, Toronto, as follows: 1st payment, $1,500,000 on the 28th May, 1918; balance on the 10th June, 1918. Interim certificates will be supplied on payment of the money, to be exchanged for the definitive bonds on completion by the engravers.

Tenders to be addressed to the Hon. T. W. McGarry, Treasurer of Ontario, Parliament Buildings, Toronto, and delivered not later than noon on Monday, the 20th day of May, 1918.

Tenders must be for the whole amount offered and must be accompanied by marked cheque for $100,000, to be applied in the case of the successful tenderer on the last payment for bonds.

The highest or any bid not necessarily accepted.

T. W. McGARRY,
Treasurer of Ontario.

Toronto, May 14, 1918.

DEBENTURES

Marked tenders will be received by the undersigned up to noon, Friday, May 24th, for seven thousand dollars ($7,000.00) debentures, payable in twenty-five equal annual instalments, bearing 6% interest, to buy a site and build and equip a two-room school in S.S. No. 8, Fitzroy Township.

The Secret of a Wonderful Success

The rise and progress of The Mutual Life of Canada has been one of the romances in the history of Canadian Finance. Less than half-a-century ago a small group of men in an obscure Ontario town determined to establish a Life Insurance Company that would give the public the maximum of service at a minimum of cost. That being the aim it was resolved that the organization should be purely mutual. Five hundred prospective policyholders were gathered and formed the nucleus of the Company. From this small beginning in 1870 the Company has gone forward steadily with more regard to security and mutual serviceableness than big business. The result is that the Company to-day is enjoying a popularity that is phenomenal, writing during the past year more than $20,000,000 paid for assurances.

The Mutual Life Assurance Co. of Canada

Assets **$32,165,000** Surplus **$4,761,299** Assurance **$123,511,314**

AS GOOD AS THE WHEAT

Over 65,000 persons in Canada have arrived at the conclusion that the GREAT-WEST LIFE can give them the best possible value in Life Insurance—a "No. 1 Hard Policy."

Not through lavish advertisement, or the lapse of many years, has the Company attained its reputation, but solely through the attractiveness of its Policies.

Over $155,000,000 of business in force is the record for twenty-five years.

As the standard of profitable Life Insurance, GREAT-WEST POLICIES are well said to be "as good as the wheat."

Information on request.

GOVERNMENT TO PURCHASE IRON OUTPUT

The Dominion government has decided to offer to purchase all the pig iron production of blast furnaces erected in Canada during the next two years. The price will be governed by the market conditions at the time. The object of this offer is to encourage new steel and iron industries in Canada by assuring the sale of the product. The question of a Federal subsidy for the industry has been under discussion for some time, and a delegation from British Columbia has been waiting on the government with a view to obtaining assistance for the industry in that province.

Trade Opportunities With Brazil

Germany's Trade With Brazil Totalled $10,000,000—The Country Has Been Underestimated Here—Excellent Opportunity for Canadian Export Trade—Brazilian Products Supplementary to Those of Canada—Japan Invades South American Field—Direct Steamship Line Desirable.

INCREASED attention has been drawn to Brazil during the past few months on account of its declaration of war against Germany. While no active part has been taken in the war by the Brazilian government, apart from patrolling part of the Atlantic, it is expected that an expeditionary force will be sent before the end of the present year.

The development of Brazil has long been delayed, and generally speaking, it has not attained the prominence which its smaller but more vigorous neighbor, Argentine, has reached. Brazil includes practically one-half of the total population of South America of about 50,000,000. It is the heart of the South American continent, and touches every other country there, with the single exception of Chile, and it is not a paradox to point out that the latter has frequently been, politically, Brazil's best friend. A Canadian gentleman who has been thirteen years in Brazil, namely, the Rev. J. D. McEwen, stated the other day to *The Monetary Times* that "Brazil is the most stable of that continent of unstable republics." Mr. McEwen also pointed out in connection with the possibilities of increasing trade with Brazil, that the language spoken there was Portuguese, whereas, Spanish is spoken in most of the other South American countries.

Germany formerly had an export trade of $10,000,000 to Brazil. This has, of course, been entirely wiped out. Brazil is accordingly open for the purchase of $10,000,000 of goods annually, and there is no reason whatever why some portion of this trade should not be obtained by Canada. At the present time, quantities of fish are shipped from the Maritime Provinces to Brazil. In fact, on account of being an almost exclusively Roman Catholic country, Brazil is one of the best markets for Canadian and Newfoundland fish. Nova Scotia lumber and fruits are also shipped to some extent. The present shortage of ocean tonnage and high freight rates, however, affect this trade injuriously. It is said that apples imported from Nova Scotia sell freely in Brazil at 15 cents each, and butter from Denmark at $1 per pound. These facts would indicate that if a market is found for products such as these at the prices mentioned, there would be a wide market for Canadian products at the lower price, which reduced freight rates would make possible.

As a field for Canadian trade, Brazil undoubtedly offers the best opportunity in South America. This is not only due to the fact that its population and area is much larger than that of any other country there, but also because Brazilian products do not compete with Canadian products, but supplement them. Brazil is a tropical country, although it does extend southwards within the temperate zone. No wheat nor oats are grown and the cattle and other livestock is of comparatively inferior quality. Argentine, on the other hand, has a climate similar to that of Canada, and produces many identical products. In bulky goods, such as agricultural products, fruits, etc., Argentine no doubt has an advantage over Canada in trading with Brazil, on account of its proximity. There is no reason, however, why Canadian bacon, butter and other products whose value is fairly high in proportion to its bulk, should not compete successfully in Brazil with the produce of any other country. Moreover, with our well-developed manufactures of agricultural implements, etc., some market for manufactures should be found. It was in the field of inferior grades of manufactures that Germany achieved the greatest success in Brazil. There, as in most countries, Britain has retained her prestige in the highest grades of manufactures.

The excellent opportunity afforded has been recognized by many countries and Japan more especially has been vigorous in promoting her interests in South America. Prior to 1914 there were no steamships trading directly between Japan and South America. Now there are three lines. A number of banks in South America has also been planned by Japan, including branches in Bahia, Sao Paulo, Rio Janiero, Para, Pernambuco and Manaos in Brazil. With these arrangements for transportation and finance, Japan will be prepared to promote trade with South America, and apparently methods are to be used very similar to those employed by Germany. When the war ceases, Japan at least will be in a position to compete with Germany.

At the present time a line of ships plying direct from Canada to South America will not obtain sufficient business to pay, and in view of the extreme shortage of ocean tonnage, would be decidedly an extravagance. The Dominion government, moreover, is in no financial position to enter upon a speculative venture of this kind. It is worth bearing in mind, however, that the opportunity does exist, and should be taken advantage of so far as Canadian conditions and the defective transportation system permit.

It may be remarked that agricultural implements and pure-bred stock for breeding purposes are admitted into Brazil free of duty. Agriculture there is in an extremely backward condition. The principal agricultural implement is a large hoe which is used for cultivating the ground.

Brazil is the principal coffee-producing country of the world and this is its principal export. Two-thirds of the world's supply is produced here and it has been estimated that a total of £100,000,000 is invested in the industry. Coffee has found a steady and increasing market, and although there was a considerable overproduction in 1906, the surplus from that year has been gradually disposed of. Brazil also produces cane sugar, cocoa, cotton, fruits and nuts. One of its important products is timber, the market for which, however, has been affected by war conditions. The timber produced varies in specific gravity from .750 to 1.310; that is, some kinds are much heavier than water. The timber resources of Brazil are being gradually used up, and it is said that the climate in some places is on this account becoming much drier and droughts have even been experienced where they were not incurred before. Another important product is rubber, which comes from the valley of the Amazon. The Brazilian rubber, collected from trees of natural growth, is reputed to be the best in the world, although the plantation product has recently been competing with it in all but the very best grades.

Favorable Towards Trade With Canada.

Apart from the purely economic opportunities for trade with Brazil, the political sentiment of the country is also quite sympathetic towards Canada. The United States has, of course, always been Brazil's best market, but there is a general feeling among the South American republics which would resent any attempt of the United States at economic or political domination. Knowing Canada's position as to this question, they recognize the identity of their interests with ours. Canadian trade efforts would meet in Brazil not only with perfect freedom, but even with active assistance. The fact that the Brazilian Traction Company, which operates the public utilities of cities of Rio Janiero and Sao Paulo, and is the largest public utility corporation in Brazil, is a Canadian company, would appear to be sufficient proof of this. Sir John Aird, who was recently in South America, testified regarding the high standard of South American cities, and the general advancement of business. At the present time the only Canadian trade commissioner in South America is located at Buenos Ayres, Argentine. In other republics, however, the British consular service is placed at our disposal. Canadian trade with Argentine was developed considerably up to 1915, when it totalled $4,599,372 for the nine months ending December 31st, with a substantial balance against us. Since then our imports have fallen to a fraction of their former figure, and the total trade is much less. Trade with Brazil for the same period totalled only $1,387,296, with a balance in our favor; on the other hand, our imports from Brazil have increased since 1915, and the balance is now against us. This would point to the fact that exchange, and the necessity for return cargoes if a direct line of steamships were established, would have the effect of promoting Canadian exports to Brazil. We also owe a substantial annual balance to Peru, and some of the other republics. The United States trade with Brazil, which has increased enormously since 1914, is also heavily in favor of Brazil. A good portion of Germany's export trade has, however, been obtained by the United States, and the foreign banking business is now almost exclusively in the hands of British and United States firms; formerly, on account of the Brazilian export of coffee being centered in Hamburg, much financial business was handled by German banks through their agents and representatives in Brazil. At present there is no Canadian bank in Brazil, and trade would undoubtedly be facilitated by the establishment of a branch there. The advantage of using Canadian exchange, instead of having to forward funds through American or British houses, could not fail to appeal to the Brazilian importer.

NOVA SCOTIA FOREST FIRES

Thousands of acres of timber land and a number of houses have been destroyed by forest fires during the past week. A blaze starting about twenty miles south of Windsor, N.S., made a clean sweep of the road, destroying a mill and the houses in that section. The fire then left the road, crossing the Avon River at a narrow spot, and swept on towards Upper Falmouth. The damage in Hants county is estimated at well over $200,000.

The Anglican Church and Hall at Queensport were destroyed in one of the many forest fires raging in Guysboro' county. At Giant's Lake two houses were burned to the ground, and at Halford, on the north shore of Chebucto Bay, one residence was destroyed. On the south shore of the bay a number of barns were destroyed.

STERLING BANK OF CANADA

The annual report of the Sterling Bank of Canada, for the fiscal year ending April 30th, 1918, shows total assets of $16,108,000, or an increase of almost two and one half million for the year. Deposits are now $12,975,000, as compared with $10,666,000 for the year ended 30th April, 1917.

The bank's profits were $186,120, or over 15 per cent. on the paid-up capital. This compares with 13.3 per cent. in 1917, 12 per cent. in 1916, 9.6 per cent. in 1915, and 1914. The sum of $63,000 was carried to contingent account and $40,000 to the credit of profit and loss. Dividends at the rate of 6 per cent. per annum were paid during the year. The bank's deposits have more than doubled during the past five years, and assets have almost doubled. Further details concerning the report will be given next week.

COBALT ORE SHIPMENTS

The shipments of ore, in pounds, from Cobalt Station for the week ended May 17th, 1918, are as follow:—

La Rose Mining Company, 92,637; Aladdin Cobalt Mine, 66,000; McKinley-Darragh-Savage Mine, 168,970; Dominion Reduction Company, 173,000; Mining Corporation of Canada, 195,961. Total, 696,568.

The total shipments since January 1st now amount to 9,404,870.8 pounds, or 4,702.3 tons.

IMPERIAL BANK OF CANADA

The Imperial Bank held its annual meeting in Toronto on Wednesday, the 22nd instant. The bank's total assets are now over $100,000,000, and deposits amount to $75,394,652.66. The amount of notes in circulation is now almost $10,000,000. The bank holds government and municipal securities totalling almost $20,000,000.

The balance at the credit of profit and loss on the 30th April, 1917, was $1,164,876.20, and the profits for the year were $1,185,066.71, so that a total of $2,349,942.91 was available for distribution. Dividends amounting to $840,000, being at the rate of 12 per cent., were paid during the year; patriotic contribution totalled $27,500; $7,500 was contributed to the officers' pension and guarantee funds; $70,000 was set aside for the Dominion government war tax on bank circulation, and $200,000 to cover possible depreciation in bonds and debentures. The balance carried to the credit of profit and loss was $1,204,942.91, or somewhat more than last year. The statement will be given in full next week.

FOOD COMMODITIES IN CANADA

Amount in Storage—Owned by Firms—Imports Including Foreign Production

A statement has been compiled by the Dominion government showing the amount of food commodities in storage April 1st, 1918, as follows:—

	Pounds.
Butter	2,804,201
Cheese	4,266,207
Eggs (dozen)	276,898
Beef (fresh and pickled)	30,285,941
Pork (fresh and pickled)	25,335,862
Bacon, ham and smoked meats	13,328,750
Mutton and lamb	2,953,231
Fish (all varieties)	14,721,956
Fowl (all varieties)	2,090,038

The preceding figures cover only goods reported as held in storage. To estimate the quantity of any of such commodities available from cold storage companies for consumption and export, add about 10 per cent. to represent goods in transit and certain comparatively insignificant quantities unreported.

Firms' Holdings.

Goods owned by firms reporting April 1st, 1918, who also have reported April 1st, 1917, show the following comparisons:—

	Apr. 1, '17. Pounds.	Apr. 1, '18. Pounds.	Inc. or dec.
Butter	1,844,206	1,911,287	+ 3,64%
Cheese	1,706,080	2,800,988	+64.17%
Eggs (dozen)	162,509	201,581	+24.04%
Beef (fresh and pickled)	13,542,915	25,236,265	+86.34%
Pork (fresh and pickled)	30,859,373	24,609,281	—20.26%
Bacon, ham & smoked meats	14,733,632	11,359,019	—22.91%
Mutton and lamb	3,203,548	2,253,703	—29.65%
Fish (all varieties)	9,668,637	10,079,718	+ 4.25%
Fowl (all varieties)	3,087,096	1,327,530	—56.99%

Comparisons of Holdings.

The comparisons of holdings of March 1st, 1918, with April 1st, 1918, are as follows:—

Commodity.	March 1. Pounds.	April 1. Pounds.	Increase or decrease.
Butter	4,300,131	2,804,201	—34.79%
Cheese	5,386,612	4,266,207	—27.53%
Eggs (dozen)	260,141	276,898	+ 6,44%
Beef	29,984,111	30,285,941	+ 1. %
Pork	19,895,869	25,335,862	+27.34%
Ham, bacon & smoked meats	13,624,121	13,328,750	+ .58%
Mutton and lamb	3,839,235	2,933,231	—23.6 %
Fish (all varieties)	13,946,408	14,721,956	+ 5.54%
Fowl (all varieties)	2,492,100	2,090,038	—16.14%

Imports and Exports.

The imports of the same commodities (including foreign as well as Canadian production) for March, 1917 and 1918, respectively, were:—

	March, 1917. Pounds.	March, 1918. Pounds.
Butter	25,065	46,762
Cheese	44,222	32,977
Eggs (dozen)	1,504,512	1,309,623
Beef	1,688,986	422,414
Bacon and ham	1,555,102	3,023
Pork	13,296,542	2,306,834
Mutton	212,146	581,821

The exports of the same commodities for March, 1917, and 1918 were:—

	March, 1917. Pounds.	March, 1918. Pounds.
Butter	80,115	204,308
Cheese	3,885,222	539,162
Eggs (dozen)	174,210	5,892
Beef	10,776,520	5,684,377
Bacon and ham	33,400,965	15,232,048
Pork	2,207,573	184,197
Mutton	15,779	12,521

Commodities In Store.

The following statement shows the distribution of the total quantities of each of the mentioned commodities in store April 1st, 1918, reported according to established districts:—

	Maritime provinces. Pounds.	Quebec. Pounds.	Ontario, minus Toronto. Pounds.	Toronto. Pounds.
Butter	117,422	657,170	103,584	845,408
Cheese	134,678	1,238,999	1,005,564	1,138,535
Eggs (dozen)	2,811	91,650	30,979	64,783
Beef (fresh)	2,622,762	3,619,705	625,476	9,838,980
Beef (pickled)	100,800	85,802	36,237	260,197
Pork (fresh)	59,073	393,157	2,140,375	1,880,761
Pork (pickled)	234,745	737,604	396,191	6,032,219
Bacon and ham	565,027	2,529,794	2,537,169	7,073,542
Mutton and lamb	339,013	673,192	77,562	839,512
Fish (all varieties)	2,387,271	772,726	421,209	828,479
Fowl (all varieties)	79,966	522,510	490,525	450,557

	Manitoba. Pounds.	Alberta and Saskatchewan. Pounds.	British Columbia. Pounds.
Butter	182,855	366,293	450,499
Cheese	175,963	430,383	142,095
Eggs (dozen)	14,903	35,449	48,424
Beef (fresh)	4,461,241	6,916,089	1,499,889
Beef (pickled)	2,655	4,622	11,486
Pork (fresh)	1,635,715	2,311,349	439,811
Pork (pickled)	2,430,777	5,954,458	689,632
Bacon and ham	316,029	226,942	80,247
Mutton and lamb	486,068	363,544	134,400
Fish (all varieties)	1,279,986	613,980	8,218,305
Fowl (all varieties)	161,979	216,468	148,033

NEW CANADIAN FINANCIAL HOUSE

A firm has been organized in Montreal under the name of Aldred and Company, Limited, to act as investment bankers and as fiscal agents for various companies in Canada and elsewhere. The firm will be affiliated with Messrs. Aldred and Company, of New York and Paris, which has been identified with several large corporations both in the United States and Canada. The Canadian firm is being organized to attend to their special interests in this country. It is understood, however, that they will not engage in business which properly lies within the field of the chartered banks or stock exchange firms. The head office of the company is to be in Montreal, and the officers and directors are as follows: President, J. E. Aldred; vice-president and treasurer, Howard Murray, who is vice-president of the Shawinigan Water and Power Company and recently engaged in connection with the work of the Imperial Munitions Board at Ottawa; secretary, H. Geoffrion; directors, J. E. Aldred, Howard Murray, Sir Herbert S. Holt, H. J. Fuller and Mr. M. Otis.

ROYAL EXCHANGE ASSURANCE

The annual report of the Royal Exchange Assurance for the year ended December 31st, 1917, has been made public. This company transacts fire, life, marine and general accident insurance. In spite of unusual losses in the life and marine departments, on account of the war, the annual report makes an excellent showing. From the life department, the total premium income was £397,704, and the claims paid amounted to £261,727. The life assurance fund now amounts to £3,909,108. The company also sells immediate and deferred annuities, 67 of which were issued during the year. The net premiums for the year from the fire department amounted to £1,117,887, being an increase over 1916 of £112,694. The losses were £570,770. From the marine department the net premiums amounted to £1,700,400 and the losses £1,374,610. The general accident department also showed good results. The total assets of the company now amount to over £9,000,000. Dividends totalling 12 per cent. were paid during the year on the capital stock.

The Russell Motor Company, Limited, has issued a handsome booklet describing the company's various plants, and the different operations in the manufacture of munitions of war.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Duluth Superior Traction Company.—The company's earnings for the second week of May were $31,543, as compared with $27,910 for the same seven days in 1917. The increase amounted to $3,632, or 13 per cent. Earnings for the year to date are $617,401, as compared with $564,388 in 1917. The advance was $53,013, or 9.4 per cent.

Northern Ohio Traction and Light Company.—The company's report for the 12 months ended March 31st, 1918, shows gross earnings of $6,599,130, compared with $5,543,778, an increase of $1,015,351 over the corresponding months of the preceding year. Net after taxes amounted to $2,367,191, against $2,500,364 for the 12 months ended March, 1917. Surplus after charges for the period totalled $1,353,684, a decrease of $232,126 from the same period of the previous year.

Porto Rico Railways Company, Limited.—The following is a comparative statement of earnings of the company for April, 1918, and for the four months ending April, 1918:—

	1917.	1918.	Increase.
For April.			
Gross	$ 76,057.77	$ 86,677.35	$10,619.58
Net	25,455.30	37,480.71	12,025.41
For four months.			
Gross	292,861.36	335,124.83	42,263.47
Net	125,753.49	151,424.37	25,670.88

North American Pulp and Paper Company.—A surplus of $105,165 for the year ended December 31st, 1917, as against a deficit of $309,360 for the year previous, is the showing made by the company and its subsidiaries, according to the annual report of the concern, which has just been issued. Factors contributing to the report are a decrease of $524,000 in operating expenses and an increase of $421,137 in the item "other income."

The gross operating revenue for 1917 was $3,528,451, or $434,659 less than in 1916, while the operating expenses were $2,839,097, a drop of $524,000. Total income of $1,318,740 in 1917 compared very favorably with $808,262 the previous year, while the surplus recorded for the twelve months just reported was $105,165 in comparison with a deficit of $309,360, same period a year previous. Minority stockholders' interests' proportion of profits in controlled companies in 1917 were $59,563, while in the year 1916 they were but $3,052, making a final balance of $45,602 for the year just ended, as compared with a final deficit of $312,412 in 1916.

Illinois Traction Company.—The annual report of the Illinois Traction Company for the year ending 31st of December, 1917, has just been issued. The earnings and expenses were as follows:—

Total gross earnings	$14,040,870.35
Total operating expenses, including taxes	9,149,176.26
Net from operation	$ 4,891,694.09
Interest on bonds, etc.	3,082,121.33
	$ 1,809,572.76
Less: Depreciation for 1917	650,704.25
	$ 1,158,868.51
Less: Bond Discount for 1917	82,140.10
Surplus, 1917	$ 1,076,728.41

Each department showed an increase in gross earnings. These earnings were, however, more than offset by the increases in operating expenses and taxes. The additional cost of steam coal was over $450,000, of labor over $316,000, of taxes over $285,000. The net earnings were accordingly decreasing and it became apparent that an increase in rates would be necessary. This was made effective on the Inter-Urban Lines, and an effort is being made to substitute the meter system under steam heating, for the system of flat rates now in force.

Considerable property was acquired during the year, and the total assets now are over $26,000,000.

PERSONAL NOTES

MR. LEON J. BALCER, manager of the Hochelaga Bank in Three Rivers, died suddenly on May 19th at Lake Masketsy, heart disease being the cause.

SIR EDMUND OSLER was elected to the board of directors of the Imperial Oil Company at their meeting on May 18th. He succeeds the late Mr. T. H. Smallman.

MR. J. W. ALEXANDER, for three years branch secretary of the Canada Life in Vancouver, has been appointed provincial manager for British Columbia of the Western Empire Life.

MR. M. E. MANNING, who has been with the Mutual Life Assurance Company for ten years, has been appointed city manager for Toronto, of the Crown Life Insurance Company.

MR. W. H. MARTIN, who has been in charge of the United States loss department of the British-America Assurance Company, of Toronto, Canada, for several years, has been appointed assistant secretary by the directors of the company. Mr. Martin is also in charge of the United States loss department of the "Western," of Toronto.

MR. P. C. BANKS, of Calgary, has been appointed western inspector of the Pacific Coast Fire Insurance Company, of Vancouver, the Century Insurance Company, Limited and the Vulcan Fire Insurance Company, of Oakland, California. The latter two also have their Canadian headquarters in Vancouver. Mr. T. W. Greer is manager for all three.

MR. G. E. RODWELL, who has been for several years resident manager in Calgary for the General Accident Assurance Company of Canada, has been appointed manager of the company's branch office in Vancouver. Mr. Rodwell has taken offices in the Yorkshire Building. The J. O. Miller Insurance Agencies, Limited, have taken over the provincial managership for Alberta.

MR. VICTOR ROSS, who has been connected with the Toronto "Globe" for 21 years, and who has been financial editor for the past nine years, has been appointed assistant to the president of the Standard Oil Company, of New Jersey. The company has adopted a plan of having the employees elect their own representative to treat on question of wages, discipline, hours, etc., with the directors. In addition to his work on the "Globe," Mr. Ross has been contributing editor to the Canadian Bankers' "Journal."

BANK OF MONTREAL BUSINESS

The half-yearly statement of the Bank of Montreal for the six months ending April 30th, 1918, indicates another period of successful business. The assets now total $426,322,996 as compared with $386,806,887 on the 30th of April last year. This is a record level for Canadian Banks. The call and short loans in Great Britain and the United States, and balances due from banks and banking correspondents elsewhere than in Canada, have been reduced considerably, while holdings of Canadian municipal securities and of British, foreign, and colonial public securities other than Canadian, have increased largely. The deposits in the central gold reserves, now stands $13,500,000 compared with $7,000,000 formerly. The large business the company handled is reflected by total current loans of over $109,000,000 as compared with slightly over $98,000,000 a year ago, and loans to cities, towns, and municipalities have advanced from $11,380,184 to $18,136,406.

In spite of the fact that many millions have been withdrawn from deposits, by subscribers to the Victory loan, a net gain of over $33,000,000 is shown.

The profits for the six months are more than for the corresponding period last year, and the total available for distribution in the profit and loss account was $2,952.479. This was distributed as follows: Dividends and bonuses at the regular rates, $960,000; war tax and bank note circulation, $80,000.000; subscription to patriotic funds, $27,500; provision for bank premises, $100,000. The amount to be carried forward is $1,784,979 as compared with $1,557,034 a year ago.

LIFE INSURANCE AND THE WAR

Mr. John M. Holcombe, president of the Phœnix Mutual Life Insurance Company, contributes an interesting paper to a recent number of the "Economic World," of New York, on the increased importance of life insurance since the outbreak of war. Mr. Holcombe rightly lays emphasis upon the fact that human life is everything, and natural resources nothing in comparison, in the real greatness of a nation. And yet, to the discredit of modern civilization, stress has been placed oftener than not upon wealth rather than upon human welfare.

The life insurance company places the value of human life in the very forefront of its programme. It does so because its success depends upon estimated mortality; and because financial resources making for the widening of the scope of its activities can be accumulated by lengthening the span of life. The directors of insurance organizations give emphasis, therefore, to the social benefits derived from proper housing, community parks and recreation grounds; and decent standards of living in general. Indeed, insurance men were the first to appreciate and further a programme for raising social and economic standards, realizing that a high standard of living means at one and the same time both national well-being as well as individual efficiency. A stagnant, poverty-stricken community has never yet accomplished anything for itself or for the nation at large.

It is for these reasons that insurance companies are so greatly concerned with future conditions, both economic and social. For one thing, their permanent prosperity depends upon the securing of new members from the generation just appearing upon the stage of life. And the soundness and security of their investments in the immediate future are matters of scarcely less importance. It should be abundantly clear, therefore, why life insurance directors are so deeply interested in making "the world safe for democracy." In no other kind of world can life insurance or any other business enterprise flourish.

One need not go very far beneath the surface of things to find that prosperity is based upon political and social justice. Business does not flourish in Turkey, Persia and Afghanistan. Life, liberty and property have no adequate guarantees under autocratic, government or under the reign of tyranny. There is sound common sense as well as psychological value in the appeal: Lend your money to your country, or pay tribute to the Kaiser!

As is well known, the United States government has placed over $12,000,000,000 of insurance upon the lives of its soldiers and sailors. Mr. Holcombe draws attention to the fact that the premiums paid will scarcely make good the losses sustained, simply because it has proved impossible to work out a dependable mortality table for the modern battle. In last analysis, part of this insurance must be made good from taxation; and the scheme, therefore, will differ in no essential detail from the pension programme of Canada and the other nations. It would be a sheer impossibility, of course, for any mutual or stock insurance company to carry war risks at ordinary rates without jeopardizing the interests of the average policyholder. It is doubtful whether even the payment of a special premium makes it advisable for the ordinary insurance company to carry war risks.

It is along other lines that Canadian and United States insurance companies can best support the government and the nation during these difficult times. Insurance officers and agents, because of their wide experience, have been able to render invaluable help to the nation in raising war loans and in promoting every sort of patriotic activity. In addition to all this, an army of agents are strenuously teaching the duty of thrift, day by day, and inculcating the lesson that economy and the elimination of waste make as much for economic progress and national self-sufficiency as business enterprise. Moreover, the insurance companies, by accumulating a vast reservoir of capital, have helped to sustain the industry, commerce and agriculture of the nation. The small, and relatively insignificant, premium paid by the individual amounts to a tremendous total in the aggregate. Here and now, in innumerable ways, and by fresh methods and devices, the insurance companies, through their agents, are preparing the nation to face the hard task that will confront it at the conclusion of hostilities.

The stimulation of patriotism, the emphasizing of the value of thrift, the fertilizing of industry and agriculture, the subscribing of huge sums to finance the war, are the main methods by which the insurance companies have "done their bit." Let this be kept in mind when the farmer and the laborer glance askance at the life insurance agent and feel inclined to sneer, "Non-producer."

TRADE IN EAST AND WEST

Winnipeg, the leading western clearing centre, has latterly been reporting large weekly decreases as compared with 1917, while the leading eastern centres have held their ground or shown increases. At the same time, the Grand Trunk Railway with its connections in the manufacturing east, during the first half of May shows a continuation of heavy increases in gross receipts while Canadian Pacific, the system of which is mostly in the western provinces, in May this year barely succeeded in equalling its record for the first half of the month in 1917. It was expected that the rate increase would enable the railways to substantially increase their gross receipts. So, it is clear that if the old freight and passenger rates had remained in force, Canadian Pacific at least would now be showing substantial decreases. In other words, there is some falling off in volume of western railway traffic; and the evidence of temporary recession of business activity is also seen in the story of the bank clearings.

This, however, is not taken as indicating an unfavorable situation, as it is clearly understood that the drop in clearings and railway traffic is chiefly due to the clean-up of the grain crop. The state of affairs in the grain trade makes a sharp contrast with the situation of two years ago. Then, owing to the great dimensions of the 1915 wheat crop of the prairie provinces, the railways were rushed to capacity through the spring and summer of 1916, right up to August when the new crop came in; while Winnipeg bank clearings were breaking previous records. Since then, the West has had two years of comparatively light harvests. Also, there has been urgent need in Great Britain and France of all the wheat Canada could ship. As regards the crop of 1917, its shipment was further expedited by the fixed prices. There was absolutely no object to be gained through deferring the sale or shipment of the grain—everybody was intent upon getting his stuff on the market as soon as possible. Consequently, in May this year, there has not been such a great volume of grain settlements passing through the Winnipeg clearing house, and the train loads of wheat rushing from the prairies to the Lake Superior terminals have not been so numerous.

Last week's heavy general rains and the excellent growing weather now prevalent in the West have dispelled the slight feelings of nervousness as to the 1918 crop outlook. Then, the general confidence over western prospects is enhanced by remembrance that that part of Canada has a habit of coming forward with a bumper yield in the season following two years of poor crops. A big western crop this year would have a decidedly favorable effect upon the railway traffic reports. The 1915-1916 experiences of the transportation companies would be repeated. Then, so far as the western bank clearings are concerned, the high prices now ruling would perhaps swell the volume of transaction far beyond the records of three years ago. Freight rates being higher, the railways will receive a greater revenue per ton of freight carried than in 1915-16. Also, the higher price of wheat will operate indirectly to swell the railway traffic—since it makes the farmers more prosperous and enables them to buy more general merchandise, which is transported by the railways.

THE TORONTO POSTMASTERSHIP

Further than any proper period that may be requisite out of respect to the honored memory of the late William B. Rogers, postmaster of Toronto, there should be absolutely no delay or hesitation in the appointment of a successor to his position. The Union Government should set at rest the idle rumors regarding the various political favorites who are said to be "slated" for the job, by taking the logical step of promoting William E. Lemon, the present deputy postmaster.

The Union Government has announced its adherence to the principles of promotion. It says that party patronage and petty politics are things of the past. Now there is an outstanding opportunity for the government to prove its sincerity. Mr. Lemon has been in the postal service in Toronto since 1882; there cannot possibly be anybody else so well versed in the requirements of that post office.

Mr. Lemon has been a keen student. He is a man of outstanding ability,—affable, courteous in his relations with the public, prompt in the despatch of business and fully entitled to and deserving of the promotion. His whole business training has been in the Toronto post office, consequently he is well known in that city and public sentiment would be strongly against his being ignored in any appointment that may be made. He joined the staff of the post office as a temporary clerk, but within a year was made clerk in charge of the night staff. After he progressed through the various departments, seeing service in practically every branch, he was impressed with the necessity for better facilities at terminal points, so as to obviate the expense and loss of time involved in carting mail from the Union Station to the General Post Office, there only to sort it and then return to the Union Station large quantities of mail addressed to other cities but which had been first brought to Toronto as the distributing point. Arguments in favor of this innovation so impressed Sir William Mulock, who was then postmaster-general, that "Station A" was organized at the Union Station in 1898, with Mr. Lemon in charge.

This principle of handling mail at railway stations has since greatly grown in favor throughout Canada and also in the United States, and when the new Union Station in Toronto is completed, practically all the sorting of mail that is brought to Toronto will be done at the depot. The post office department is thus utilizing to the limit Mr. Lemon's early ideas upon the subject. Mail that is destined for West Toronto, for instance, will go direct from the Union Station to a branch post office in West Toronto, and the Adelaide Street general post office will become merely a branch for its surrounding business district.

In 1904 Mr. Lemon was appointed office superintendent in charge of the various office staffs throughout Toronto,

62

and in 1907 he became deputy under Postmaster Thos. C. Patteson. In 1908 Mr. Rogers was appointed postmaster, the appointment at that time being admittedly political.

If the principles of promotion be not adhered to in this case, there will be no incentive to young men to enter the postal service. If efficiency and merit do not count in public service, private institutions will always have first call on the best brains of the country. This is especially true considering the inadequate salaries paid in the postal service. The present salary of the postmaster of Toronto is only $4,000 a year, which is certainly low, considering the very great responsibilities involved and the high order of technical work that must be done by someone,—either the postmaster or his deputy. The salaries of postmasters in the United States are very much larger. Mr. Lemon, however, is not the type of man who would value the position so much for the salary attached as for the opportunity that it would give him of rendering public service by placing Toronto second to no other city on the American continent in the accuracy and speed of its postal work.

VICTORY LOAN REMUNERATION

Supplementary Statement of Commissions to Dealers in Other Provinces

A further list of commissions to brokers and bond houses in connection with the last war loan, in addition to that shown in *The Monetary Times* last week, is as follows:—

Alberta.

Hanson, $1,500; R. R Morgan, $750; N. W. Morton, $1,500.

Payments to Banks.

On the 20th inst. a further statement was made regarding the payments to the banks. The statement showed that $984,395 had been paid as follows: Bank of Montreal, $141,043; Bank of Nova Scotia, $57,299; Bank of British North America, $42,900; Bank of Toronto, $44,076; Molsons Bank, $35,260; La Banque Nationale, $17,630; Merchants Bank, $61,706; La Banque Provinciale, $8,815; Union Bank, $44,076; Bank of Commerce, $132,228; Royal Bank, $113,819; Dominion, $52,891; Bank of Hamilton, $26,445; Standard Bank, $30,093; Hochelaga, $35,260; Bank of Ottawa, $35,260; Imperial, $61,706; Home Bank, $17,165; Northern Crown, $12,600; Sterling, $10,715; Weyburn Security, $3,396.

TOWN OF ALLISTON DEBENTURES

The town of Alliston, in the County of Simcoe, has for sale 30-year hydro-electric debentures to the amount of $32,000, bearing interest at the rate of 6½ per cent.

MR. ARTHUR B. WOOD HONORED

At the annual meeting of the Actuarial Society of America, held at the Hotel Astor, New York, upon the sixteenth and seventeenth of May last, Mr. Arthur B. Wood, F.I.A., F.A.S., actuary of the Sun Life Assurance Company of Canada, was elected vice-president of the society. The honor is singularly appropriate and significant at a time when Canada and the United States are being drawn closer together than ever before..

Mr. Wood is an honor graduate in Arts of McGill University, and is a Fellow of the Institute of Actuaries of Great Britain, and a Fellow of the Actuarial Society of America. His successful business career, all of which has been spent with the Sun Life of Canada, has made him not only one of the best known actuaries, but one of the foremost life assurance executives of Canada and the United States.

THE GROWTH OF MONEY AND EXCHANGE

Different Forms of Money — Relative Values of the Different Coins

At a recent meeting of the Pacific Sub-section of the Canadian Bankers' Association a very interesting address was made by Mr. Ewing Buchan, liquidator of the Bank of Vancouver. Mr. Buchan outlined the development of exchange, its relation to the different coinage systems, and described some of its practical operations. Some thirty years ago Mr. Buchan was an exchange broker in Toronto, but later entered the banking business. Mr. Buchan addressed the meeting as follows:—

"It takes us back to very early times, when men began to trade with one another by means of barter. One man traded something he did not want to another man for something he did want, and this trade was naturally confined to localities until means of communication and transportation developed. Articles of considerable weight and bulk, approximately the same value, were to a great extent consumed at the place where they were producd. Flour went to feed those who, by their industry, produced the grain. Wool was spun and woven into cloth, and worn by people in the locality. It was only when gold, silver, precious stones and spices were sought after that transportation encouraged the receipt of these precious articles for the delivery of larger commodities of equal value between countries bordering on the Mediterranean Sea and the Far East. These transactions increased until Western Europe, India, Asia and other places became involved in business of that nature.

Beginning of Money.

"Through the process of evolution, so to speak, men began to look for some simpler means of obtaining value for what they had parted with, and very early in the history of commerce the much-coveted article, the love of which is said to be the 'root of all evil,' came into use, and was accepted as value for commodities disposed of, and, as international trade extended, the money of one country had to be exchanged for that of another, in order that the vendor of goods might receive final payment for the proceeds of his sale at his own domicile.

"The term 'exchange,' as we know it now, means a conversion of the money or currency of one country into that of another.

"The ancient Lydians, of whom Crœsus was the last monarch, were said to have first coined gold and silver for use as money. The Jew, as far back as Abraham, made use of money, for we learn from Holy Writ that the patriarch purchased a field with it, and the acquisition of money is said to be the ambition of the chosen people to this day.

Different Materials Used.

"Money has not, however, been confined to the precious metals, but has been represented by skins, shells and all sorts of things used to denote value, and it was in the time of Queen Elizabeth that money in the form of tokens, or bearing the official stamp of value, was introduced, and these so-called tokens were made of lead, tin, leather and other articles, some of them, perhaps, almost worthless in themselves, but valuable by reason of the official stamp or token. The English penny and other coins of copper, silver and gold were of true weight and value, according to their weight, and to them was applied the word "sterling," which word became in time applicable to all money of the United Kingdom, and has long been a synonym for the currency of Britain, and thus comes the term, 'sterling exchange.'

"The word 'token' was stamped on many of the original coins, and you will see it on Canadian pieces in the old coppers and pennies of the Bank of Montreal, the Bank of Upper Canada and others, which are, perhaps, yet in circulation to some extent, though the word has disappeared from our coins of the present day.

Paper Money.

"Other materials of even less intrinsic value gradually came into use as money when bearing the token of a nation, or a corporation under authority of a nation, though paper in course of time proved to be the most convenient, and today, you gentlemen accept an otherwise worthless piece of paper as money, the equivalent of gold up to the value of even $5,000, when it bears the token of the Dominion of Canada, and your $171,000,000 of bank notes in circulation represent value in the token of the respective banks issuing them under the authority of the government, and with its guarantee, under the provisions of the bank circulation redemption fund, whch insures their payment under all contingencies.

"While speaking of the extent to which paper is now used, as representing money and security, it is worth while to take one of the monthly bank returns, issued and published by the minister of finance, of which each individual bank represented here has its part in preparation, and look over the figures with a view to finding out the actual amount of cash in the way of gold or silver that is used to carry on the enormous amount of business transacted at the present time. You will probably be surprised to find that it is less than 3¾ per cent., which means that you are carrying on business of $2,237,800,000 with $82,440,000 actual cash.

Origin of the Process of Exchange.

"I have said the word 'exchange' means, in its broad sense, the conversion of money of one country to that of another, but I shall have to enlarge my scope, as by the gradual increase of international trade, it became inconvenient and restrictive to commercial operations for an exporter to wait until he received the money for the sale of his goods and have it converted into the currency of his own land.

"In or about the thirteenth century the Jews and Lombards, who had been making large profits by changing the various kinds of money, originated the use of the bill of exchange, whereby the exporter or drawer could make an order on the importer or drawee, for vice versa, for any term of days or months, presumably up to ninety days, or even more, and the Hebrew would, for a consideration, perhaps larger than some of you bankers get at the present time, involving the ramification and risk, advance money on a bill of exchange, and thereby provide the exporter with the means to go on with another transaction of the same kind without having to wait for his goods to arrive at a destination and be paid for. This custom became prevalent throughout all Europe in the fourteenth century, and has extended continually up to the present day, and is, as you gentlemen know, a large factor in the business of the chartered banks, and, no doubt, some of you are occasionally told by a customer that you have not altogether abandoned the precedent of charges established by the Jews.

"Through the medium of the banks and the facilities of transportation and communication by telegraph and mail business of this nature has become almost, shall I say, a science, but is now so common that we cease to marvel at the ease with which it is transacted.

"With your kind permission, though it may be like 'taking coals to Newcastle,' I shall instance a very common transaction, which you bankers take as a matter of course, but which is none the less marvellous.

Remitting Funds by Foreign Exchange.

"A merchant, who, we will say, is a wholesale dealer in produce, is in want of a carload of butter, but, owing to the cold weather, he cannot obtain it here, or on the prairie, or in Eastern Canada. He cables to his correspondent in New Zealand or Australia, and gets an offer of the quantity he requires which, at cost of transportation and insurance, he can supply to his customers here at a fair profit, provided he gets it in a given time, which means that it must be shipped from New Zealand by boat leaving there in two days. He consults his banker in regard to the transaction and the rate of exchange, and finds that he can provide for the exchange and still have a profit. He arranges with his banker to cable to his agent in, say, Wellington, instructing him to pay the money in pounds, shillings and pence to the exporter on delivery of his bill of exchange drawn upon him here, with bill of lading and other documents attached. He also cables the exporter to the same effect. The butter is shipped by the next boat, and in course of time he gets the bill of exchange from his banker, and, finding the ship in port, with the butter as ordered, he pays for it in our own money of dollars and cents, delivers the butter to his customer, who, in turn, supplies the hungry consumers, and all are happy but the banker, who does not think his profit has been sufficient.

The transaction I have outlined is, I believe, known as one of foreign commercial or documentary exchange. You can correct me if I am wrong. The reverse of this would be when one of your exporters, say, of lumber or pulp, is shipping a cargo to Japan or China. He hands you his bill of lading and other necessary documents, with a bill of exchange on the purchaser for the selling price, drawn for the

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific

New York Agency: 63 and 65 Wall Street

Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

term agreed upon in the equivalent of yens or Hongkong dollars, as the case may be, and immediately gets credit in his account at the rate of exchange for conversion to dollars and cents. The bank, acting as your agent in the Orient, on payment by the drawee, places the Oriental funds to your credit, to be drawn on as you require, or will convert to sterling and place the funds at your disposal in London, charging you the rate of exchange for conversion, as you charged your customer in the first place. Should you elect to have the funds transferred to London, and wish to use them here, you proceed to sell what is called a 'bankers' bill of exchange' on London, and consider whether it would be to your advantage to draw it at sixty days' sight or on demand, or you might find a purchaser requiring funds in London immediately and sell a cable transfer. It is all a question of the rate of exchange, or the cost of conversion to dollars and cents, taking into account what your money is worth in London; the rate of discount there for a sixty-day bill, the street rate being generally lower than that of the Bank of England; the cost of stamps on a time bill, which, I think, is still one shilling per hundred pounds; the time to be allowed for remittance and acceptance; your London banker's charge for conducting your account, and other factors.

You have already paid out dollars and cents in the purchase of the documentary bill of exchange, and taken credit in yens or Hongkong dollars, and converted these into pounds shillings and pence, and your business is to make all you can in reason out of the transaction. If you sell your sterling in New York, you make allowance for the transfer of funds from that city, or you are in touch with Toronto and Montreal, and may, by telegraphic instructions, sell your London exchange in one of these cities, in which case you must sell a draft or telegraph transfer on either of these centres, keeping in mind the cost of transfer of what may now be termed 'domestic or inland exchange' in order to finally get the use of the money here.

"The experienced bankers will, I trust, pardon me for mentioning these supposed transactions for the benefit of some of the younger gentlemen, who may not be familiar with such procedure.

English System of Currency.

"It might be of interest to have a smattering of the history of some of the currency I have just referred to. The calculation of pounds, shillings and pence to the native-born Englishman is the very simplest thing in the world, and he cannot conceive of any mortal wishing to express value in any other way, and has no patience with the poor individual who experiences trouble in the computation of that involved and historical currency. He knows that a penny was, after a succession of experiments, found to be the weight of 24 grains of wheat, taken from the middle of the ear (long before Manitoba hard wheat was thought of), and he learned in early life that 24 grains make a pennyweight, and he knows also that 240 pennies make a pound, but he might not be aware of the fact this this was a pound weight in silver under the old Roman standard, and that this pound was coined into shillings (the word being an old one, meaning to divide), sometimes into 20, and in the time of Edward II., into 25, but thereafter always 20 shillings.

"The reckoning of pounds, shillings and pence is second nature to the Englishman. If you tell him that an article costs $6, he is entirely at sea, until by a mental calculation he converts it into one pound, four shillings and sevenpence halfpenny, and then the matter is absolutely clear to him, and he knows what you mean.

"Our currency of dollars and cents is a matter of evolution through many variations. Being a colony of Britain, our forefathers naturally computed their money in pounds, shillings and pence, but it became somewhat involved with the Spanish daler, or dollar, and in 1777 the old Halifax currency was established, taking the Spanish dollar at five shillings, or $4. to the pound sterling. They also used all kinds of money, including French, Spanish, Portuguese, Danish and Mexican, the real of the latter country being called a York shilling, and current as eight to the dollar. Some of you will remember when the British sixpence was called a York shilling. In 1812 army bills were freely used through the want of currency. In 1853 the decimal system of dollars and cents was established on the basis of the old Halifax currency, and in 1858 the decimal system of the United States was adopted, and still obtains. In this connection we should not call our five and ten-cent piece 'nickel' and 'dime.' Someone named the former 'chicken food.' Why not call it 'chick' and the latter 'dix,' thus displaying originality?

"The British colonies which formed the United States finding the Spanish dollar more convenient than the British currency, adopted it in the year 1702, a long time before their independence. The cent, of course, is the one-hundredth part of a dollar, and the word conveys the meaning.

"For over half a century, therefore, the monetary systems of Canada and the United States have been practically the same. By statute, the gold half-eagle, and multiples thereof, of proportionate weight pass current and are legal tender here, and gold coins may be struck in Canada of standard weight and fineness to that of the British pound or sovereign in such proportion as $5 bears to $4.86.2/3. This was the rate of conversion established by the statutes of Canada, chapter 25, section 2, which enacts that the British sovereign, of proper weight and fineness, shall be equal and pass current for $4.86.2/3 of the currency of Canada. The same rate of conversion obtained in the United States until the year 1873, when Congress fixed the exact value of the pound sterling at $4.86.65, and, if I may trouble you with one or two figures, I would say it was arrived at in this way, the conversion rates of both countries being so nearly alike that one illustration will serve:—

"The gold dollar in the United States contains
25.8 grains Troy weight, 9/10ths [fine
Deduct 1/10th .2.58.

Leaves the weight of gold 23.22. grains.

"The British sovereign or pound contains
123.274478 grains Troy weight, [11/12ths fine.
Deduct 1/12th 10.272873

Leaves the weight of gold 113.001605 grains.

Exchange between England and America.

"Dividing the former into the latter gives the result of 4.866563, but the United States, for convenience, fixed the value at 4.8665, as above stated. The pioneers in America, by which I mean Canada and the United States, in their attempt to ascertain the exact value of a pound in dollars and cents, appear to have become deplorably mixed, and settled the value in the first place at 4.4444, repeating, and so it stood for years until, through circumstances upon which I need not elaborate, it was ascertained that the pound sterling was really worth 9½ per cent. more than that, or 4.8666, repeating, as before stated, and the par of exchange between Britain and America was established at 9½ per cent. premium. This was an anomaly, to be sure, but in those days, time, though not as valuable as it is at present, did not permit of calculations by this complicated method, and many individuals compiled and published tables for conversion. The speaker, among others, acknowledges his appreciation to the gentlemen of the banks for recognition of a humble effort in this direction in days gone by.

"The enterprising Americans, if I may use the term, possessing less patience than we Canadians, after they had changed their standard to 4.8665, before mentioned, in the course of time changed their method of quotation to the dollar rate, instead of the complicated percentage, and have ever since quoted in this way.

"One of the leading Canadian bankers in New York at that time, a well-known Scotchman, told me he thought the United States method of quotation was a great mistake, as people would know what they were getting and the bank's profits would be that much less.

"The man on the street, who is constantly dealing in exchange, if asked why the par of sterling is 9½ per cent. premium, might reasonably answer something in the same way as the old railway engineer, who was constantly using the air-brake, when asked how it was made, said, 'It's easy enough. You just take a cylinder and fill it full of vacuum.'

(To be Continued.)

The new mill at the Patricia Mine at Boston Creek will be in full operation and another gold producer added to the list within ten days. The first ground was broken on the surface last fall and a large set of camp buildings erected.

The bill to amend the Income Tax Act was read a third time on Monday in the House. Mr. Lemieux suggested, in this connection, that the finance department should publish a primer, as was done in the United States, indicating how income tax returns were to be filled. Mr. Maclean replied that he understood such a publication was now being prepared.

GOVERNMENT AND THE RAILWAYS

Temporary Assistance Necessary—Acquisition by Government Not Essential—Systems May Be Co-ordinated and Yet Be Independent

(This is the third of a series of three articles by Mr. W. T. Jackman, M.A., the first two of which have already appeared in The Monetary Times.)

What plan, then, shall be recommended for preserving the efficiency and the *esprit d'entreprise* of these private lines, rather than taking a retrograde step in handing them over to government ownership?

For the present time, and in view of the fact that the managements of our private railways have been invariably economical in their use of funds and efficient in the operation of their roads, I can see no better course to pursue than that the government should help them over the crisis until normal conditions are once more restored. Let these funds be spent under the careful supervision of the Board of Railway Commissioners, so that the properties will be conserved and built up and their earning power augmented. When the Railway Inquiry Commission could report that for the large government contributions that had been made to the Canadian Pacific Railway the country had received ample recompense, there is no reason to hesitate in adopting this course to aid the Canadian Northern and the Grand Trunk Pacific in the temporary emergency. If the minister of finance could say concerning the Canadian Northern that the majority of those most competent to judge considered that this system is "likely in time to be a decidedly paying concern," and that he felt "quite optimistic with regard to [its] future . . . once it gets over this trying period," it would seem as if prudence should have dictated the policy of emergency aid, rather than the radical, untried and unknown plan which the government adopted. If a reasonable amount of government aid could enable these roads to work their way out of the financial straits and get back to customary conditions, when they can carry their own burdens, it would appear that such assistance would be well advised. When the Canadian Northern Railway, during the time of war, with inadequate rolling stock and incomplete roadway and terminals, can increase its net earnings almost 100 per cent. in two years—from $6,600,000 in 1915 to $11,500,000 in 1917—it is evident that the government could have well afforded to aid this company in the same way as it did the Grand Trunk Pacific by giving a well-secured loan sufficient to enable it to carry on successfully.

Transportation After the War.

Then, when the war is over and the country has settled down to the pursuits of peace, when the mental unrest and social disquietude of the present has subsided, and we can think clearly and work uninterruptedly in securing the best means for the promotion of the national life, we shall be in a position to view the transportation problems in an entirely different light from that of to-day. Certainly, the means of conveying passengers, mail and light goods will be revolutionized by the introduction of the airplane and its speedy service; and the great changes in the carriage of heavy commodities by the use of motor trucks upon the highways and by the inter-urban lines, will bring readjustments of far-reaching influence. But, so far as we can see at present, the steam railways are not likely to be superseded, at least for some considerable time, as the most effective means of carrying heavy goods for the long distances; and, therefore, the great desideratum is to formulate some plan by which their greatest service can be rendered most economically to the public during the years of peaceful expansion ahead of us. How may this be attained?

Economy of operation and of capital requires that these railways should be permitted to work together, in order to eliminate the wastes of competition; and great economies of capital, as well as of operating expenses, can thereby be secured if a reasonable arrangement can be reached for the welfare of the existing rival interests. The plan submitted by Mr. Smith in the minority report bears clear evidence of the skilful railway strategist. It is a plan which is designed to save capital as much as possible, to disturb existing conditions to the least extent, and yet to bring out of the confusion such an adjustment of railway relations as would furnish to the country the maximum of service and to the railways the utmost frugality of expenditures. It seems to me, however, that one important factor has been omitted in his solution of the problem. If the Canadian Northern is to operate the lines west of Winnipeg, and at that city turn over all its traffic to, say, the Grand Trunk, which, by supposition, is operating the bridge lines between Winnipeg and North Bay and all the lines east of North Bay, it is evident that the through rate on grain, for example, from the far west to Montreal would be the sum of two rates, that of the Canadian Northern to Winnipeg and that of the Grand Trunk from Winnipeg to Montreal. Now, while the Board of Railway Commissioners would require these railways to put into effect for this traffic a through rate which would be less than the sum of the two locals, this through rate would not be so low as if the traffic went by only one line all the way from origin to destination—in the same way as it is carried by the Canadian Pacific. Moreover, it is the long haul through traffic that is most profitable to the railways. It seems, therefore, that some arrangement which would permit this traffic to go the entire length of its haul without change would furnish to shippers a lower rate and better service, while giving the railway larger net returns in earnings. I am well aware that an objection may be urged against this suggestion by saying that at the crop-moving period the Canadian Northern would need all its cars in the western sections in order to move the wheat to Winnipeg, and, therefore, it could not afford to have a large amount of its rolling stock engaged in taking the grain from Winnipeg to Montreal. I have anticipated these contingencies in the policy which I desire here to outline:—

A Division of Control.

Relieve the Grand Trunk entirely of its original obligation to lease the National Transcontinental and hand over this line from Winnipeg to Quebec to the Canadian Northern, to be operated by the latter in connection with the rest of its system. When the accounts of the National Transcontinental during its first year of private operation were made up, showing the balance of net earnings over expenditures, let this amount be divided equitably between the two parties according to a definite agreement. This agreement should continue for, say, ten years. When the government has equipped its line with rolling stock, there is no reason why a satisfactory arrangement cannot be made for its operation upon a partnership basis of this kind. It is reasonably certain that with the development of this northern country the earnings of the railway would continually increase; and this would suggest that at the expiration of the ten-year period a new adjustment should be made between the two parties for another term of years on a similar profit-sharing basis. As to the Grand Trunk Pacific, this should be handed over to the Canadian Northern upon a 99-year lease, the amount of the rental to be fixed at a sum equal to the fixed charges of the company. This would absolve the parent Grand Trunk from its liabilities for its guarantees which it cannot now meet, and would substitute the guarantee of the lessee company therefor. The fact that the Grand Trunk Pacific lines are interspersed with those of the Canadian Northern would indicate that marked economies could be obtained by having the operation and management of the two systems concentrated in the same hands. Upon this long lease, which would amount virtually to ownership, the Canadian Northern could well afford to build up the earning power of the Grand Trunk Pacific, so that, while thereby contributing to its own revenues, it would be developing another strong line for the upbuilding of the west. Then, as to the Canadian Northern itself. Let this company operate its western connections and also the direct line from Winnipeg to Montreal. As I have shown, its net earnings have been increasing rapidly. Give it the outlet for its great western traffic by allowing it to reach the greatest port and one of the greatest distributing centres of the east. Its long haul will be its most profitable business and, if for a few years it should require a small amount of aid from the government to put it on its feet, the company would be developing the country and its business upon a scale that would more than compensate for the temporary contributions of the government. The company's accounts would always be open for inspection by an authorized government official and so any misuse of funds could be readily avoided.

As to the Grand Trunk, let it confine its operations to the east, where it has been successful. It should be required to lease and operate all the lines of the Canadian Northern east of North Bay, except that company's main line to Montreal, paying therefor an amount of rent equal to the fixed charges of these lines. This lease likewise should continue for a period of 99 years, thereby giving the Grand Trunk practical ownership of the lines taken over. The elimination of the

competition between these two companies which would thereby be effected would cause important economies of operation with consequent increase of net earnings. It is reasonably certain that the Grand Trunk, under these conditions, could make a decided increase in its net returns, and this would enable it to expend more in the provision of additional rolling stock, thus laying the foundation for larger service and still greater economies.

Further Government Aid Necessary.

It may be said by some that this would mean increased aid from the government for private railways. I acknowledge that it would mean expenditure of public funds in providing the National Transcontinental with a reasonable amount of equipment for a traffic which will, doubtless, increase in volume in the near and unfolding future; and it would also mean that for a few years there would have to be some contributions, becoming progressively smaller, in aid of the Canadian Northern. I am assuming throughout this plan that the Canadian Northern would be left in private hands. But, in carrying out this scheme, little, if any, aid would be required for the Grand Trunk, which would be relieved of the unduly heavy load which it has been trying to carry for its subsidiary. The plan would have the immense advantage of keeping the great railways in private hands. Does anyone doubt this advantage? Listen to the words of the Railway Inquiry Commission: "Government by a Cabinet responsible to a popularly elected parliament is . . . not a form of government suitable for the management of a railway undertaking." Do the people of this country want anything more strongly pronounced against the popular cry for government control of the railways? Would that this idea could become the rooted conviction of those for whom the words were written by the commissioners!

Monopoly May be Beneficial.

It is with some hesitation that I bring forward, at the close of this paper, the policy which to me seems the goal toward which we should work, that is, to join all the railways under some common organization so as to enable them to work in harmony. I do not think we are ready for this just yet; it will take perhaps some years of experience and education to cause the public to see the enormous savings and the vast improvement of service that might be secured by this change. At present, people hold up their hands in horror at the mere mention of a monopoly, not recognizing that we have many benevolent monopolies in our midst. To the great majority that word conveys the idea of extortion, deceit, illegal methods, exaggerated profits, and a multitude of other like enormities and excesses. It may take years before we shall learn that monopoly prices and profits are not necessarily extravagantly high. In fact, we have already seen, in the case of one or two of our industrial monopolies, that their prices are lower, much lower, than when competition prevailed. After many years of careful research and thorough study of the problems of transportation, I am impelled to believe, at least tentatively, that the best interests of Canada would be served by grouping all the railways under centralized control, so as to remove the baneful effects of competition and put an end to the prodigal waste of the people's money and the national capital. This centralization of management should, of course, be left to private enterprise, but under effective and discriminating regulation by some governmental body like our Board of Railway Commissioners. It appears to me that the sooner we can get our regulative machinery adjusted to this advanced point of view the better it will be for all interests. There are some businesses which are essentially competitive in their nature; but transportation is so unlike the mercantile or ordinary manufacturing business that for it the law of survival of the fittest, under the operation of competition, does not hold, for competition affects the strong more disastrously than the weak. In urging that the railways should be formed into a unified whole, I may appear to some as an *advocatus diaboli*, but those who will give the subject the earnest and prolonged study that it merits cannot fail to see the wide range of economies which might thereby be obtained. As I have intimated, this is a plan which, perhaps, we are not yet ready as a people to put into effect; nevertheless, my conversations with those who have large business interests at stake have shown me that these men would welcome such a change.

How could such a unification be accomplished? To give effect to it through the complete consolidation of all the companies would involve such amounts of capital and would meet with so much opposition, that I fear it could not be carried out without extreme difficulty. But if section 376 of the Railway Act were amended, so as to permit one railway company to invest in and hold the shares of other railway companies, the desired result could be secured easily by means of the holding company. Either form a new company, a pure holding company, with authority to own the stocks of the private railways and thus use this stock ownership for giving unity of direction to the various companies; or, perhaps, better still, give the strongest company of all, the Canadian Pacific, this right to invest in the stocks of the others. Then, when this company had secured 51 per cent. of the share capital of the Canadian Northern, Grand Trunk and Grand Trunk Pacific, it could so control the policy of these roads as to cause them to work in harmony with itself and with one another. It might be that, at a later time, the government would find it advantageous to hand over its lines to this holding company upon terms that would be mutually profitable. These shares need not all be paid for in cash; they might be purchased advantageously in exchange for the buying company's own securities, and thus there would be great saving in the use of capital. But one further benefit from this policy I must not forget to mention—namely, that by this means the Canadian Pacific could, through the sale of its own bonds, pour funds into the development of each of these other roads, that would render them entirely independent of government assistance. Besides, the holding company organization would preserve intact those effective official relations which have done so much for our Canadian railways and would leave the inducements of honor and profit as potent for good service as they have been hitherto. As I have said, this unification is earnestly to be desired; and along with it there would have to be an extension of the powers and duties of the Board of Railway Commissioners. Suitable legislation or taxation would also be required in order to prevent the monopoly from becoming oppressive in future. Thus we should have an integrated transportation system of great resources and wonderfully adapted to the increasing needs of the country; which would use its vast influence and exchange mechanism for securing the upbuilding of the country in all that contributes to the national wealth and for carrying our Canadian products half-way around the world.

DOMINION FISHING LICENSES

During the fiscal year ended March 31st, 1918, the Fisheries Branch of the Naval Service Department issued 26,465 fishery licenses, an increase of about 4,000 over the previous fiscal year. It is anticipated that a still larger number will be required during the current year.

IMPORTANT DECISION REGARDING SILVER MINING

The case of the Minerals Separation Company versus the Butte-Superior Mining Company, has recently been decided in favor of the latter by the Higher Courts of the United States. The former had brought a claim against the Butte Company for an alleged infringement of patent rights. The mining company has been using the oil flotation process and recovering silver from mill slimes since 1913. Plaintiff claimed that the process was theirs, and that the Butte Company not only owed them current royalty, but also back royalties, totalling several millions of dollars. The case was heard in the lower courts and decided in favor of the Minerals Separation Company.

Now, however, it is held that the method of recovery used by the mining company is not that controlled by the Minerals Separation Company by patent rights. This means that Cobalt companies can by using a similar method of recovery, avoid paying a royalty to the Minerals Separation Company. This would also permit the continued use of the Callow process. Most of the Cobalt companies which have large accumulations of mill slimes, have erected or are erecting oil flotation plants.

This decision does not, of course, conclusively settle the claims of the Minerals Separation Company, but rather limits its claims to the particular process defined in its patent.

A resolution was moved on the 16th inst., in the Australian House of Representatives, authorizing a loan of £80,000,000 at 5 per cent., subject to taxation.

IF YOU SHOULD LOSE A WAR BOND

If you should lose a War Bond it might be possible to have it duplicated by the Government, if it were registered, but it would cost much trouble and inconvenience, besides some legal expense. Does it not seem unwise to run needless risk with your Bonds when you consider how much safer and more convenient it would be to have a Private Box in our

SAFETY DEPOSIT VAULTS

where Bonds and all other valuable papers may be kept strictly private and always accessible during business hours.

Private Boxes, $3 Per Year, Upwards

Visitors Welcome. **Booklet Sent on Request.**

FLAX-GROWING IN MANITOBA

More Dependable than Wheat Crop—Manitoba Not Generally Suited to Flax-growing—Results of Previous Efforts in the Industry

Flax has been grown for its fibre for a number of years in the provinces of Ontario and Quebec, but the acreage has been gradually decreasing in recent years. According to the official reports of the Provincial Government of Ontario, the area devoted to this crop in Ontario for the year 1911 was 12,128 acres, but less than half of this amount was sown in flax in 1915. For the production of good flax fibre, a climate with a long moderately warm growing season is required. The country should not be liable to drought and there should be a considerable amount of moisture in both the soil and air.

A bulletin has been issued by the Manitoba Department of Agriculture and Immigration which discusses the possibilities of flax as a local product. It is pointed out that the necessary conditions of climate do not exist in Manitoba except in rare isolated districts, and consequently the general production of flax for fibre is out of the question. Moreover, experience and skilled labor is not available. The production of flax seed for export purposes is more promising, according to experiments conducted by the Dominion Experimental Farms, the College of Agriculture at Saskatoon, and the Manitoba Agricultural College. The bulletin discusses the present opportunities as follows:—

Flax Growing as an Industry.

The present high price of flax on the market, coupled with the action of the Imperial government in loaning ten thousand bushels of fibre flax seed to the farmers in Western Canada and guaranteeing a fixed price of $4.50 per bushel for the crop produced from this distributed seed, is no doubt drawing particular attention to the desirability of including this crop in the list of those to be grown during the present summer. It may also be that the rust epidemic among many cereal crops of 1916 has suggested to many farmers that it would be very desirable to have a portion of the land devoted to some crop that is not so likely to be affected by rust. The results of experiments conducted in the college investigation field during the summer of 1916 show that a much greater profit could have been secured by sowing flax instead of wheat on the later-sown fields. Good yields of flax were secured in most sections even where the wheat was more or less a failure. It must, however, be understood that while the demand for flax on the market at present is strong, any very marked increase in the production is likely to depress the present high prices, owing to the demand being somewhat limited.

A Pioneer Crop.

To a large extent the production of flax has been a pioneer industry. This is due to the fact that as a crop it has been considered particularly well adapted to sowing on new breaking. Owing to the comparatively shallow root system of the flax plant, it is able to make good growth on a seed bed in which the available plant food is relatively close to the surface. Moreover, the threshed product brings a high price in proportion to its bulk, this making it a good crop for the new settler some distance from the railroad. With the settling up of large areas of the new land in the western provinces and the northern portion of the United States in the decade 1903-1912, the production of flax increased rapidly, reaching the highest point in all of the western provinces and the United States in 1912. The supply in 1912 exceeded the demand, with a consequent drop in prices, which was reflected in an immediate decrease of production. Since that time production has constantly declined and prices have gradually increased, until prices are now higher than ever before.

The Claim for a Permanent Place.

There is really no good reason why flax should not secure a permanent place in the list of crops grown in Manitoba. The soil and climate are adapted to its growth, and it may be handled with the ordinary farm machinery. The yields secured are such as to render it a profitable crop to grow except under such conditions as have already been mentioned. The day of the pioneer is passing, and it is scarcely likely that such a sudden increase in production will occur in this manner again. With uniform production, prices should tend to be steadier than in the past.

According to the report of the Department of Agriculture for 1915, the average yield of flax in Manitoba during the past 25 years has been approximately 12 bushels per acre. Yields varying from a few bushels to 30 bushels or more have been secured. The average cash price for flax on the Winnipeg market for the ten years, 1907-1916, was $1.61 per bushel. There are no figures available to show the acre value of flax in Manitoba, but it is significant that flax has shown under certain conditions a higher acre value than wheat, oats or barley. According to figures secured in Minnesota, the acre cost of production of flax is approximately the same as that of wheat. During the 10-year period from 1906 to 1915 in Minnesota, the acre value of flax was greater than that of wheat, oats or barley. From these figures it is apparent that flax was a profitable crop to produce within certain limits.

VANCOUVER MAY PURCHASE ELECTRIC RAILWAY

According to the franchise of the British Columbia Electric Railway Company, the city of Vancouver may purchase its property and lands, providing it signifies its intention of doing so not later than August of this year. The subject was discussed at a recent meeting of the Vancouver Board of Trade, and a letter addressed to the mayor of the city calling attention to this fact and placing the services of the board at the disposal of the city. The company owns and operates 334 miles of electric railway. It is an English limited company, incorporated in 1897, and carries on under powers conferred by acts of the parliament of British Columbia, a well-established electric railway, lighting and power business in Vancouver, North Vancouver, South Vancouver, Point Grey, New Westminster, Victoria and other adjoining municipalities. Most of the company's securities are held in England. The total share capital issued is £4,320,000, in addition to which there is over £1,800.000 of debentures and debenture stock. This is the largest public utility corporation in the province.

EDMONTON'S PUBLIC UTILITIES

The public utilities of the city of Edmonton are all on a satisfactory basis, with the exception of the street railway system, and new rates have been adopted with a view to wiping out the deficit on this account. The following is a statement of revenue and expenditure of the different departments for the month of March, 1918:—

Electric Light and Power:	
Revenue	$47,321.74
Operation and maintenance	23,597.31
Surplus	$23,724.43
Street Railway:	
Revenue	48,214.85
Operation and maintenance	33,129.90
Surplus	$15,084.95
Telephone:	
Revenue	23,199.08
Operation and maintenance	7,775.61
Surplus	$15,423.47
Waterworks:	
Revenue	28,985.43
Operation and maintenance	14,595.68
Surplus	$14,389.75
Surplus on operation	$68,622.60
Capital charges	63,219.57
Net surplus on all utilities	$ 5,403.03

The surplus for last month was somewhat larger, being $14,427.97. The surplus for the first three months of 1918 is $37,543.25, as compared with $20,122.36 for the same period last year.

A substantial increase in the Winnipeg tax rate is expected. At a recent meeting of the council, it was hinted that an increase of about 6 mills might be necessary.

PACIFIC COAST CONDITIONS

Business Greatly Improved in Vancouver—Shipbuilding is Very Active—The Loaning Situation

(Staff Correspondence.)

Vancouver, May 15th, 1918.

General conditions in British Columbia, and in particular, in Vancouver and Victoria, the two largest centres of population, are decidedly improved. The shipbuilding industry has assumed large proportions, and every available man not enlisted, and who knows how to handle a hammer is at work in the shipyards. Work is plentiful and wages are good. The problem of cheap labor is one that affects Vancouver and the Pacific coast generally, and if the enormous natural resources of the province of British Columbia are to be developed a solution of the labor problem will undoubtedly have to be found. Vancouver merchants and wholesalers are doing a better and more profitable business than ever before, and an air of prosperity is everywhere apparent.

Real Estate Conditions.

General loan conditions also reflect the changed situation. Payments of both interest and principal are better than at any time during the past three years, and the general tone in regard to mortgaged properties has vastly improved. Equities are being protected, but for the making of new loans, conditions are not yet ideal, and new mortgages are only being placed on a basis which has little attraction for owners of property and precludes new building operations where assistance is required. Values have stiffened, and although sacrifice sales are still being made, they have become fewer. Rents have increased materially, and the tendency is still upward; consequently, there is a moderate demand for medium priced homes, and sales are frequent at fairly reasonable prices.

Investments in Demand.

The manager of one of the large financial firms in Vancouver said to *The Monetary Times*:—

"We find a good market for Canadian war bonds, with but few sellers. Mortgage interest collections are steadily improving. Many mortgagors, who have been hitherto unable to make any payments, are now doing so. Also, many mortgaged properties are being sold into better hands.

"In the real estate market, house properties have been active since the first of the year, more so before the commencement of the present offensive. The movement has extended to all classes of residential property. There is practically no speculative or investment demand.

"Rentals have steadily increased, advancing from 25 per cent. to 100 per cent. for houses and apartments, with no vacancies. Business properties and offices remain fairly stationary.

"We have experienced an active demand for well improved farms since the beginning of the war, and good listings are now scarce. Farmers, we find, are doing well, but are apprehensive over the future of the local dried vegetable industry. Business seems to be on a steady up grade."

The Loaning Situation in Vancouver.

Speaking of the loaning situation in British Columbia and particularly in Vancouver, the local manager of one of the large eastern financial houses said to *The Monetary Times*:—

"I should say that very little money is being put out on mortgage. The fact that not only enlisted men but relatives directly or indirectly dependent upon such have been granted protection under the War Relief Act, limits the number of those who might be looked upon as desirable borrowers, for relief granted under the act is not given to such persons at the country's expense, but chiefly at the cost of the parties who loan money on the property and at the expense of municipalities which are unable to collect taxes in order to meet their own obligations. There is a growing feeling that protection for the enlisted man and his family should be the burden of the country at large and not of any one class or section of the community.

"The hesitancy of some of the leading municipalities to bring on a tax sale and clean up a truly embarrassing situation is something which all lenders must consider a drawback, for there is no assurance in loaning money on improved real estate that taxes will not be permitted to accumulate as a charge in priority to the first mortgage. Mortgagees would have some protection if they knew that payment of taxes in arrears for at the very most two years would be enforced by the municipality. Enlightened public opinion would back up the city council of Vancouver in any effort to ascertain its 'real' situation which must remain unknown until a tax sale is brought on. It would then be ascertained just what proportion of the outstanding taxes must remain uncollected until after the war is over.

"Speaking of conditions generally, a great improvement is noticeable. Residential property is renting better owing to the activity in shipbuilding and allied industries, but there is no demand for land. If there is much industrial expansion homes will be required for working men, but it is difficult to say how these are to be put up while capital is unwilling to advance money under conditions created by restrictive legislation."

A Veteran Banker's View.

"The greatest assets that Vancouver has is its port, facing on the Pacific," said Mr. Wm. Godfrey, manager of the Bank of British North America, in Vancouver, to *The Monetary Times'* western representative, "where it might be said commerce is only at its beginning. Its comparative nearness to the Orient, whose trade will undoubtedly come this way to a large extent, makes its possibilities as regards foreign trade in the future almost incalculable.

"The importance of the shipping business here is naturally great, and the coming of such people as the Robert Dollar Company, with their line of steamers, which formerly had their home port in San Francisco, is significant. No doubt this is partly owing to the impossible shipping laws that the United States have passed.

"Shipbuilding is practically a new industry on the coast, only having been started last year. Up to the present time 16 vessels, 12 auxiliary schooners, 4 steel steamers, have been completed, and two steel steamers and 11 wooden steamers have been launched, but not quite completed. Five steel steamers, 15 wooden steamers and 2 auxiliary schooners are at present building, and 46 other vessels are practically arranged for, but not yet started.

"With our resources in the way of iron and steel lying in close juxtaposition there are strong hopes that an iron and steel industry will be built up in this province, with perhaps a little judicious help from the Dominion government, a small quantity having already been granted by the provincial government. If this takes place, shipbuilding (which at the present time brings our steel plates from Pittsburg, which is somewhat unnatural and inconvenient), should be continued and enlarged. The new wooden ship, either auxiliary schooner or steamer also should stay. The schooner auxiliary power, can really kick along about as fast as the old tramp, so she can hardly be called a sailer. With the splendid wood we have here, which can be cut in great lengths, the Pacific coast is undoubtedly the best place for wooden shipbuilding in the world.

"Our mining last year produced a little less than before, but it is undoubtedly in a healthier condition than it has been for some years, although it is being hard hit by taxation. Almost every description of metal is found in British Columbia, and we are only at the beginning of this industry.

"The pulp business, of course, is an off-shoot which has only been started within a few years, but it is making strides.

Fishing.

"While salmon, and afterwards halibut, to a certain extent, were the only fish that were known a few years ago, herring, pilchard, oysters, etc., from British Columbia, are becoming known all over Canada now. The herring business in particular has been developed in the last few years till it is assuming an important size.

"While British Columbia in the ordinary way is not considered an agricultural country, during the last few years it has developed considerably, not only in grain growing in Kamloops and other up-country places, but our potatoes two years ago were sent down as far as Texas, and everywhere considered the best on account of their flavor, etc.

"The ordinary bean, too, is coming in for its own; large quantities being grown in Ashcroft, Lillooet, etc., and commanding the best prices going.

"The product of fruit runs up into millions of dollars worth, and small fruits, tomatoes, etc., are now being packed on quite an extensive scale, the flavor of our fruit commanding a ready sale wherever offered. An important side industry is being built up in jams, pickles, etc."

NICKEL REFINERY FOR QUEBEC

A contract has been arranged between the British-American Nickel Corporation and Messrs. Bate, McMahon and Company, contractors, for the erection for the former of a nickel and copper refining plant at Deschenes, Quebec. The cost is expected to be over $1,000,000. This will be for the refining of ore from the Sudbury district, where the mines and smelters of the company are located.

INDUSTRIAL RECONSTRUCTION ASSOCIATION

An organization has been formed called the Canadian Industrial Reconstruction Association, for the purpose of considering and preparing to meet Canadian post-war problems in the industrial sphere. It is to be nation-wide in extent with headquarters in Toronto and Montreal. Baron Shaughnessy is honorary president of the association, and the executive councils in these two cities are composed of prominent business men.

The specific objects of the association are: (1) To maintain industrial stability; (2) to secure wise consideration and prudent treatment of problems of reconstruction. According to the manifesto issued by the association's provincial executive committee, it will investigate into conditions of various industries, the markets which they must supply, the particulars of labor as compared with competitive industry elsewhere, and the relative cost of transportation. They also intend to promote better relations between labor and capital and the social and industrial welfare of women. Technical and general education are to receive its support. Produce and land settlement, co-operation among rural producers and the improvement of rural conditions are also to be regarded sympathetically.

The association is to be educational and will devote much of its efforts to the presentation of facts, rather than to opinions, including the activities of other countries along similar lines. The members of the Toronto executive committee are as follows:—

Sir John Willison (chairman), Senator Nicholls, Senator N. Curry, Huntley R. Drummond, George E. Drummond, J. H. Sherrard, John F. Ellis, W. K. George, W. K. McNaught, C.M.G., S. R. Parsons, T. A. Russell, William Stone, H. D. Scully, R. Hobson, Lt.-Col. Harry Cockshutt, W. M. Gartshore, R. O. McCulloch, W. J. Bulman, E. A. Mott, Major A. N. Worthington (secretary).

The members of the Montreal executive committee include Sir Frederick Williams-Taylor, E. W. Beatty, Howard G. Kelley, Wm. McMaster, W. M. Birks, W. A. Black, W. J. McConnell, Wm. Rutherford, F. W. Molson.

On the 3rd inst. the United States Senate recorded itself in favor of increasing the Government minimum guarantee price for wheat, from $2 to $2.50 per bushel. This was done in spite of the fact that it had already been rejected by the House of Congress.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Dartmouth, N.S.—Tenders will be received by A. Elliot, town treasurer, for the purchase of $125,000 new school bonds and $5,000 water and sewer extension bonds. These bonds are dated July 2nd, 1918, redeemable in ten years, and interest at 6 per cent., payable half-yearly.

Essex County, Ont.—The finance minister has approved of the issue of debentures by the Essex Border Utilities Commission to pay for the construction of the trunk sewer for part of Sandwich East, Ford, Walkerville, Windsor, Sandwich, Sandwich West and Ojibway. The detail plans for the east interceptor to be built in Walkerville have been prepared, and it is expected bids will be asked on May 20th. This is the work endorsed by the ratepayers on March 30th by a large majority.

Calgary, Alta.—The manager of the Calgary branch of Molsons Bank was called into consultation with the city council in reference to a $2,000,000 demand note held by the bank against the city, according to a recent report. He stated that the note should be paid, and advised the city to finance the payment by a bond issue. He stated that the bank would not be willing to wait for payment until arrears in taxes were collected, and advised, further, that the city make a determined effort at once to get a fixed policy of finance.

Regina, Sask.—The city clerk has intimated that the city contemplates placing on the market another bond issue in the near future at terms more attractive than the previous ones. The issue referred to is the one for $55,000 to cover the damages in connection with the construction of the Broad Street subway and the $180,000 necessary to provide a new unit for the power-house. The city has not yet decided what method of sale for these debentures will be adopted, but it is presumed that it might be possible to sell the bonds locally.

Edmonton, Alta.—The council agreed to the recommendations of the finance committee in regard to the arrangements for securing the extension of the $2,000,000 issue of short-term debentures against the 1914 and 1915 tax arrears, and which fall due on July 1st of the present year. A by-law authorizing the extension and method of procedure was brought down and given the first reading. The method is to enter into special agreements with the bondholders, save in the case of the sinking fund trustees, who hold 653 of the issue, and have stated their willingness to extend the time for payment for a further two years from the date of maturity.

The mayor said that, taking the payments to the special agents into consideration, it meant that they would be paying 8 per cent. for the money, or, considering the present rate of exchange, about 7 per cent.

Toronto, Ont.—The city's issue of $736,000 5½ per cent. 20-year serial gold bonds was awarded to a syndicate comprising Messrs. A. E. Ames and Company, the Dominion Securities Corporation and Messrs. Wood, Gundy and Company, all of Toronto.

The following bids were received:—

Syndicate comprising A. E. Ames and Company, Dominion Securities Corporation, and Wood, Gundy and Company bid	95.265
Syndicate comprising Morrow and Jellett and Greenshields and Company bid	94.831
Syndicate comprising Canada Bond Corporation, C. H. Burgess and Company, and Campbell, Thompson and Company bid	94.73
Syndicate comprising A. Jarvis and Company and R. C. Matthews and Company bid	94.68
Kerr, Fleming and Company, for their own account, bid	94.222
Syndicate comprising W. A. Mackenzie and Company and Brent, Noxon and Company bid	92.212
Syndicate comprising Housser, Wood and Company, MacNeill and Young, and Mulholland, Bird and Graham bid	93.58

Saskatchewan.—The following is a list of authorizations granted by the local government board from May 6th to 9th, 1918:—

School Districts.—Allenby, $2,400 10-years not ex. 8 per cent. annuity; Harry Beanland, Wynot P.O. Golden Valley, $2,200 10 years not ex. 8 per cent. annuity; Wm. Isaacs, Ponteix. *Salvador, $600 10-years not ex. 8 per cent. annuity; James W. Whittaker, Salvador.

Rural Telephone Companies.—Bruce, $8,800 15-years not ex. 8 per cent. annuity; A. J. Hindle, Assiniboia. Last Chance, $1,000 15-years not ex. 8 per cent. annuity; James Wiggins, Grenfell.

The following is a list of debentures reported sold from May 6th to 9th, 1918:—

Rural Telephone Companies.—Hillburn, $3,400; Messrs. Nay and James, Regina.

---

*Being sold by the local government board.

INTEREST PAYMENT ON VICTORY LOAN

The first semi-annual interest payment on the Victory Loan is due on June 1st. The interest on the $150,000,000 at 2¾ per cent. for the half-year will be $4,125,000. As interest coupons are not attached to the temporary certificates, the exchange of these for the definitive bonds must be completed before that date.

ONTARIO ISSUE SOLD AT HIGH FIGURE

The $3,000,000 bond issue of the province of Ontario has been awarded to a syndicate, comprising Messrs. R. C. Matthews and Company and A. Jarvis and Company, of Toronto, and Messrs. Hanson Brothers and C. Meredith and Company, of Montreal, at 99.49. The issue runs for ten years, and the rate of interest is 6 per cent.

The other leading bidders are as follows: Morrow and Jellett, Burgess and Company, Canada Bond Corporation and Greenshields and Company, at 99.381; Brent, Noxon and Company and W. A. Mackenzie and Company, at 99.321; Dominion Securities Company, A. E. Ames and Company and Wood, Gundy and Company, at 99.277; Osler and Hammond, at 98.863; G. A. Stimson and Company, at 97.53.

NEW CANADIAN FINANCIAL COMPANY ORGANIZED

A new Canadian company has been organized under the name of Aldred and Company, Limited, to act as investment bankers, and also fiscal agents for various companies here and abroad.

The company will be prepared to participate in financing corporations both in Canada and the United States, and will have the benefit of the extensive affiliations developed by Messrs. Aldred and Company, operating in New York, Paris and elsewhere. The firm of Aldred and Company has been prominently identified with many large corporations, both here and in the United States, and has had a very successful record. The organization of the new Canadian company will tend to facilitate still further the development of Canadian enterprises along the lines of those in which its principals have been interested for many years.

The company, it is added does not intend to engage in transactions which properly lie within the purview of chartered banks or stock exchange firms.

It will have at its head Mr. Howard Murray, well known as vice-president of the Shawinigan Water and Power Company, and more recently engaged in connection with the work of the Imperial Munitions Board at Ottawa.

The officers and directors of the company are as follows: President, J. E. Aldred; vice-president and treasurer, Howard Murray; secretary, H. Geoffrion; directors, J. E. Aldred, Howard Murray, Sir Herbert S. Holt, H. J. Fuller and Morton Otis.

Less than half the tillable land of European Russia, remaining in control of the Bolshevik Government, will be cultivated this year. The cause it attributed to the general unrest among the peasantry, and the shortage of seeds, horses and implements. This, of course, is not the most productive section of Russia, as Ukraine, which is now independent, has always produced the most grain in proportion to its size and population.

Exempt from Dominion Tax

It is good business to increase your holdings of Victory Loan Bonds, because the security is of the highest quality, the income return attractive, and you are not required to pay Dominion Income Tax.

IRRIGATION FARMING

Irrigation Policy Justified—Extensive Rather Than Intensive System Required

BY G. R. MARNOCK.

Irrigation farmers in the Lethbridge, Coaldale, Magrath and Raymond Districts, have done well during the past year. Their crops of alfalfa and hay were good and were harvested in excellent condition. For such of these crops as were not fed on the farm and then walked off on the hoof, a good market at high prices has been available.

Success of the Irrigation Project.

As the irrigation farmers who came here during the past ten to fifteen years have become better established, they have increased their holdings of livestock, and they now find that their pioneer efforts are being well repaid. Most of them made the mistake of buying too much land, and they had a hard struggle to make payments on higher priced irrigated land which their limited labor force could not put under cultivation fully under irrigation. The present period of high prices for agricultural produce of all kinds enables them to take the fullest advantage of all their holdings by growing grain on acreage not brought under irrigation, and alfalfa and hay crops on the more fully developed irrigated land; and while the bye-product of the grain fields provides cheap feed through the stubble and from the straw stacks, the alfalfa and hay provide pasturage and succulent feed for their hogs, sheep and cattle.

Those same circumstances have been very advantageous to recent purchasers of irrigated lands, of whom there has been quite a considerable number this year. Their first broken land has gone under grain which has brought them excellent returns; and as the cultivation under grain provides both revenues and a proper means of preparing the land for irrigated crops, they have been very fortunate as to their choice of a time for settling here.

During the year practically all of the remaining land under the Alberta Railway and Irrigation project has been sold, and there will be a considerable accession of practical irrigation farmers in 1918 to the Lethbridge Irrigation District, which has consistently shown good results under that method of intensive cultivation.

Crops on Irrigated Land.

The general average crop of alfalfa on irrigated land ran from four to four and a half tons per acre. Timothy yielded one and a half to two tons. Both of these crops were harvested in good condition, and there has been a ready market for so much as could be spared for sale outside of this immediate district. Potatoes on irrigated land yielded from six to eight tons per acre, and the prices realized have been very good.

Extension of Irrigation.

The above remarks regarding the successful pursuit of irrigation farming in this district, in which climatic and soil conditions have proved so favorable, lead naturally to some consideration as to the best uses to which diverted waters may be put. In an address at the 1917 convention of the Western Canada Irrigation Association, the minister of agriculture for Saskatchewan, Hon. W. R. Motherwell, made some interesting remarks on the factors that limit agricultural production in various countries; in some the extent of the land itself is the limiting factor; in others the possibility of applying fertilizer; in others labor; while in a great part of our western prairies, particularly the southern portions of Alberta and Saskatchewan, moisture is the limiting factor. Farmers using dry-farming methods carry over this year's moisture to next by summer-fallowing; but a farmer having irrigation water available can rotate his crops and farm his land continuously. Mr. Motherwell mentioned the enormous advantage that would accrue to any farm in these areas if even a small acreage of each farm could be irrigated so as to ensure steady crops of alfalfa and pasture grasses.

This same view having been indicated many a time to the writer in the course of his talks with various farmers, he had prepared a short memorandum on the subject during 1916, raising the question generally as to whether we were guiding ourselves well as to the disposal of the limited amounts of water that are available for irrigation by diversion from our rivers and streams. A preliminary enquiry on this subject seems to indicate that it may be possible to carry some of the proposed diversions to greater distances than might have been originally contemplated, so as to serve a much greater territory with smaller amounts of water, rather than to concentrate our irrigation facilities in a broader, but less extended area. This latter is the practice that has been followed up till now, and all the engineering and economic considerations involved have hitherto pointed to that being the only feasible means for using available diverted waters. But our experience during the years of development points to the necessity for using all of our advantages for the greatest service of the greatest number. In other words, if a certain amount of water can be delivered to a much greater number of farms, it would seem to be better to do so than to deliver greater amounts of water to a smaller number of farms in a more concentrated area. Of course, it is at once apparent that the construction of longer ditches would make the per acre cost greater; but the universal desire of farmers who have no irrigation is to have water for a small area; and the greater cost per acre irrigated would not be such a drawback as might at first sight appear, particularly if it were arranged that the water allotted to each farm could be used on any part of the acreage; because this would enable a farmer to make rotations of his crops on different parts of his farm.

Lethbridge Northern Project.

It may be found upon investigation that the water which the Irrigation Branch of the Department of the Interior has shown to be available from the Old Man River above Macleod for this project may be used to greater advantage for established farmers and for the country generally, by spreading it, as indicated in the above discussion, to a much larger number of farms than had been contemplated originally. No doubt this matter will engage the attention of the irrigation branch in their further investigations regarding this project.

The same considerations will also doubtless guide the further investigations that will be made regarding the proposed distribution of diverted waters to the large areas that preliminary surveys have shown may be brought under irrigation in the districts to the south and east of Lethbridge.

It is essential for the best interests of the future development of this district, the productive quality of the soil of which has been so amply demonstrated, that there should be no cessation of the important work of continuing research into the engineering and economic possibilities for making the greatest use of such waters as may be available to be spread over the land.

Taber Project.

It was hoped that this project which provides for making use of the spill waters from the Alberta Railway and Irrigation Company's irrigation district, by carrying that water to irrigate some seventeen thousand acres of land near Barnwell and Taber, might have been gone on with in 1917, but no start has yet been made on this work. No great engineering work is required, and it should be possible to arrange the business details to enable the work to be carried through during 1918.

More Extensions Required.

The Lethbridge Northern project was originally designed to cover about 100,000 acres in a compact area, each farmer to take irrigation water for all of his land that would come "under the ditch," and would have cost about $23 per acre. But many farmers would prefer not to have all their land under irrigation, even at this low cost, because not experienced in this line of work.

Whereas hardly a single farmer would not welcome enough water to have, say, one-fourth of his land under irrigation, so as to grow alfalfa, clover and grasses; to have more feed and water for his live stock. For this he would be willing to pay much more per irrigable acre.

It is believed by some that the water could be carried to a very great many more farmers, giving each a little. The cost per acre would be greater, but they would be willing to pay up to even $40 per acre for this privilege for small areas.

If anything like 100,000 acres could be watered at something like that figure a capital sum of $4,000,000 would be required. Irrigation associations would be formed, so that land could be bonded just as a city bonds itself, repaid by taxation and sinking fund, or amortization plan over 25-40 years, splendid security, and should get a comparatively low

rate interest in normal times, and be a desirable and easily marketable security.

The Canadian Pacific Railway have sold all their irrigated land around Lethbridge, the latest sales being at $65 an acre; allowing even $25 for the land, the added value for irrigation represents $40.

This is for future consideration. Material is high, labor is high, money is high, just now. But as a Lethbridge old-timer says, "When this western country moves it moves fast." There are also further possibilities for Mr. E. F. Peters, commissioner of irrigation, has shown that waters are available for over 500,000 acres in the region to the south and east of Lethbridge.

TORONTO BREAKWATER TO BE COMPLETED

The Dominion government has decided to vote the sum of $150,000 for Toronto harbor improvements during the current year. A delegation recently waited on the government regarding further expenditures on Toronto harbor, and particularly emphasized the fact that if the breakwater were not completed over $1,000,000 worth of work might be lost. The government, accordingly, has voted a sum sufficient to complete this part of the work.

A PLAN TO ENCOURAGE SMALL SAVINGS

The Dominion government is preparing a plan to raise money by war savings stamps, similar to the method used in the United States and in England. A special committee of the Canadian Bankers' Association is now inquiring into the situation. It is proposed that in Canada the system will be operated by the banks as is done in the United States. In England it is operated through the post-office. The principal objection in Canada has been the shortage of help in the banks.

The object is not only to raise money by this means, but also to encourage thrift. A blank book will be issued to applicants in which stamps may be inserted from time to time. When sufficient have been accumulated, the owner may purchase with them a war savings certificate. The system of war savings certificates has met with considerable success in Canada, but the predominating demand for the $100 certificates would indicate that small savings have been reached only to a comparatively small extent. The total amount of war savings certificates issued so far has been $12,893,734.90. The certificates are available through the post-office department and through the department of finance. It is by direct arrangement with the department of finance that the system of having employers encourage the purchase of these certificates has been applied. The post-office department has realized a total of $3,094,950.80, and the department of finance $9,798,784.10. Certificates have been redeemed to $874,224.75, so that the balance outstanding is slightly over $12,000,000.

The number of certificates outstanding as at May 11th, 1918, is: $10 certificates, 7,714; $25 certificates, 51,239; $50 certificates, 21,032; $100 certificates, 125,830; total, 205,815.

Another form of raising funds adopted by the government comparatively early in the war, was that of debenture stock. This stock bore 5 per cent. interest and might be turned in in subscription for war loans. The stock might, and may still, be purchased at any time, and one of the main objects of its issue, was to insure to a certain extent the success of the war loan. There have been 1,900 debenture stock certificates issued with a total value of $10,191,000. As the interest rate is considerably below the rate obtained on ordinary war loan, most of the debenture stock has been exchanged, the amount outstanding at present being $3,231,000.

Judging from the results of the war savings certificates, and of the debenture stock, the total result of a war saving stamp campaign could not be expected to form a very large proportion of the total borrowings. Moreover, the expenses of operation are high. On the other hand, the savings in this way represent, generally speaking, sums which would not be obtained otherwise, and on this account has been favored in England and United States as a part of the thrift campaign, as well as for its purpose of raising public funds.

Official reports from Washington state that the sugar crop for the year in British India was the highest on record, amounting to 3,220,000 tons.

FROST DAMAGE IN WEST NOT SERIOUS

Reports of probable damage of an extensive character to the growing grain in western Canada do not seem to be borne out in the weekly crop report of the Canadian Northern received a few days ago, bearing upon the developments in the territories served by its lines in Manitoba, Saskatchewan and Alberta.

Only 18 of the 279 agents reported serious frost, and of these but five indicated any damage from it. Only 17 reported real high winds and but 12 of these indicated any damage, and but six agents reporting reseeding on that account in the tributary areas.

It is possible that cool weather not permitting of rapid growth in some localities has been the means of preventing damage from either, high winds or frost along the Canadian Northern Railway. It is certain the rolling, wooded character of the northern areas served by the company affords a measure of protection of significance in itself.

Of the agents reporting, 94 gave wheat well above ground and doing well, while some 50 reported conditions as excellent. The report shows that oats seeding was in progress at 134 points and barley at 42.

SECURITY PRICES STEADY IN NEW YORK

Messrs. Spencer, Trask and Company, of New York, comment in their market letter of May 1st, on the recent Liberty Loan as follows: "It is pleasant to note that this successful result will have been accomplished with signal absence of liquidation in securities, a feature which figured so disagreeably in former loans. As a matter of fact, the average of both bonds and stocks is now even a trifle higher than on April 6th, when subscriptions to the new loan opened. Insofar as railroad securities are concerned, their steadiness has been all the more noteworthy, since the proposed contract, as recently submitted, between the government and the railroads was a distinct disappointment, the contract failing in several important respects to measure up to what the railroads felt they had a right to expect."

They also point out that before the war, approximately 40 per cent. of the turnover on the New York Stock Exchange was in railroad securities, while now they represent only about 10 per cent. Business in general is reported as fairly good and crops promise to be satisfactory. The acreage seeded is stated to be much larger than usual, and conditions of the soil are reported to be excellent. The increased cost of labor and the difficulty of obtaining raw supplies is causing the need for retrenchment in cost of production to be felt.

COAL PROSPECTS FOR THE WINTER

In the "Bache Review," for May 18th, attention is called to the fact that a worse coal shortage than that of last year is quite possible this year. It is pointed out that production in the early part of the year was held back by the establishment of a price at the mines so close to actual cost, that many coal sources were closed. Then came the car shortage which effected distribution. At the present time both car shortage and labor shortage are obstacles to production, and opinions of operators in the great coal areas east of the Mississippi, which furnishes more than 90 per cent. of the country's bituminous coal, are almost unanimously to the effect that the coal shortage next winter will be worse than that of last winter, unless the mines are furnished sufficient cars to enable them to increase materially their present rate of production. In fact, in many localities it is shortage of labor that has been the trouble all along, and not the lack of cars. The mine owners of West Virginia recently stated that the trouble in that state was that the miners were getting such large wages that they would work only a few days a week, and efforts to remedy this situation do not appear to have been successful. It is added that increases in price seem to be necessary to offset the increases in the cost of labor.

In view of the partial dependence of Canada upon the United States for coal, and the almost complete dependence of the province of Ontario, the coal position is extremely serious, and quite apart from the element of increased railway rates, there seems to be every prospect of still higher prices prevailing.

PROGRESS OF ST. JOHN

Increase in Exports and Imports—New Local Industries—Agriculture in New Brunswick—St. John Harbor

The Board of Trade Journal of St. John, New Brunswick, for April, 1918, contains a record of the progress of that city, and of the province of New Brunswick. The exports from the city of St. John for the fiscal year ended March 31, 1918, were over $20,000,000, or an increase of $10,000,000 over those for the previous year. The imports, which amounted to $16,787,200, were an increase of about $1,000,000 over the year 1914. The total trade was just a little more than $36,000,000. The enormous increase during the past four years is largely due to the fact that St. John offers the quickest route to the sea of any winter port on Canadian soil.

The grain exports through the Canadian Pacific Railway elevators at St. John for this season, up to April 15, reached a total of 16,500,000 bushels, an increase of 500,000 bushels over the figures for 1916-17. The arrivals and clearances of vessels for the year total 5,526 with a total tonnage of over 3,800,000. The customs receipts amounted to $3,333,982, a small increase over those for the previous year.

New Industries for St. John.

The first sardine packing plant to be established in St. John is now being erected by the Booth Fisheries Company, of Chicago. The plant will cost about $75,000, and will be capable of packing 100 hogsheads of fish per day. It is expected that 150 workers will be employed. The sardine industry of the Bay of Fundy originated about 30 years ago, the town of Eastport being its first home. It has now spread to a number of towns on both sides of the bay, and the presence of a factory at St. John may also lead to the erection of weirs farther up the bay. The industry is also carried on extensively on the coast of the state of Maine, although most of the fish packed in the factories there, come from the New Brunswick side.

The McAvity machine plant in St. John is being enlarged by the construction of a reinforced concrete and brick building to be used as a moulding shop.

In view of the increased activity of St. John harbor, it is being urged that it should to taken over by a commission appointed by the Federal government. One of the reasons proffered by the harbor committee of the St. John board of trade, why this should be done, is that its development as a national port must eventually place a greater burden upon the city than it can bear. The city has not obtained a large revenue from the port, and it has been necessary to keep it well equipped because of competition and this financial burden should be lifted off the shoulders of the city in order that it may devote the proper attention to its purely municipal functions. It is also pointed out that this is in line with modern ideas of harbor management, and will better enable the facilities of the port to be used by the Transcontinental lines of railway. The advantages of having it in the hands of a commission free from partizan influences, and with a permanent policy, are also described. By action of this kind about $2,000,000 of the city debt would be transferred to the shoulders of the committee, relieving the city of about 2/5 of its present burden. It is also stated that the harbor committee of the board has been assured by the Federal representatives who have been concerned in the negotiations, that certain expenditures would not become a charge upon the traffic of the port, that the charges would not increase beyond those of competitive ports and that none but the best men would be named as commisioners.

Conditions in New Brunswick.

The agricultural production of New Brunswick for the year 1917 was somewhat short, bad weather being indicated as the cause. The production of butter decreased, but the production of cheese increased. The wheat, oat, turnip and potato crops were less than for the year 1916. although the acreage sown in wheat and planted in potatoes was more for that year. The iron, antimony, tungsten and copper mines of the province ceased production during the year, and gypsum developments were hampered by lack of transportation. Oil and natural gas are, however, being developed to a considerable extent. The city of Moncton is provided with gas and gas tanks and gas forges of the Canadian Government railways are supplied from this source. The coal mining industry also received an impetus during the year as a result of the United States fuel conditions, but some difficulty was experienced by lack of labor.

The territorial revenue of the province for the year amounted to $549,565, being an increase of over $6,000 compared with that of the previous year.

NEW INSURANCE APPLICATION FORM

The Canada Life Assurance Company has recently prepared a commercial protection policy specially adated to business and partnership insurance. They have also adopted an application form in which is included the following question: "Is the insurance hereby applied for intended to replace in whole or in part, any insurance held by you in another company; if so, state name of company?" The purpose of this clause is to prevent a policyholder from losing by transferring his business from one company to another. The Canada Life points out that it is a frequent occurrence for Canadian companies to receive letters from other home offices in Canada and the United States advising that some applicant has stated that he is taking a policy in order to replace one he has with a Canadian company. It is desirable that agents should not encourage the "twisting" of business, as this almost invariably results to the disadvantage of the policyholder.

This company has also prepared a new table of rates based upon $50 or $100 premium as a unit. Therefore, instead of suggesting a $1,000 or $2,000 policy, an investment of $50, $100, $200 or more per annum can be suggested, and the amount of insurance which may be purchased by such an annual outlay, can be quoted at once.

EMPLOYMENT OF WOMEN IN BANKS

Summarizing information received from 65 city banks, women are generally working on the same salary basis as men, though there are a few exceptions. The usual method of hiring men is to take them in as messengers or office boys, and start them on the difficult upward path cashierwards. The new class of women employees are put at once upon routine work of a better class and at a higher wage. There is no reason why they, too, should not also plod their way cashierwards.

At the present early period of the feminine incursion women are found to be successful at remittance, statement and machine work (the operation of adding machines, addressographs, statement machines and typewriters) and bookkeeping. With a woman's greater tact she should be especially successful in meeting the public—window work of various kinds—though this involves a much more thorough banking experience than most of them now possess. The field of stenography has always been left largely to women, due probably to their greater respect for the appearance of the typed page, and a better training in English. With a greater variety of opportunities now opening, it will be interesting to observe whether this class of employee will care to strive for positions carrying a greater responsibility.

Bank work in some departments requires considerable physical and nervous endurance, and subjected to this strain men are naturally superior. They have been found to be able to work more efficiently and faster under pressure, and for this reason more women than men are required in these departments in the large banks. The proportion is about three to two, though some banks place it at five to four and others four to three. In positions that do not present these tense intermittent demands, the work of women is generally equal to that of men in quantity and quality, and is sometimes better.

On the whole, the employment of women in banks has been successful. Women applicants for positions usually have the advantage of men in education. The 20 largest banks in Minneapolis, St. Paul and Duluth employ 1,613 clerks. Fourteen of these banks report that the general educational qualifications of women applicants for positions are higher than those of men applicants; four report that they are about the same or no higher; two do not answer on this point. Local bankers may be interested in knowing that 65 banks in the three cities mentioned are at present employing 1,910 clerks. 599 of these are women.—Northwestern National Bank Review, Minneapolis.

DIVIDENDS AND NOTICES

BANK OF MONTREAL

Notice is hereby given that a Dividend of Two-and-One-Half per Cent. upon the paid-up Capital Stock of this Institution has been declared for the current quarter, also a Bonus of One per Cent., both payable on and after Saturday, the First day of June next, to Shareholders of record of 30th April, 1918.

By Order of the Board.
FREDERICK WILLIAMS-TAYLOR,
General Manager.
Montreal, 23rd April, 1918.

UNION BANK OF CANADA

AGRICULTURAL CONDITIONS IN CANADA

Fall Wheat, Hay and Clover Partly Winter Killed—Spring Wheat Prospects Good

Ottawa, May 14, 1918.—The Census and Statistics Office issued to-day a report on the area and condition of fall wheat, the condition of hay and clover meadows and the progress of spring seeding, as compiled from the reports of crop correspondents at the end of April.

Winter Killing and Condition of Fall Wheat.

The winter killing of fall wheat in Ontario is reported as especially severe. It is estimated to amount to 56 per cent., which reduces the acreage under this crop in Ontario from 630,200 acres, as sown last fall, to 277,200 acres, the area to be harvested. This is the largest proportion of fall-wheat winter-killed in Ontario and the lowest acreage left for harvesting since the records were begun in 1909. In Alberta the percentage winter-killed is estimated at 10 per cent., thus reducing to 55,260 acres the area of 61,400 acres sown last fall. For the whole of Canada the area sown—viz., 711,000 acres, is reduced by 51 per cent. to 348,670 acres. The condition of fall wheat on April 30 is also the lowest on record—viz., 52 per cent. of the standard for Ontario and 59 per cent. for all the fall wheat provinces. Converted into a standard of 100 as representing the average condition on April 30 for the nine years 1909 to 1917, the condition of fall wheat for Canada on April 30, 1918, indicates a yield per acre of 71 per cent., or 29 per cent. below the average of the past nine years.

Hay and Clover Meadows.

About 11 per cent. of the area under hay and clover is reported as winter-killed, as compared with 9 per cent. last year. The condition in percentage of the standard representing a full crop is 84 for all Canada as compared with 86 last year. For the provinces the percentages are as follows: Maritime provinces, 92-96; Quebec, 86; Ontario, 78; Manitoba, 70; Saskatchewan, Alberta and British Columbia, 90-93.

Progress of Spring Seeding.

With an early spring, excellent progress has been made with seeding. For spring wheat in Manitoba 94, in Saskatchewan 85 and in Alberta 92 per cent. of seeding was estimated to be completed by the end of April. These proportions are higher than in any recent year, excepting 1915, and compare most favorably with last year, when for the prairie provinces the proportions only ranged from 5 to 27 per cent. For the six provinces to which the report applies—viz., Quebec, Ontario, the prairie provinces and British Columbia, the proportion of spring wheat seeded by April 30 is 66 per cent., as compared with 13 per cent. last year, 27 per cent. in 1916 and 94 per cent. in 1915. Good progress has also been made with the seeding of oats and barley, the proportion for the six provinces being for oats 24 per cent., as against 12 per cent. in 1917 and 8 per cent. in 1916, and for barley 20 per cent., as compared with 9 and 3 per cent. in 1917 and 1916. The following telegram from the Saskatchewan department of agriculture was received to-day (May 14): "Wheat seeding is completed; 40 per cent. of oats seeding done. No lack of moisture except in parts of west central district. Ten to 15 per cent. increase in spring ploughing. High winds reported but no damage to crop."

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first two weeks in May:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
May 7	$3,065,000	$3,033,000	—$ 32,000
May 14	3,123,000	3,109,000	— 14,000

Grand Trunk Railway.

May 7	$1,135,091	$1,434,727	+ $299,636
May 14	1,356,646	1,480,903	+ 124,257

Canadian Northern Railway.

May 7	$ 734,500	$ 827,500	+ $ 93,000
May 14	882,000	857,300	— 24,700

NIPISSING MINES COMPANY, LIMITED

The annual report of the Nipissing Mines Company, Limited, for the year ended December 31, 1917, shows a very successful year's business, 4,212,000 ounces of silver being produced, and the net receipts being approximately $2,700,000. The statement of revenue and expenses is briefly as follows:—

Gross value of ore produced	$3,756,889.77
Other receipts	71,420.88
Total	$3,828,310.65
Mining and other expenses	1,129,408.37
Net receipts	$2,698,902.28

Dividends amounting to $1,935,000 were paid, and after allowing $12,430.46 for the cost of special investigations, the net surplus is $2,731,598.69. Since 1906 the company has paid over $16,000,000 in dividends, or 269 per cent. on the par value of the stock.

IS KILLING AN ACCIDENT?

An interesting judgment was recently rendered by a Virginia Court on a case of accident insurance. A negro in Richmond, shot and killed his father, claiming that he mistook him for a burglar. He was acquitted of crime. The Standard Accident Company had a policy of $5,000 on the father and, not being satisfied, denied liability in the local courts. The insurance company undertook to prove that the son had threatened his father's life within three days of his death. The plaintiff claimed that, even if that question could be proven, it did not place the case beyond the range of an accident, and the Court upheld this contention.

The capital stock of the Massey-Harris Company is to be increased from $15,000,000 to $25,000,000. 100,000 new shares with a par value of $100 each, will be issued, it is stated.

Victory Bond Holders

Your coupons which are to be paid on June 1st can be used to the best advantage—by making further purchases of Victory Bonds.

A further purchase with your coupon money, means compound interest on your original investment.

If the amount you receive from your coupons is not sufficient to pay for a new purchase in full—use our Partial Payment Plan—your coupons accepted in payment for purchases.

ANNOUNCEMENT

To the Policyholders of the Mutual Life Assurance Company of Canada, and others whom it may concern

The Board of Directors of the Mutual Life of Canada deeply regret to announce the death, on May 1st, of the Managing-Director of the Company, Mr Geo. Wegenast, F.A.S., after thirty-eight years of faithful and devoted service, the last twenty years as the chief officer of the Company, and they desire hereby to record their deep appreciation of the value of his services to the institution with which he was so long and happily associated

To fill the vacancy caused by Mr Wegenast's death, the Directors have appointed as General Manager the former Secretary of the Company, Mr Charles Ruby, who has been connected with the Mutual Life of Canada for thirty-four years, and intimately associated with the management for the past eleven years.

In making the appointment the Directors believe that their action will be heartily endorsed by the policyholders, whose interests alone have guided them in their choice of a successor to the late Mr. Wegenast. Mr. Ruby's long association with both the former managers is an assurance that the affairs of the Company will be carried on upon the same progressive and conservative principles that have controlled the policy of the Company during nearly half a century of steadily increasing usefulness.

E. P. Clement
President

Waterloo, Ontario, May 15, 1918

The Mutual Life
Assurance Company of Canada

The New York State Industrial Commission, through Mr. Wm. S. Coffey, secretary, has announced that under the 1918 amendments to the workmen's compensation law, which became effective on May 12th, all employers of four or more workmen, regularly engaged, must take out compensation insurance on these employees. Employers who neglect to take out compensation insurance are liable to both civil and criminal prosecutions.

$2,000,000

Province of British Columbia

10-Year 6% Gold Bonds

Sealed Tenders, endorsed "Tenders for Province of British Columbia Bonds," addressed to the undersigned at the Canadian Bank of Commerce, Head Office, Toronto, Ontario, will be received for the purchase of $2,000,000 (Two Million Dollars) Ten-year Gold Bonds of the above Province, dated 1st June, 1918, due 1st June, 1928, bearing interest at the rate of 6% per annum, payable half-yearly on the 1st June and 1st December. Principal and interest payable in gold at the Canadian Bank of Commerce, Victoria, B.C., Toronto, Montreal, and at the Agency of the Canadian Bank of Commerce in the City of New York, U.S.A., at the option of the holder.

Bonds to be in denominations of $1,000, $500 and $100, in amounts to suit the purchaser, with coupons attached, and may be registered as to principal only.

Payment for Bonds, with accrued interest to date of payment, to be made at the Canadian Bank of Commerce, Victoria, B.C.

Full payment at Victoria, B.C., on delivery of interim securities.

Interim Certificates will be supplied to be exchanged for Definitive Bonds on completion.

Tenders to be addressed to the Honorable John Hart, Minister of Finance for the Province of British Columbia, care of Head Office, Canadian Bank of Commerce, Toronto, Ontario, and delivered not later than noon on Tuesday, the 28th day of May, 1918.

Each tender must be accompanied by a marked cheque for $50,000.00. The cheque of the successful bidder to be retained and applied as part payment for the Bonds; other cheques to be returned immediately.

The highest or any bid not necessarily accepted.

JOHN HART,
Finance Minister, British Columbia.

Toronto, May 22nd, 1918.

GRAND TRUNK PENSIONS EMPLOYEES

According to a report from the Grand Trunk Railway Company, dated the 16th instant, 14 men were retired from active service under the company's pension plan for the month of May. The total number of officers and employees pensioned is now 14,047. The average service of the men retiring is 35 years, and eight of the 14 mentioned above have been with the Grand Trunk for more than 40 years.

The Secret of a Wonderful Success

The rise and progress of The Mutual Life of Canada has been one of the romances in the history of Canadian Finance. Less than half-a-century ago a small group of men in an obscure Ontario town determined to establish a Life Insurance Company that would give the public the maximum of service at a minimum of cost. That being the aim it was resolved that the organization should be purely mutual. Five hundred prospective policyholders were gathered and formed the nucleus of the Company. From this small beginning in 1870 the Company has gone forward steadily with more regard to security and mutual serviceableness than big business. The result is that the Company to-day is enjoying a popularity that is phenomenal, writing during the past year more than $20,000,000 paid for assurances.

AS GOOD AS THE WHEAT

Over 65,000 persons in Canada have arrived at the conclusion that the GREAT-WEST LIFE can give them the best possible value in Life Insurance—a "No. 1 Hard Policy."

Not through lavish advertisement, or the lapse of many years, has the Company attained its reputation, but solely through the attractiveness of its Policies.

Over $155,000,000 of business in force is the record for twenty-five years.

As the standard of profitable Life Insurance, GREAT-WEST POLICIES are well said to be "as good as the wheat."

Information on request.

Steamer Muriel W., Limited, $10,000; Wm. Q. Stobo, H. C. Thorn, C. St. J. Griffis. Canadian Ferro Alloys, Limited, $250,000; L. Macfarlane, Gordon-Walters MacDougall, William-Bridges Scott.

Montreal, Que.—Fairfax Forgings, Limited, $1,500,000; L. A. David, L. P. Crepeau. Aldred and Company, Limited, $1,000,000; J. E. Aldred, H. J. Fuller. Canadian Buttons, Limited, $25,000; M. Goldstein, J. A. Engal. Desjardins, Limitée, $49,000; M.M. A. Desjardins, L. Desjardins. L-H. Cantin and Compagnie, Limitée, $10,000; F. Pauze, J.-Arthur Beaudoin. Hannans, Limited, $20,000; M.M. C. M. Cotton, F. T. Enright. Masterman, Limited, $99,000; M.M. C. H. Skelton, R. C. Stevenson, A. W. Knowles. Laurence and Robitaile, Limitée, $20,000; J. Laurence, E. Charron.

Toronto, Ont.—Canadian Guide to Bonded Lawyers, Limited, $40,000; A. E. Wilson, M. Cumming, M. J. Martin. Dixie Produce Company, Limited, $40,000; W. E. Caldwell, N. I. Caldwell, M. Caldwell. Hallman Company, Limited, $40,000; A. B. Elder, W. F. Hallman, S. Elder. Lookout Mines, Limited, $40,000; A. Rowland, N. D. Tytler, R. K. Sproule. Swan Lake Farm, Limited, $50,000; J. F. Gundy, H. W. Gundy, G. S. Bell. Oppenheimer Casing Company of Canada, Limited, $5,000; A. L. Reid, K. D. Mackenzie, W. W. Perry. Sunbeam Chemical Company, of Canada, Limited; G. H. Gilday, M. P. Procter, L. Flynn. Petroleum and Gas Products, Limited, $1,000,000; G. J. Valin, F. Woods, F. W. Rogers.

INCREASE IN BRITISH TRADE

The board of trade figures for the month of April show an increase in imports of £35,300,000 over the same period of last year, and an increase also in exports of £4,272,000.

The principal increases in imports were:—

Food	£16,000,000
Cotton	3,000,000
Manufactures	13,000,000

The principal increases in exports were of cotton manufactures.

LARGE OIL WELL IN DOVER TOWNSHIP

The Union Gas Company has bought in an oil well in Dover township which, it is estimated, may develop four to five hundred barrels a day. A definite estimate cannot be made yet, because a rather heavy gas pressure is throwing a stream of oil almost as high as the derrick. Efforts are being made to quickly control the well. This well is down 3,275 feet, which is the lowest drilling in the county, and lower than the Bothwell and Lambton field. A well just 600 feet from this one is down less than 3,000 feet. It developed gas very strongly at first, and later turned to oil, the flow of which reduced some, but is still fairly strong. The Dover field is a comparatively new one, which the Union company is exploiting, following the reduction in the gas pressure in the Tilbury field.

RAND GOLD OUTPUT

The output of gold at mines of the Rand in April was 717,099 fine ounces, valued at £3,046,045. In March the outturn was 696,281 fine ounces, valued at £2,957,614. The following table gives the output of gold and the total value at the Rand (in fine ounces) for the first four months of the year, with comparisons:—

Output—	1918.	1917.
January	714,182	782,634
February	659,759	721,321
March	696,281	787,094
April	717,099	742,778

Value—	1918.	1917.
January	£3,033,653	£3,324,418
February	2,802,477	3,063,976
March	2,957,614	3,343,363
April	3,046,045	3,155,121

PROVINCIAL AND MUNICIPAL BONDS

Including the $3,000,000 Ontario issue just made, almost $10,000,000 of Canadian provincial bonds have been sold this year. The particulars are as follow:—

1918.	Government.	Amount.	Securities.	Rate.	Term years.	Offered at %
Jan.	Saskatchewan	$ 630,000	Gold bonds.	5	15	6½
Jan.	Manitoba	1,000,000	Gold bonds.	5	2	6¼
Jan.	Manitoba	1,000,000	Gold bonds.	6	10	6¼
Feb.	New Brunswick	1,000,000	Coupon gold bonds.	6	10	6⅛
Feb.	Ontario	3,000,000	Coupon gold bonds.	6	10	6
May	Ontario	3,000,000	Coupon gold bonds.	6	10	6

Judging from the success of three large issues which have been placed on the market during the past two weeks, there is good sale in Canada at present for high-grade government and municipal bonds. The $346,000 Hamilton bonds, which were offered at 6 per cent., have been practically disposed of. The same is true of the $736,000 Toronto bonds offered the end of last week at the same price. Following the offering of the $3,000,000 Ontario bonds, also to yield 6 per cent., on Tuesday, the 21st inst., the syndicate reported towards the end of the day that $2,000,000 had already been disposed of, and it was expected that the issue would be entirely disposed of very shortly. Institutional buying has been responsible for a considerable proportion of the sales

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

TO AGENTS:—Write the Home Office for particulars of direct renewal contract.

According to a cable received recently by the Canadian Food Board from the British minister of food, the consumption of wheat in Canada must be reduced still further. The cable read as follows: "Wheat importations are not arriving in quantities sufficient to meet our weekly requirements. Every effort that can be exerted in Canada to increase shipments of wheat and meat will be invaluable."

The Board of Trade figures for the United Kingdom for the month of April, shows an enormous increase in imports over the figures for April, 1918. The increase in imports was £35,300,000 and in the exports £4,272,000. The principal increases in imports were in food, raw cotton and manufactures, while the principal increases in exports were in cotton manufactures.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Agincourt, Ont.—May 19—Barn of Ira Gooderham, and a herd of dairy cattle were destroyed.

Arnprior, Ont.—May 21—Lumber yards of Lachlin Brothers, containing 2,000,000 feet of rough lumber, were destroyed. Estimated loss, $75,000.

Belleville, Ont.—May 21—Choir loft of St. Michael's Church was damaged.

Brockville, Ont.—May 20—Large cottage at Devil's Lake, owned by Wright Brothers, was damaged. Estimated loss, $2,000.

Carlevale, Sask.—May 20—The Muldoon Brothers' livery stable, Shannon's hardware store and Hoff and Jackes' warehouse were destroyed. Estimated loss, $75,000.

Edmonton, Alta.—May 17—Office of the Oliphant-Munson Mines was damaged.

Entwistle, Alta.—May 14—Principal portion of the business section of the town was destroyed. Estimated loss, $40,000.

Guelph, Ont.—May 17—Top story of the Robson Motor Car Company's building was damaged. Estimated loss, $100.

Komoka, Ont.—May 19—Thames Valley cheese and butter factory was damaged. Estimated loss, $10,000.

Lucan, Ont.—May 16—Mr. D. B. McVicar's large brick blacksmith shop was destroyed.

Pike Bay, Ont.—May 15—Mr. Dan Stewart's store was damaged. Estimated loss, $3,000.

Scarboro, Ont.—May 18—Farm buildings of John Jarvis, near Armadale were damaged.

May 20—House of Herbert Hotchkiss was destroyed.

Toronto, Ont.—May 18—Building of Lyman Brothers, 183 Front Street E., was damaged. Estimated loss, $2,000.

Trout Mills, Ont.—May 16—Town pump-house was damaged after struck by lightning.

Stratford, Ont.—May 17—Frame mill of the Sebringville Flax Company was destroyed. Estimated loss, $25,000.

Winnipeg, Man.—May 15—Building occupied by Richardson and Bishop was damaged. Cause reported as incendiarism. Estimated loss, $150,000. The Clifton school building was damaged. Estimated loss, $500.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Ottawa, Ont.—April 25—The premises of the Victoria Foundry Company were damaged. A total insurance of $118,000 was carried. The following companies are interested: Union of Paris, $5,000; New York Underwriters, $5,000; Niagara Fire, $5,000; Century, $5,000; Palatine, $7,500; Nova Scotia, $5,000; Globe and Rutgers, $7,500; National, $10,000; National-Ben Franklin, $2,500; Mount Royal, $5,000; North-West National, $5,000; Springfield, $5,000; Phœnix of Hartford, $2,500; North-West Fire, $10,000; Liverpool and Manitoba, $10,000; Queen, $5,000; Fidelity-Phenix, $2,500; Norwich Union, $5,000; Rochester Underwriters, $4,000; General, $5,000; Union of Canton, $6,500.

BRITISH COLUMBIA BOND ISSUE

The British Columbia government has decided to ask for tenders for $2,000,000 of gold bonds, bearing interest at 6 per cent. and running for ten years. The money is being raised to liquidate outstanding obligations, including some incurred on account of the purchase of the Great Eastern Railway, and for which advances were made to the government by the banks. The last bonds of this province to be offered in the market, which was some months ago, were offered on a 6½ per cent. basis. An advertisement for tenders appears on another page of this issue.

The 8th Austrian war loan will, it is reported, be issued shortly. The loans will carry interest at 5½ per cent. per annum, and the price will probably be 93.

DOMINION SUPPLEMENTARY ESTIMATES

On the 20th instant supplementary estimates totalling $46,957,312 were tabled in the House of Commons. This includes a vote of $37,000,000 to cover the working expenses of the Canadian government railways. Of the amount asked for, $5,170,313 is chargeable to capital expenditure.

INSURANCE INSTITUTE ANNUAL MEETING

The annual meeting of the Insurance Institute of Toronto was held on May 21st, and the nineteenth annual report presented. The various reports read at the monthly meetings during the year will be printed shortly. The membership of the Institute has shown a substantial increase during recent years, being now 465, as compared with 422 in 1913-14.

In spite of enlistments of the younger men, the educational work of the association is progressing satisfactorily. Of 22 candidates at examinations during the year, slightly less than one-half were successful. Of the Institute's members, 116 student members, and 111 active members, are at war. As their fees are remitted, the revenue for the year was somewhat less than usual.

Mr. H. C. Cox, of the Canada Life, the retiring president, becomes honorary president, and Mr. H. W. Crossin, of the Employers' Liability, becomes president. The other officers are vice-president, Mr. J. B. McKechnie, Manufacturers' Life Insurance Company; librarian, Mr. B. R. Smith, of the Confederation Life; secretary-treasurer, C. Elvins, Imperial Life Assurance Company. The council includes the past presidents and Messrs. C. W. Fuller, J. B. McKechnie, A. H. Rogers, G. C. Moore, C. S. Wainwright, A. P. Muckle, D. E. Kilgour, W. A. P. Wood, J. R. Stewart, P. C. Keys, J. G. Parker, C. A. Withers, and T. H. Hall.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent. extra if charged.

Call Loans Increase in April

Increase in Savings Deposits, in Circulation, and in Call Loans —Savings Deposits Are Again Nearing the Billion Dollar Mark— Practically Whole Banking Business Shows Gain Over Last Year.

	April, 1917.	March, 1918.	April, 1918.	Year's Inc. or dec.	Month's Inc. or dec.
Deposits on demand	$471,312,285	$561,042,236	$558,509,221	+ 18.4	— .5
Deposits after notice	874,948,724	921,080,803	933,644,668	+ 6.7	+ 1.3
Current loans in Canada	880,523,897	886,995,222	884,089,402	+ .5	— .2
Current loans elsewhere	86,058,220	102,217,679	99,267,660	+ 15.1	— 3.0
Loans to municipalities	35,931,998	50,652,061	55,685,350	+ 57.1	+ 10.0
Call loans in Canada	82,737,417	74,257,877	77,497,360	— 6.1	+ 4.1
Call loans elsewhere	159,156,054	167,296,701	179,818,531	+ 12.6	+ 7.2
Circulation	145,550,619	191,328,665	192,969,079	+ 32.5	+ .5

THE changes in the banking business for the month of April are very similar to those for March. Savings deposits, loans and circulation continue to increase, although in the case of circulation the increase is only a fraction of the increase for March. Call loans in Canada is the only item above which shows a decline as compared with last year.

The following table gives record of deposits for the past thirteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1917—April	$471,312,285	$874,948,724
May	443,839,847	892,562,657
June	449,689,670	900,510,552
July	450,849,356	929,442,340
August	443,317,275	806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013
1918—January	559,777,237	900,314,256
Februry	569,266,642	908,822,988
March	561,042,236	921,080,803
April	558,509,221	933,644,668

Demand deposits continue their decline, but savings deposits have again increased substantially. Since January the increase in savings deposits has been $33,000,000, at which rate the billion-dollar mark should be reached before the issue of the next war loan.

The course of the deposits account during the past six years is shown in the following table:—

April.	On demand.	After notice.	Total.
1913	$365,340,002	$631,160,280	$ 996,500,282
1914	350,515,993	653,679,223	1,004,195,216
1915	347,325,937	686,075,124	1,033,401,061
1916	402,060,955	748,359,957	1,150,420,912
1917	471,312,285	874,948,724	1,346,261,009
1918	558,509,221	933,644,668	1,492,153,889

While the savings deposits are far in advance of those of previous years, the gain in 1918 as compared with 1917 is not as large as the gain in 1916 or 1917. In the case of demand deposits, however, it is larger.

The trend of the Canadian loans account for the past thirteen months is shown in the following table:—

Loans.	Current in Canada.	Call in Canada.
1917—April	$880,523,897	$82,737,417
May	844,890,589	78,514,798
June	839,355,782	76,085,220
July	829,560,700	71,376,788
August	836,429,670	71,204,351
September	855,306,953	72,421,187
October	883,986,860	71,653,719
November	868,973,714	72,178,345
December	858,533,298	71,779,020
1918—January	855,506,506	76,239,201
February	859,363,147	76,722,163
March	886,995,222	74,257,877
April	884,089,402	77,497,360

Call loans in Canada for April, 1918, are somewhat smaller than for April, 1917, on account of the exceptionally high figure last year. Current loans are about the same as during March, and as a year ago.

The following table shows the call loans abroad in April as compared with previous returns:—

	1915.	1916.	1917.	1918.
January	$ 85,796,641	$134,248,552	$155,747,476	$132,687,066
February	89,890,982	139,138,651	162,344,556	160,239,494
March	101,938,685	141,889,989	161,616,735	167,296,701
April	121,522,071	147,146,443	150,156,054	179,818,531
May	136,098,835	163,400,659	168,692,675	....
June	124,604,875	182,757,015	150,309,133	....
July	117,821,174	177,121,733	151,875,676	....

Of the deposit in Central Gold Reserves $19,710,000 is in gold coin; the balance is in Dominion Notes.

Call loans abroad continue to increase substantially, and are now higher than for any month since November, 1916.

The following table shows the course of the principal loan accounts during the past six years:—

April.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913	$898,964,181	$36,310,033	$69,757,912	$103,212,185
1914	835,705,064	54,362,513	68,523,774	139,937,027
1915	762,931,851	37,705,039	68,599,095	121,522,971
1916	777,764,682	57,008,965	82,572,448	147,146,443
1917	880,523,897	86,058,220	82,737,417	159,156,054
1918	884,089,402	99,267,660	77,497,360	179,818,531

Current loans in Canada are now back about their pre-war level, and call loans have fallen off from the 1916 and 1917 figures. Outside of Canada, call and current loans of Canadian banks have increased steadily, with the exception of a drop in 1915.

ST. CATHARINES BONDS AWARDED

Messrs. Wood, Gundy and Company, of Toronto, have been awarded a block of $127,798 63 city of St. Catharines bonds. These bonds bear interest at the rate of 6 per cent. per annum, and are payable in 7, 15 and 20 annual instalments. The price paid was 97.08.

Dominion Government---April, 1918

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to other banks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

ONTARIO FISH PRICES

The fish being supplied by the Ontario government is not sufficient to cope with the demand. There is, therefore, a tendency for the price to be raised above the price fixed by the government. The government is determined to keep the price at 15 cents, and if overcharging is proved, will cancel the dealer's right to handle the fish. It has, moreover, been decided to refuse further sales, at wholesale prices, to the big restaurants, as it is held that the householder has first call upon the supply.

The Australian government is arranging for the sale of next year's exportable surplus of butter to the Imperial government.

A CONTINENTAL AIR SERVICE

Assistant Postmaster-General Praeger, in a statement recently to a Baltimore correspondent, predicted big developments for the aerial mail service, including a five-cent mail service by airplane; flights between Chicago and other middle west cities and eastern points, and finally transcontinental flights; Washington to Chicago flights in from seven to nine hours; establishment of flights in sections not accessible by trains; aerial routes where circuitous approaches due to canyons, lakes and other natural objects make ordinary mail deliveries unusually slow; final interlocking of the entire country after the war with airplane mail service for letters and packages.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Dominion Textile Company.—A large increase in quick assets from $4,856,594 at the end of the previous year to $7,344,607 is shown in the company's annual statement for the year ended March 31st last. The latter figure is more than double current liabilities of $3,722,321. Net profits totalled $1,873,371, compared with $1,582,760 last year. Total sales during the year were $16,850,279, compared with $13,375,750 for the previous year.

P. Lyall and Sons Construction Company, Limited.—Gross earnings of the company for the year ended March 31st last are $1,491,082, as compared with the $915,449 reported a year ago, and the $234,644 of two years ago.

As in 1916, a large part of the year's earnings went to amortization of the company's munition plant. A year ago a sum of $625,000 was written off; this year the write-off is $894,638, and the entire outlay on the special plant and equipment has now been provided for.

Eastman Kodak Company.—The company earned a net profit of $14,542,567 last year, a decline of $2,747,361 from the result in 1916. The profit was calculated after setting aside $4,750,000 for the Federal war taxes. After paying $369,942 preferred stock dividends, the balance remaining was equal to $72.53 per share of common stock, against $86.62 the year before. The annual statement just issued showed cash on hand amounting to $12,738,726, against $10,448,846 at the end of 1916, while the inventory was $17,774,338, compared with $16,760,084. The surplus as of December 31st, 1917, totalled $26,982,024, an increase for the year of $8,811,105.

Twin City Rapid Transit Company.—The gross earnings of the company for April were $776,967, a decrease of $62,105, and the net income was $66,194, a decrease of $83,029. For the four months gross earnings amounted to $3,234,357, a decrease of $246,627, and the net income to $176,365, a decrease of $390,242. The following are the comparative figures for the month of April:—

	1918.	1917.
Gross revenues	$776,967.20	$839,072.05
Operating expenses	555,212.01	534,446.17
Net revenue	221,755.19	304,625.88
Fixed charges and taxes...	155,560.31	145,402.44
Net income	66,194.88	159,223.44

Dominion Steel Corporation.—The April production o' the corporation is shown, in tons, by comparison with March production as follows:—

	April.	March.
Pig iron	28,000	25,000
Ingots	31,000	30,000
Billets	12,000	24,000
Rails	13,000	.....
Rods	7,200	9,600
Merchant bars	1,200	4,200
Wire and wire products	2,300	2,300

The output of the Dominion Coal Company was 290,000 tons, as compared with 267,000 tons in March.

Consolidated Mining and Smelting Company of Canada.—The company makes the following statement of ore receipts at Trail Smelter from May 1st to May 7th, 1918, inclusive, and from October 1st, 1917, to date, in tons:—

Company's Mines—		
Centre Star	733	40,589
Le Roi	1,451	53,082
Sullivan	1,569	47,430
St. Eugene	.....	656
Emma	1,034	21,397
Lucky Thought	.....	516
Molly Gibson	.....	867
Ottawa	.....	29
Highland	.....	362
No. One	180	3,565
Richmond Eureka	.....	36
Other mines	2,522	49,067
Total	7,489	217,596

Montreal Light, Heat and Power Consolidated.—The second annual report of the directors will be presented to shareholders on June 5th, 1918.

The following is a report and financial statement of the company's operations for fiscal year ended April 30th, 1918:—

Gross revenue		$10,390,684.14
Expenses and taxes	$4,767,869.41	
Depreciation and renewal reserve	1,039,068.41	
		5,806,937.82
Net revenue		$ 4,583,746.32
Fixed charges		995,022.39
Net income		$ 3,588,723.93
Dividends paid	$1,916,367.00	
Dividend payable May 15th, 1918.	639,658.00	
		2,556,025.00
Surplus		$ 1,032,698.93
Less appropriations:—		
Pension fund		20,000.00
Transferred to general surplus		$ 1,012,698.93

The surplus earnings from the year's operations amounted to $1,032,698.23, out of which $20,000 has been appropriated for pension fund; the balance, amounting to $1,012,698.93, has been carried forward to general surplus, bringing the accrued surplus as at the close of the year to $1,585,313.54.

During the year regular quarterly dividends have been declared and paid on the stock of the company at the rate of 4 per cent. per annum.

There were redeemed for sinking fund purposes, in accordance with the mortgages securing the respective issues, $56,000 of mortgage debt, as constituted by $36,000 of the Montreal Light, Heat and Power Company's Lachine division sinking fund bonds and $20,000 of Provincial Light, Heat and Power Company's sinking fund bonds.

During the year there was expended on maintenance account $455,302.73, which, with the appropriation for depreciation and renewal reserve, represents a total expenditure and provision in this connection of $1,494,371.14.

BANK CLEARINGS

The following are the bank clearings for the weeks ended May 23rd, 1917, and May 23rd, 1918, respectively, with changes:—

BANK PROFITS IN 1918

Thus far in 1918 half a dozen banking institutions have issued their reports. These reports exhibit the same general tendencies—deposits and holdings of securities tending rather sharply upwards, with net profits showing a relatively smaller increase. Some of the banks also show substantial appropriations from current profits, subsequent to their declaration, to cover depreciation of bonds and debentures. It is well known that since the commencement of the war, and especially since April, 1917, when the United States entered the struggle, rates of interest on high-class securities have been rising more or less steadily. This is reflected in the yields obtained by investors in the successive issues of provincial and municipal bonds. Every rise of ¼ or ½ per cent. in the interest yield offered to investors has meant a corresponding decline in the actual market value of the investment securities held by the banks; and the bankers have been obliged to recognize and provide for the resultant depreciation. The amounts written off need not be considered as irretrievably lost. If the bank sells the securities while prices are depressed the paper losses become actual losses; but if, in the course of a few years, the general interest rate should fall, it is probable that a part, perhaps a substantial part, of the amounts now being appropriated would be recovered.

One reason why the increase of profits has not kept pace with the growth of resources is seen in the rising costs of operation. In this respect the banks have been subject to the same influences as have affected other corporations and businesses. It has been necessary to recognize the increased cost of living and to grant larger salaries and bonuses to bank employees. There is, of course, at all times a more or less steady succession of increases given to the individual employee as the employee adds to his or her experience and rises to more responsible positions; but on the present occasion it has been necessary to generally raise the scale of pay applying to the several posts or positions. Then, in connection with the salary list, the great increase in number of inexperienced and untrained clerks has been another source of extra expense. Also, additional expenses have been met in various other directions. Municipal and provincial taxes have been increased the cost of the stationery supply and of fuel for heating the hundreds of bank buildings has risen sharply; the increase of the postage rate and the stamp tax on bills and cheques have also been factors.

As regards the growth of banking resources, it is a satisfactory circumstance that a large part is represented by increase of the notice deposits. In the two years ending March, 1918, the notice deposits increased $183,000,000. There is good reason for presuming that this reflects a very extensive accumulation of savings by farmers and working people, and that it will constitute a permanent addition to Canada's store of liquid capital. The increase of resources represented by the rise in demand deposits is not so permanent—this has amounted to $171,000,000 in the last two years. Apparently it is the wise desire of the government to avoid unnecessarily loading the banks with war securities. Holdings of these have risen $268,000,000 since March, 1916; but this accounts for less than half the increase of total assets. As the government will require to borrow rather extensively from the banks in July, August and September, in anticipation of the flotation of the fifth domestic war loan, it would not be surprising if the bank's security holdings increase further in those months, with consequent further expansion of their total assets; but in view of the large amounts now carried, it is scarcely to be expected that the increase will be as large as in the two preceding years.

ANNUITIES FOR CHILDREN

A number of suggestions have been made by the press and by the public during the past few months in favor of a part of the expense of raising children being paid by the State. The project has been, unfortunately, termed "Mothers' Pensions," which conveys a wrong idea of the purpose of the scheme. So far there has been no discussion of it in the Canadian House, but partial measures in this direction have been adopted by other governments.

Five years ago, the Commonwealth government of Australia adopted what is known as the "maternity allowance," a payment of £5 to the mother of every child born. This is merely a cash bonus, and does not pretend to pay any of the expense of raising the child. The amount paid out in 1913, the first year of its operation, was £417,375, and in 1916, £650,715. The claim must be entered in the name of the mother in each case.

A somewhat different project was adopted in 1916 by Manitoba, where it is known as "mothers' allowances." The circumstances of each case are investigated, and payment made in accordance with the individual need. This is, of course, a more restricted form, and is more in the nature of a charitable allowance. So far, about $11,000 has been paid out by Manitoba for this purpose. Similar measures have also been contemplated in Saskatchewan and Alberta.

Other schemes of the kind have been tried by some of the states and municipalities in the United States, with varying degrees of success. One point at least is clear, and that is that no uniform plan of action has been evolved, and actual experience so far is too limited to admit of any comprehensive conclusions being reached in this way. One thing is apparent, however, and that is that the project can never be a complete success so long as it is of the nature of charity. Payments should be automatic, and inclusive of all classes. Again, an allowance merely to widows with children, is not sufficient, as many families with both parents alive are in more difficult circumstances. The payments are not for service rendered, as has been maintained in some quarters, but of the nature of trust funds for the proper care of children, which can be more satisfactorily administered by the parent than by the State directly.

There are various arguments in favor of an allowance of this kind. It would relieve the economic pressure on large families, and should result in the raising of healthier children. It would shift a part of the burden to the shoulders of the taxpayers, the rich, the single, and the childless. Moreover, the payments could be conditional upon the proper care of the child, and state control facilitated in this way.

On the other hand, as it savors of socialism, it meets with strenuous objection in many quarters. If, however, the State undertakes to educate the young, the same arguments might be used to favor providing the more essential physical requirements.

Again, the financial burden involved in a complete measure of this kind would be enormous. A payment of $50 per year for every child in Canada, under the age of 16 years, would amount to about $100,000,000 per year, or much more than the interest on the present national debt. For this reason the present is an inopportune time to adopt such a measure, even were it found to be desirable. Our revenue-raising ability is already being put to the test, and will be increasingly so for several years to come. If after the war we find ourselves with a surplus revenue, the question might be taken up, but in any case at least a part of the revenue required should be in sight.

FIRE INSURANCE IN 1917

An interesting feature of the Dominion report on fire insurance business in Canada in 1917, as shown on pages 42 and 44 of *The Monetary Times* of May 17th, is the very large proportions of "gross cash received for premiums in 1917" paid out in reinsurances and return premiums, the "gross cash received" being $9,206,601 of which $4,310,758 was paid out for return premiums and reinsurances or nearly 47 per cent.

The gross cash received by British and colonial companies was $20,091,342, of which $3,800,321 was paid out for reinsurances and return premiums, or about 19 per cent.

The gross cash received by companies of United States and other countries was $13,514,629, of which $3,431,815 was paid out for reinsurances and premiums, or about 25¼ per cent.

The net premiums received by all the companies reporting to the Dominion Bureau for 1917 was $31,269,677, the gross cash received being $42,812,572, of which $11,542,894 was paid out for reinsurances and return premiums, or a little over 27 per cent.

The gross cash received for premiums in 1917 by Canadian companies was $9,206,601 as against $8,378,043 in 1916, but the net cash received in the two years was about equal; their losses incurred during the year 1917 were $2,499,145, being very nearly 50 per cent., a slight decrease from 1916.

It must be borne in mind that some of the Canadian companies are really adjuncts to British or American companies. The gross cash received for premiums in 1917 by British and colonial companies was $20,091,342, an increase of nearly three million dollars over 1916, whilst their losses in 1917 were but $285,544 over those of 1916, being about 54½ per cent.

The gross cash received for premiums in 1917 by the companies of the United States and other countries amounted to $13,514,629, being nearly two and a half millions over 1916, whilst their losses incurred during 1917 were a little over one million dollars more than in 1916, about 60 per cent. of their net premiums, but their ratio of losses to net premiums in 1917 was very slightly lower than in 1916.

The ratio of losses to net premiums received by all the companies in 1917 was a little less than 56 per cent. whilst in 1916 it was about 59 per cent.; some of the United States companies appear to have been particularly unfortunate. It is possible that some of their representatives were not well informed as to local conditions.

The apparently excessive caution of the purely Canadian companies in 1917, if continued in 1918, may have already been justified by the too frequent occurrence of fires entailing heavy amounts of losses.

On the whole, the report shows careful attention on the part of the managers of all the companies, with results remarkably steady, whilst the aggressions of the outside companies have not generally involved them in disaster during the past two years.

TRADE OF THE PORT OF ST. JOHN

In our issue of May 24th, in the article "Progress of St. John," we referred to the export figures for the year ended March 31st, 1918, as being over $20,000,000. The correct figure is over $200,000,000, and the total trade for the year was $217,570,847.

A DEFECT IN TRANSPORTATION

Canadian Roads and Equipment Has Outdistanced Distributive Organization

BY J. L. PAYNE.

Although we have built up a huge transportation system, connecting all parts of the Dominion, and providing adequate facilities for our rapidly developing commerce, there is still something lacking. The primary purpose of railways is to enable marketing to be done—expeditiously and economically—and to bring producers and consumers within ready reach of each other. We have a sufficient mileage of tracks, as well as the locomotives and cars to accomplish all that; but we do not get the results. This is not the fault of the railways. It is the fault of the people. And it is one of the things which not only calls insistently for adjustment, but will continue to cause vast and quite needless waste until it is adjusted. Let me make myself clear by a few homely but pertinent illustrations.

In 1916 there was a short crop of potatoes in Ontario and Quebec. In the province of New Brunswick there was a normal yield, while in Prince Edward Island there was a phenomenal harvest. Here was, to a very large extent, a mere problem in distribution. By both rail and water there were ample means of meeting the shortage in the two central provinces out of the surplus of the two maritime provinces. The situation ought to have been met by the full use of these means, to create which money had been provided out of the common treasury of the whole people. But nothing of the kind occurred. Instead, the people of the upper provinces were made to pay an exorbitant price for potatoes. The railways should have made it possible to equalize in some measure the needs of Ontario and Quebec and the plenty of the people down by the sea. Freight tolls remained unchanged. Trains were moved without interruption. Steamers and sailing vessels passed from port to port. Yet the prime object of these ample facilities for the meeting of just such an emergency failed for the want of some controlling tribunal to deal with this simple problem in distribution.

The foregoing is merely a simple example of what is taking place every day in the year throughout the length and breadth of the Dominion. It costs not more than one cent per dozen to move eggs by rail, even by express, for a distance of a hundred miles, more or less; yet within a radius of one, two or five hundred miles it is a common thing to find a difference of from ten to thirty cents in the market price. Last fall, when eggs were selling at 65 cents in Montreal and Toronto, I myself purchased a crate in the open market at 35 cents, although the transportation charge from the point where I bought to either of the two cities named was not more than two cents per dozen. Eggs have frequently sold in Vancouver for $1 when they could have been got in Edmonton for 65 cents, and five cents would have carried them from one point to the other. The same thing is true of many commodities, and it shows quite plainly how far we have fallen short of realizing the full practical benefits of our available means of exchange.

Producer and Consumer not in Close Contact.

If this unsatisfactory situation were irremediable, then it is a sheer waste of time to talk about it. But it is not. It merely shows that we have been so busy getting the transportation facilities which we felt were necessary for the expansion of our commerce, and properly so, that we have not taken the time to arrange for the full realization of the accruing advantages. The railways are there, with their trains and reasonable charges for the moving of commodities from the point of production to the point of consumption, and yet the people for whom all this elaborate service has been provided fail to take advantage of it. In other words, producers and consumers are not in easy touch with each other, and both undoubtedly suffer from the absence of contact. To say that this is unavoidable is to say that those who want to sell and those who want to buy can neither co-operate nor get together. Their interests are unquestionably mutual.

This matter is bigger and far more important than these somewhat trivial illustrations may seem to indicate. The aggregate of all the inequalities in market prices is very large. More than that, there are good reasons why, at this time of reconstruction and effort to avoid waste, we should look ahead. Within thirty years Montreal, Toronto, Hamilton, Ottawa, and a score of other centres have doubled in size. Winnipeg, Vancouver, Calgary and Edmonton have become big cities. The process of centralization is proceeding with considerable speed. It will continue as a vital operating force in the growth and consolidation of the Dominion. When one fixes his thoughts on that aspect of national development he cannot fail to see the tremendous importance of concentrating the best sagacity of our commercial forces—boards of trade, organizations of business men, parliament, and so on—on this problem of distribution. The whole population of the country is divided into two classes—producers and consumers. Both are deeply concerned. Both are losers by existing defects. The interests of both would be served by a well-digested and practicable plan for the equalization of market prices.

No Substitute as yet for Middleman.

A great deal has been said since the outbreak of war and the flight of prices about the part played by middlemen in the general scheme of distribution of food commodities. Most of the criticism has been hostile, and, it must be frankly confessed, not without cause. These agents, operating between producer and consumer, have obviously been responsible for the creation of part of the present scale of high cost. But, all said and done, they merely took advantage of the opportunity which lack of organization among those vitally concerned created. The remedy was all the time within reach of the people who were being made to pay for their indifference. Clearly, however, the only difficulty in the way was the means of bringing producers and consumers together. The railways provided that link; and all that was really necessary was for some independent, disinterested and properly ordained body to act as a go-between. We might assume that the Board of Food Control was designed to serve that purpose; but, whatever may have been the underlying reason, that tribunal has not exercised any such function. Such a tribunal might, however, if vested with adequate powers, very well do so.

There is much talk at the present time about the Canadian railway problem, and much of it is, happily, constructive in character. It is undoubtedly a very big problem, and beset by many complications; but it will be solved. The matter to which these observations relate is merely collateral to the larger issue. It can be dealt with by itself. While plans are maturing for the consolidation of various units, the cutting out of overlapping mileage, the rescue of certain lives from insolvency, and the creation of a comprehensive system capable of being operated with needed economy, this matter of distribution could receive separate attention. At all events, until it is carefully looked into and a sound plan evolved the waste to which allusion has been made will go unchecked—a serious defect in our scheme of transportation will remain.

NEWFOUNDLAND BOND ISSUE

An issue of $3,000,000 of Newfoundland bonds is being offered by A. E. Ames & Company, Wood, Gundy & Company, and the Dominion Securities Corporation, of Toronto. This is part of a total issue of $10,000,000 authorized for war purposes. The bonds are dated 1st of June, 1918, and are due 30th June, 1928. They bear interest at 6½ per cent., and are offered at par and accrued interest. Principal and half-yearly interest is payable on the 1st of January and July in gold, in Toronto, Montreal, New York or St. Johns, Newfoundland, and the bonds are exempt from all present and future taxes imposed by the Newfoundland legislature, including any income tax. The denominations are $100, $500, and $1,000. The offering is made in Canada with the permission of the Department of Finance, as required by Order-in-Council. The total debt of Newfoundland is $40,489,765; part of this, however, consist of self-supporting loans to municipalities, and after deducting this portion and the sinking fund, the net debt is $38,164,554, or approximately $150 per head of population. Last year the government had a surplus of $651,757. Prior to the war, Newfoundland's issues frequently sold in England at less than a 4 per cent. basis, and the bonds have always been highly regarded, as Newfoundland is the oldest British colony. This $3,000,000 is part of a total issue of $10,000,000 being made for war purposes.

MORTGAGE LOANS ASSOCIATION OF ALBERTA

Annual Meeting in Edmonton—Results Achieved by the Association

The third annual meeting of the Mortgage Loans Association of Alberta was held in Calgary on April 23rd, and among those present were: Mr. Wm. Toole, of the Canada Life, president; Mr. W. T. Creighton, of the Canada Permanent, vice-president; and Mr. John Appleton, secretary-treasurer of the Dominion Mortgage and Investments Association. Mr. Toole's speech regarding general loan conditions in Alberta appeared in *The Monetary Times* of May 10th.

Mr. W. T. Creighton, the vice-president, gave a résumé of the work carried on by the association, in the way of promoting beneficial legislation. He stated that it had been considered best to confine their efforts to the more urgent matters. Mr. Creighton outlined the work as follows:—

A meeting of the executive of the Mortgage Loans Association was held at Edmonton, January 9th, 1918, at the office of the Canada Permanent Mortgage Corporation, when proposed amendments to Alberta legislation were considered. After some discussion it was decided not to attempt to obtain amendments to all undesirable legislation at the approaching session, but in view of the fact that a new premier had lately taken office, it would be better rather than embarrass him with a long list of demands, to confine our requests to those that are the most needed at the present. These were declared to be as follows: The Dower Act, the Volunteer and Reservist Relief Act, and Personal Covenant in Mortgages and Agreements.

The following members were then appointed to wait upon the premier: Messrs. H. A. Howard, H. Melvin, George H. Gowan, J. Garrett and W. T. Creighton

Dower Act.

With regard to the Dower Act it was asked that legislation be passed to protect lenders and purchasers on the lines passed by the government of Saskatchewan as set forth in chapter 27, section 3 of 1916, being an act to amend the Homestead Act. It was also asked that provision be made for barring the dower in the case of married women under the age of 21 years, and also that provision be made for such cases as where married women are lunatics and where they are living apart from their husbands.

Volunteer and Reservist Relief Act.

With regard to the Volunteer and Reservist Relief Act, it was suggested that in view of the uncertainty as to whether draft men are protected under the present act, that it be repealed and a new act passed giving these men protection and also making it clear that this protection extends only to overseas men. It was also asked that some means be provided by amendment to make clause 8 of the said act relating to the collection of rental value operative.

Personal Covenants.

With regard to the personal covenants it was pointed out that in the Statute Law Amendments of 1916, all personal covenants were practically cancelled and it was asked that these be restored.

The delegation was well received by the premier, and after a very full discussion of the proposed amendments, during which the premier appeared disposed to favor all three amendments, the question was left for further discussion between the premier and Mr. Creighton at a later date.

During the following weeks and during the session, Mr. Creighton had several discussions with the premier and also enlarged on the various points in letters addressed to the premier and the provincial treasurer. Before the session ended, our president, Mr. Toole, interviewed the premier, provincial treasurer and others, again going over with them these and other matters of interest to the association.

Now that the House has prorogued, definite information will soon be on hand showing to what extent the wishes of the association have been complied with.

Mr. Creighton then outlined the amendments which he understood had been made to the Dower Act and the Volunteer and Reservist Act, pointing out the several changes made, and their resulting effect on the loaning interests in the province.

Mr. G. H. Gowan, in moving the adoption of the reports of the president and vice-president, said:—

"I have no extended remarks to make but the work of our association is very evidently bearing fruit, as we see from time to time with satisfaction that some of the barriers raised against the free investment of capital in our province have been removed, and we can only express the hope that our continued efforts will be more abundantly productive in the near future."

The motion was seconded by Mr. Mackay, who, in a few words, told of his attendance at the annual meeting of the Dominion Mortgage and Investments Association held recently in Toronto.

Foreclosing on Property of Volunteers.

Mr. John Appleton, secretary-treasurer of the Dominion Association, reviewed the work accomplished, and mentioned that among the matters which the parent body had under consideration, and which was being brought to the attention of the government, was the question of the Dominion government taking over its share of the enlisted man's then existing liabilities.

Two recent judgments on this subject were quoted, in both of which cases the judgment was given in favor of the mortgagee, with costs; the fact that the mortgagor was a volunteer or reservist was held as not denying the right of the mortgagee to foreclosure.

Mr. Wm. Toole was elected honorary president, Mr. W. T. Creighton president and Mr. W. A. Howard vice-president. Executives at Calgary and Edmonton were also elected.

NEW WESTMINSTER BOND ISSUE

The city of New Westminster is advertising for sale an issue of $500,000 5-year 6 per cent. bonds. Tenders will be received up to June 10th, and the official advertisement appears on another page of this issue. *The Monetary Times* has been advised by Mr. R. S. Gilchrist, the city treasurer, that the city has an issue of notes maturing on August 16th for which they have funds on hand, but for which the general treasury is to be reimbursed by the present issue. The issue will be secured by $614,000 of long-term bonds.

STERLING BANK OF CANADA

The complete annual report of the Sterling Bank of Canada, mention of which was made in our issue of last week, appears in full upon another page of this issue. The Sterling Bank, together with other Canadian banks, has experienced during the year a very large increase in total assets and considerable increase in circulation and savings deposits. The latter is very gratifying, considering the heavy war loans which have been floated. The bank has increased its own holdings of government securities, and profits for the year showed a satisfactory increase.

RAILWAY COMMISSIONERS' RULING

At a sitting of the Board of Railway Commissioners for Canada on May 22nd the question of rates on shipments made prior to March 15th, and held over for a period was considered. These were shipments made to interior elevators and mills, with provision for milling, malting, storage or cleaning in transit.

The commissioners ruled that in cases such as these, reshipments made within six months shall be entitled to the balance of the through rate existing at the time of the original shipment of the grain under the transit tariffs applicable.

Wheat shipped on or after the 15th day of March, and reshipped from a stop-over point west of Fort William before the first day of June to destinations west of and including Port Arthur and Armstrong, shall be entitled to the balance of the through rate to the said destinations existing at the time of the original shipment of the wheat under the transit tariffs applicable.

The charge for the terminal service at the stop-over point, also the charge for the haul, if any, out of the direct line of transit, in accordance with the tariffs applicable, are to be additional.

ASTOUNDING GROWTH OF CANADIAN TRADE

Canada's Trade Since Confederation—Most Rapid Growth During Past Five Years

The aggregate foreign trade of Canada for the fiscal year ended March 31st last amounted to $2,548,691,639. This represents surprising growth. In 1901 the late Hon. William Patterson, addressing a public gathering, said: "I do not wish to seem unduly optimistic, but I feel warranted in saying the trade of Canada will soon reach the $400,000,000 mark." If he had said: "We shall, within twelve years pass the billion mark," he would have been set down as a visionary, a reckless and irresponsible boaster. Had he predicted a total of two billions within seventeen years, he would probably have been disqualified in public judgment for the high office which he held. In his modest forecast of 1901, he stood almost alone; for at that period of relatively slow development everybody was disposed to place a limitation on trade probabilities. Nevertheless, we have now passed the two billion standard by a larger sum than the late Minister of Customs fixed as a mark which might be taken as exhibiting exceptional progress; and the amazing thing is that this advance has aroused little if any enthusiasm. It has been accepted as the natural corollary of other great and unexpected events. It has happened during a period of vast and striking changes, which have in large degree prepared the public mind for the placid acceptance of almost any happening.

In order that the eye may help the mind to grasp the marvellous expansion in our foreign trade, the following table is presented:—

	Exports.	Imports.	Total.
1898	$164,152,683	$ 130,698,006	$ 294,850,689
1903	225,849,724	233,790,516	459,640,240
1908	280,006,606	358,428,616	638,435,222
1913	393,232,057	675,517,045	1,068,749,102
1918	1,589,661,195	974,801,020	2,548,691,639

Striking as is the presentation of the facts in this form, by leaps of five years, the full significance of the increase for the last period is not realized until the rate of progress is measured by the gauge of percentage. It then stands out as follows:—

	Exports. Increase %.	Imports. Increase %.	Total trade Increase %.
1903	37.6	79.3	55.2
1908	23.9	53.3	38.9
1913	40.4	88.4	67.4
1918	147.9	135.3	138.6

It will serve to emphasize the foregoing results if it is pointed out that the growth of the past three years was $185,056,789 more than the total gain made during the 47 years following Confederation. In exports, the betterment since 1915 was $706,788,693; whereas from 1867 to the end of 1915, the increase was but $433,240,989. Putting it in still another way, the increment in aggregate trade for the single year just closed, as compared with 1917, was millions more than the increment for the 35 years preceding 1903. It is only when the case is put in this comparative form that one gets a positive suggestion of the real advance which has been made by the foreign commerce of Canada during the past five years, and especially during the past three pregnant years.

Exports Now Exceed Imports.

There is another aspect of the matter which has a vital meaning to the people of Canada at this time of immeasurable crisis. Since Confederation the balance of trade has been, on the whole, heavily adverse. Only in the years 1880, 1881, 1894 and for the decade 1894-1903, did exports exceed imports. For the ten years commencing with 1904 the excess of imports went bounding upward, until in 1913 it stood at $282,284,988. Such a situation, joined to our heavy obligations to Great Britain for interest charges on loans, meant a considerable drain on the resources of the country. In 1915 a marked swing of the pendulum took place, and in 1918 the balance in favor of the Dominion reached the large figure of $614,860,175. We see this change reflected in swelling bank deposits.

In measuring the growth of trade by dollars, however, it is quite easy to attach a false meaning to comparative results. There is at the present time a tremendous inflation of values. It would, therefore, be helpful if we could ascertain with some degree of accuracy, what has been the rise in volume. But it cannot be done. All that is possible is to apply one or two more or less superficial tests, which are indicative but not necessarily conclusive. The variety of our exports has been multiplying as our industries have developed. For example, we sent abroad in 1917 manufactures to the value of $487,312,766; whereas 30 years ago we had exports of that class valued at but $3,079,972. That fact alone, throws a strong light on the changing character of our trade, which precludes anything like a trustworthy measurement of volume now, with volume in years gone by, when the conditions were vitally different. Nevertheless, it must be very clearly borne in mind that a considerable proportion of the betterment which has taken place in recent years, notably since the outbreak of war, is accounted for in the mere upheaval of values. Thus, in 1913, we exported 93,166,009 bushels of wheat at a valuation of $88,608,730, or an average of 95.1 cents per bushel. In 1917 we sent out 189,643,846 bushels at a valuation of $244,394,586, or $1.29 per bushel. There was thus a difference of 114 per cent. in volume and 38 per cent. in value; but in 1918, although the details are not available, there was a much higher jump in the average. Butter, which does not take a large place, but is nevertheless suggestive of the change which has accurred in a considerable number of commodities, rose from an average of 18 cents per lb. in 1887 to 31 cents in 1917. Bacon is still more striking, the average having gone up from 7.9 cents per lb. 30 years ago to 20.7 cents in 1917; but, whereas the volume was only 11,030,689 lbs. in 1887, it was 207,213,267 in 1917. If these comparisons were carried over a wide range of classes, both in exports and imports, they would show gains in volume as well as value. The betterment in market prices, however, would rise above the betterment in volume in its effect on aggregate trade.

Greater than United States Trade in 1900.

At this time, when patriotic feeling rises above all other considerations and sentiments, it is distinctly inspiring to observe the wonderful growth which has taken place in the foreign trade of the Dominion. It has created general and genuine prosperity. It has given us a larger place among the nations. If we desire to give a fillip to our sense of fast developing strength, we should find it in the fact that our total trade in 1918 was greater than was the total trade of the United States in 1900. Such a comparison affords ground for deep satisfaction and gratitude. We are growing and growing with unexampled rapidity. Let us rejoice; but there should not be any unjustified assumption of either present or prospective strength. All wars have been accompanied by inflation and followed by reaction. We can scarcely hope to escape the operations of a law which has been constant through the centuries. The evils which grew out of unpreparedness for war should teach us to prepare for peace when, please God, it shall come. The conditions which have made for great gains in both volume and value during the past three years will inevitably change. Happily, the experience of these momentous years in handling big problems has fitted us to deal in a brave and competent spirit with other big things which will grow out of reconstruction when the fighting has ceased.

EXPRESS MERGER IN THE UNITED STATES

An agreement has been reached among the four leading American Express Companies for their union in a single company with a capital of more than $30,000,000, to be known probably as the Federal Express Company. The four companies concerned are: the Adams, the American, the Wells-Fargo, and the Southern Company. It is said that Mr. George C. Taylor, president of the American Express, will be head of the new concern. The combination is to become effective on July 1st. The company will be the express carrying agency of the railroads, operating privately, but under contract to turn over 50¼ per cent. of their gross revenues to the railroads for transportation privileges. An application for a 10 per cent. increase in rates, filed before government operation of railways was contemplated, will be passed upon soon by the Interstate Commerce Commission. There are altogether over 100,000 employees of the four companies. According to Mr. Taylor, wages will be raised in many cases after the scale of wage advances ordered for railway employees has been examined. There are a number of smaller railway-owned express companies left, such as, the Western, the Great Northern and the Northern.

THE GROWTH OF MONEY AND EXCHANGE

Relative Values of Foreign Coins — Britain May Adopt a Decimal System

(This article is a continuance from last week of an address given by Mr. Ewing Buchan before the Pacific subsection of the Canadian Bankers' Association.)

"The instance of the standard gold par value of the sovereign and the dollar of America (I use the word in its broad sense) is applicable to all foreign money. French francs, German (pardon the name) marks, Danish crowns, Dutch guilders, Russian roubles, Spanish pesetas, etc. The following are the several values:—

Franc	19.3 cents
Mark	23.8 "
Crown	26.8 "
Guilder	40.2 "
Rouble	51.5 "
Peseta	19.2 "

"The methods of quotation vary, as you gentlemen know, francs being in the number of francs to the dollar, marks in the number of cents to 4 marks, the others being in the number of cents to the foreign piece mentioned, the rates of conversion being above or below the par value, as the case may be.

The Rate of Exchange.

"The rate of exchange between any two countries, would, under normal conditions, be generally governed by the cost and facilities for exporting or importing gold, barring transactions in securities. When I was in business in Toronto, the figures as between America and Britain were normally 8⅞ or 4.84 for import, and 10¼ or 4.90 for export, but under present abnormal conditions, making it impossible to import gold from Britain in settlement of large trade balances, following enormous exports of supplies and munitions, sterling exchange rules at a figure far below the normal gold import basis, and I doubt if you gentlemen can say what its future course will be.

"The other side of the question is presented in the abnormal premium you are paying to place funds in New York, it being impossible to ship gold to cover the trade balances against unprecedented imports, the cost of which, in ordinary times, would be considerably less than ¼ of 1 per cent. between financial centres of Toronto or Montreal and New York.

Mexican and Oriental Exchange.

"Mention has been made of some Oriental funds in which the Mexican dollar, having a par value of 47.7 cents has been and is yet a large factor, Mexico being one of the oldest and chief silver producing countries in the world. Hongkong has its own currency in dollars. That exchange has advanced about 60 per cent. since 1914 proportionately to silver bar. The young gentlemen, no doubt, have quite enough to do with the versatile Mongolian, during business hours, when he purchases his Hongkong exchange or gold, if he can get it, and I would spare them any further reference. The tael obtains largely in China with a value varying from 64.8 to 72.2 cents according to local conditions and the price of silver in London. Japan used the yen, having a standard gold value of 49.8 cents.

Silver and Gold Standards.

"Oriental and Mexican exchanges, not being all on a gold basis, have been and are subject to severe fluctuations, and students of monetary systems have advocated the use of silver as a standard. One of the noted advocates, as some of you will remember, was defeated in an election to the presidency of the neighboring republic on a platform of a dual standard of sixteen to one for silver and gold respectively, the value of the former to be sustained by the government purchasing silver for coinage purposes, or the issuance of certificates against it.

"In the year of that election, the average price of silver in London was 29 pence per ounce, and it stood thereabouts until 1915, since which time, as I have said, it has risen about 60 per cent. Present London quotations are about 43 pence, though it touched 55 in the interval, but at 43 it bears a ratio of 21⅝ to one, as compared with the Bank of England's buying price for gold. In view of Canada being the world's third largest producer of silver, there would have been a profit in silver, for coinage purposes, at 21⅝ to 1, or even 16 to 1, which would make the most astute banker blush.

"But greater authorities than the silver-tongued pacifist have given the world their views on the much debated subject of 'bi-metallism,' such, for instance, as Sir Thos. Gresham of the 16th century, whose conclusion was, that, under the dual standard of gold and silver, the cheaper metal would displace the dearer, from time to time, as governed by supply and demand, and there would thereby be an alternating standard, which, though variable, would lead to greater stability and a more equitable monetary system than a single gold standard.

"Viscount Goschen, who passed away in 1907, leaned somewhat to the same view, believing that gold, as the sole standard throughout the world, would surely cause a severe monetary crisis.

"Mr. Moreton Frewen, a present-day authority, who addressed our Canadian Club in 1909 on the subject of our exchanges with Asia, holds similar views of thought, and looked to the free coinage of silver as a panacea for all monetary ills.

"Silver is, of course, more or less in use in every country, but under the gold standard, it is only token money, not representing the intrinsic value of the coin and only legal tender to a limited extent, as you gentlemen all know. But, if silver were purchased by governments and coined without limit, one would think it might lead to a depreciated currency, with a result somewhat akin to the currency of the United States during the civil war, when greenbacks declined in value until in 1864, they were only worth 38 cents on the dollar, driving gold out of sight, to be bought and sold as a speculative commodity, reaching a corresponding price of 263. The value of currency was only restored to par in 1879, when gold payments were resumed and a stable currency was established.

Reasons for Use of Gold as Standard.

"My own opinion, if I may presume to offer it, is that there can be only one standard to insure stability, and gold has proved to be the choice from long experience. It is the most beautiful, and the most treasured of all metals. It is almost imperishable, and requires very little alloy to give it sufficient hardness for coinage purposes. It is of little bulk, and therefore easily transported. It is known as the royal metal.

"Gold is the only commodity in the world, the value of which, under normal conditions, is established by law. No matter how great the volume produced may be, the Bank of England, the world's banker, is empowered to buy with its notes at 3 pounds, 17 shillings and 9 pence per ounce, 11/12 fine. The bank may pay more, but never less. It might be interesting to note the holdings of gold, per capita, in some countries as they were shortly before the beginning of the war:—

Australia	33.19
France	23.57
Argentine	23.30
United States	18.58
Germany	17.23
Britain	12.65
Egypt	12.50
Canada	11.05

"The world's output of gold in 1913 was estimated at $455,000,000, and the average for 12 years has been $409,910,000 per annum with a minimum of $298,812,000 in 1902, and maximum $474,333,000 in 1912.

"Political economists, some of whom I have mentioned, have expressed varied opinions on the gold standard, and it would be a very interesting subject for debate in your association, as to whether gold has depreciated, and all other commodities have correspondingly increased in value; though, gold is harder to obtain now, than, perhaps, at any other time in the world's history.

Some Pioneers in Canadian Banking.

"My early reference to the bank managers in Toronto, 30 years ago, brings to my mind the passing away of some notable men, such as R. H. Bethune, Duncan Coulson, John L. Brodie and Daniel R. Wilkie, men of outstanding character and originality. Let me relate a little personal incident regarding the last-named gentleman. He always asked me what was the news, when I would go into his office, and we would exchange ideas on the affairs and the finances of the day. On one occasion after the ending of the last Riel Rebellion, Mr. Wilkie called me in and whispered in my ear: 'Did you

I did not like to display my ignorance, but at the same time had heard nothing, and replied: 'No, Mr. Wilkie, what is it?' The popular banker replied, with a broad smile: 'I thought you knew everything; didn't you hear that Riel was hung to-day?'

"You gentlemen have been good enough to follow me in my attempt to describe the origin of money in coins and paper, and its equivalent in gold, the standard of value in all countries, with few exceptions, and you have listened patiently to what most of you already know, and I thank you for your patience. Perhaps I dwelt at length on the currency of Britain, though I forgot to mention that the British florin, or two-shilling piece, which you occasionally see, was coined with the intention of introducing the decimal system, but was not followed up. There have been recent suggestions of changes along the same line, and also of making British exchange payable in dollars and cents for convenience of America, but Britain is very conservative, and not likely to make innovations quickly."

SWEDISH FOREIGN TRADE ASSOCIATION

There was recently brought before the Swedish Chamber a bill providing for the creation of a corporation with the object of promoting foreign trade. Ten million kronor of government 5 per cent. bonds are to be issued, which will be deposited as security for bonds issued by the company. The money raised by the company is to be used to finance foreign purchases in Sweden, and the project is, therefore, aimed at continuing or increasing Sweden's exports to foreign countries. It was considered hardly suitable that this credit should be provided directly by the state, and it was decided that the best course would be that arrangements should be made through the medium of a private financial institution, subject to the control and under the guarantee of the state. Funds raised by the government loan within the country are, therefore, to be used to promote Swedish industry.

The capital of the company is to be 10,000,000 kronor, and is to be subscribed by the banks, with whom the preliminary agreement has been concluded. Credit will be furnished to foreign banks and bankers. The yearly dividend to the shareholders is not to exceed 6 per cent. of the capital. Payments to a reserve fund are also required, and the remainder is to be distributed in such a manner that two-thirds shall go to the company and one-third to the state. The board of the company is to consist of seven persons. The government is to appoint the chairman, the Riksbank and the national debt office one member each, and the shareholders the remaining four. The business of the company is to be concluded not later than the end of the year 1923.

PUBLICATIONS RECEIVED

Canadian Fire Insurance Year Book, 1918, containing complete details of all forms used in fire insurance, with summaries of laws and finances of companies and complete short-period tables. Published by Stone and Cox, 6—10 Johnson Street, Toronto. Price, $1.25.

Private Wealth of Australia.—By G. H. Knibbs, Commonwealth statistician of Australia. Published by the Commonwealth Bureau of Census and Statistics. This volume discusses the nature of national wealth and the distinction between private and public wealth. The total wealth of Australia is estimated by various means, such as income, probate returns, by inventory, etc. Similar estimates made in the United Kingdom, France, Germany and the United States are also compared.

Poor's Manual of Industrials for 1918.—The general information in this book has been revised to April 18th, 1918, and the book is the largest work of its kind. It contains the latest income accounts and balance sheets of all industrial companies in which there is a public interest. These are, in most cases, presented in a comparative form, showing at a glance the growth of the business. The book also gives complete information regarding the present income tax on industrial securities. It states whether the companies assume a 4 per cent. tax, or only 2 per cent. tax, or no tax at all. The work is invaluable to the investor or banker interested in industrial securities.

Poor's Manual Company, 80 Lafayette Street, New York. Price, $10 a copy.

FIGHTING LIFE AND PROPERTY FIRE LOSSES

Regulations Recommended for Municipalities, States and Provinces—Assistance of Public Required

Mr. Alcide Chausse, city architect and superintendent of buildings of the city of Montreal, and chairman of the committee on fire prevention of the American Society of Municipal Improvements, recently made his annual report to that society, noting the activities relative to fire protection during the past year.

The report noted the recommendations made at its last annual meeting of the National Fire Protection Association regarding the warfare against the needless sacrifice of human life and property by fire which were as follows:—

Recommendations of the Association.

1. The adoption by municipalities of the standard building code of the National Board of Fire Underwriters to the end that fire-resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings assured, and interiors so designed and firestopped as to make easy the extinguishment of fires therein.
2. The adoption by all states of minimum building requirements for the protection of state and county hospitals, asylums and similar institutions outside city limits and of small communities in which the establishment and enforcement of a building code is impracticable.
3. The enactment by each state of the fire marshal law advocated by the Fire Marshals' Association of North America to the end that official investigation may be made of the causes of all fires. Preventable fires may be eliminated by public education, and the crime of arson stamped out.
4. The adoption of the association's suggested ordinance providing for the systematic inspection of all buildings by city fire marshals or local firemen, to insure the vigorous enforcement of rules for cleanliness, good housekeeping and the maintenance of safe and unobstructed exits, fire-fighting apparatus and other protective devices.
5. The enactment of ordinances similar to that of Cleveland, Ohio, fixing the cost of extinguishing preventable fires upon citizens disregarding fire prevention orders, and a more general legal recognition of the common law principle of personal liability for damage resulting from fires due to carelessness or neglect.
6. The wider general use of the automatic sprinkler as a fire extinguishing agent and life saver, and the more general adoption of the fire division wall as an important life saving exit facility.
7. A careful study of the technical surveys of cities made by the engineers of the committee on fire prevention of the National Board of Fire Underwriters covering the items of water supplies, their adequacy and reliability, fire department efficiency, fire alarm systems and conflagration hazards; and of the possibility of co-operation among neighboring cities through mutual aid and the standardization of hose couplings.
8. The adoption of the association's suggested laws and ordinances for state and municipal regulation of the transportation, storage and use of inflammable liquids and explosives.
9. The universal adoption and use of the safety match and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings except in such fireproof rooms as may be especially approved for the purpose by fire departments.
10. The education of children and the public generally in careful habits regarding the use of fire.
11. The co-ordination of all these activities, through a central administrative officer or body of the state or city having primary jurisdiction, for the purpose of promoting uniformity of action and efficient co-operation.

The assistance of the public is requested, both in the dissemination of literature, and in the actual work of prevention.

The report then reviews the recommendations that have been adopted by various municipalities on the continent looking to reduction of fire waste—Kansas, Ohio, Louisiana, Chicago, Minnesota, Texas, etc. The report ends with a discussion of the treatment of chimneys and the penalty that should attach to neglect in keeping them clean; the by-law in force in Montreal is quoted as a model which would probably also be effective in other cities.

Name Your Executor

After toiling and sacrificing to acquire property, it is reprehensible for a man to leave his estate to be administered by an appointee of the court, instead of wisely making a Will and appointing an Executor of his own selection.

It is merest business foresight to see that one's Will names a **reliable, competent** and **willing Executor.** No individual Executor can give such constant attention and expert service in administering an estate as a Trust Corporation like this is experienced in giving.

DISTRIBUTION OF FEED FOR LIVESTOCK

Flour Not Forced on Canadian Market—Lower Grade Flour Means Less Feed

Frequent statements appear that mills are insisting upon dealers buying large amounts of flour in order to get feed. This is not the case, and has not been for some time, according to a bulletin just received from the educational division of the Canada Food Board. The bulletin goes on to say: "The mills are able to sell all the flour they can make for export to the Allies, for cash, and at a price equivalent to that allowed by the Canada Food Board to be charged to the Canadian trade, and there is no necessity for attempting to force sales in Canada, as otherwise might be the case, for feed cannot be made unless flour is made and can be sold.

"The Canada Food Board, the Feed Branch of the Department of Agriculture, and the millers have been working together for months upon the very difficult problem of the fairest method of distributing bran and shorts. The demand in Canada for these feeds is many times the total output of Canadian mills and comes from all parts of the country. The prices fixed for bran and shorts have made them relatively cheaper than other feeds, such as oats and barley, and this has increased the demand and, moreover, in many parts of the country, oats and barley were a short crop last year, as was also hay.

Extraction is Lengthened.

"The extreme need of our Allies in Europe for every pound of flour and every bushel of wheat that could be spared has necessitated the lengthening of the extraction in milling. Under ordinary conditions about 270 pounds of wheat would be used to make 196 pounds of flour, and allowing three pounds for waste there would remain 71 pounds of offal, but about 10 pounds of the lower grade flour would be added to the shorts to make middlings so that there would be a total of about 81 pounds of feed produced. Under the order now in force the mills must make 196 pounds of flour out of 258 pounds of wheat and cannot turn any back into the shorts, so that to-day only 59 pounds of feed is made in the process of grinding a barrel of flour and the richer feeds cannot be made at all. Taking an equal amount of wheat in each case, this means that almost 25 per cent. less feed is being made than before, which, of course, has made the feed problem still more difficult.

No Financial Object.

"It is entirely out of the question for the mills, under these conditions, to ship full carloads of bran and shorts to meet the demand for feed without causing users at other points to suffer. It would make no difference to the miller whether he sold in full carloads or in less than carloads, for his price to the trade is fixed at the same amount per ton in both cases, but the best and fairest method of distribution has required shipment in smaller quantities. If a dealer does not require flour or some other cereal produce to fill a car, this, of course, involves the payment by the dealer of the higher freight rate charged upon less than carload shipments. This difference in freight may run from $1 to $10 per ton, according to distance. Dealers are naturally anxious to avoid this extra cost, which might put them at a disadvantage as compared with competitors in the same district who could fill a mixed car, and although there is no extra profit to them the millers do not desire their customers to be at a disadvantage if they need oats, barley, oatmeal or flour which could be used to fill the car. There is, however, no such thing as compulsion on the part of the miller nor any financial object on his part in insisting, since he can make no more money by doing so and already has a bigger market for all his products than he can fill.

New Regulations in Force.

"The critical condition of food supplies for the Allies during the next few months has led the Canada Food Board to pass additional orders affecting wheat and flour. It has been made illegal for farmers, or anyone else, to use any millable wheat for feed for any kind of animals. Consumers are prohibited from accumulating stocks of flour beyond their actual current needs and must return to dealers any excess they may have been hoarding, and dealers must report their excess stocks which will be returned to the millers or disposed of as the Canada Food Board directs."

INFORMATION FOR LAND SEEKERS

In these days of increased activity in the interests of greater agricultural production, particularly of that readily exportable commodity—namely, wheat, it is imperative that all agencies shall render assistance in the furtherance of that nationally important movement. Authentic information, therefore, regarding agricultural lands that are not at present under cultivation, as illustrated in the maps, reports and bulletins, which contain particulars regarding the availability, accessibility to transportation and adaptability to agriculture of the free homestead lands in western Canada that are issued by the Department of the Interior, should prove useful to the prospective settler.

The rapid exhaustion of Crown lands in close proximity to the railway, that are available for homesteading, together with the recent reservation in the interests of returned soldiers' settlement, has resulted in an increased demand for information with regard to choicely located quarter-sections that might be available for purchase rather than homesteading. With the object in view of providing a source from which authentic information regarding agricultural lands that are likely to be purchasable might be obtained, the department, through its natural resources intelligence branch at Ottawa, has undertaken the compilation of lists containing the names and addresses of the owners of practically all quarter-sections that are at present unoccupied and non-producing, the presumption being that from either a financial or patriotic point of view, the owners would be interested in the sale or lease of their holdings.

Prospective settlers when applying to the department for information on the subject of either homesteading or purchasing land in western Canada should state the province or district in which they are interested as the literature embraces a rather wide range of maps and reports.

NEW ASSURANCE COMPANY IN AMERICA

The Australian Provincial Assurance Association, Limited, is planning to commence writing business in the United States and Canada. Mr. Selby P. Wood, the managing director, is at present on his way to San Francisco in this connection. While this company has been organized only six years, it has already become one of the most important of Australian companies. The head office is in Sydney, New South Wales, and branch offices are located in each of the other five states of Australia, and in New Zealand. The company writes life and accident lines. The annual report for the year ended October 31st, 1917, includes the following figures:—

Liabilities—	
Subscribed capital	£ 76,001
Funds and other liabilities	30,371
Total	£106,372
Total assets	106,372

The total revenue for the year was £110,245, including £47,801 of premiums on new life business and £23,290 of accident premiums. The life claims for the year amounted to £2,632, and the accident claims £6,705. Complete details will be found upon another page of this issue.

The progress of the company during its five years has been quite remarkable, the revenue and expenditure being as follows:—

	Revenue, less re-insurance.	Expenditure.	Increase of revenue over previous year.
1913	£ 10,219	£26,561	......
1914	17,287	30,950	£ 7,068
1915	28,662	30,858	11,374
1916	56,978	47,991	28,316
1917	101,258	85,276	44,280

Last year the company secured business exceeding £1,250,000 in the ordinary department, and accident premiums exceeding £23,000. This year they aim at £2,000,000 and £40,000, respectively. The business in the United States and Canada will be furthered by the establishment of a branch or by the formation of a subsidiary company.

BOARD OF TRADE AND CIVICS FOR WINNIPEG

A Comprehensive Plan to Include Many Special Organizations

A plan is being devised in Winnipeg to erect a body to be known as a Board of Trade and Civics, which would include in its membership the present Board of Trade, Industrial Bureau, Civic Improvement League, Citizens' Research League and many other local bodies. The matter was recently submitted to the Citizens' Research League for investigation and a definite plan has been prepared along the lines of the American City Bureau of New York, and the National Association of Commercial Organization Secretaries of Minneapolis. A plan is outlined in bulletin number ten of the league as follows:—

Representative business men and citizens generally recognize the desirability of one comprehensive Winnipeg organization commensurate with the growing importance of the city and province, and capable of working actively and unitedly for business and community progress. Much activity is now directed to these ends, but owing to the large number of unrelated agencies there is an immense waste of time, energy and money, and a consequent loss of general effectiveness through overlapping or needless competition. Membership in several bodies, which have scarcely sufficient reason for separate existence, often entails waste effort. As one example of lost motion, individuals frequently receive from three to six communications relative to the same matter from different associations. Lastly, the community suffers by the expenditure of effort which is merely sectional, and from the fact that the average citizen has not yet been brought to realize sufficiently his personal responsibility for the development of the whole.

The Benefits of Co-ordination.

"The benefits of co-ordination would be immediate and obvious. The multiplicity of membership fees and consequent expense to individuals would be lessened by the organization of one strong body efficiently managed and with departmental activities. A large saving would be effected in overhead charges alone. But more important, though less obvious, results would be achieved in the near future. Centralized effort along community lines would have beneficial consequences, such as could never be brought about by unco-ordinated sectional activities. Organization and co-ordination of the kind here suggested: (1) Would make it possible to coordinate more fully with the government in utilizing all energies and resources for winning the war and in making preparation for the difficult period of reconstruction; (2) would more effectively meet the urgent need of economy, public and private, and assist to increased production in manufacturing, mining and agriculture; (3) would help mobilize the services of the best available leadership in education, science, agriculture, mining, commerce and industry, for the systematic development of the community; (4) would make it possible to undertake definite programmes of work, not only for the city at large, but for the various interests represented; (5) would make a very much larger number of people feel themselves responsible for community progress.

Revised Ideas and Methods of Organization.

The war has tended to destroy many old ideas, amongst others sectionalism and unrestrained individualism. In Great Britain the government appointed committees on reconstruction have emphatically recommended large schemes of cooperation that will cover every department of the national life. In all directions in the United States old chambers of commerce have become revivified with the new idea of association for community ends, and in many places too numerous to mention, commercial organizations are being formed or reconstituted with definitely civic and community purposes. So widespread is the idea, that agencies have come into existence which devote themselves to conducting (with an avowedly civic purpose) reorganization campaigns for chambers of commerce and similar bodies.

The American City Bureau.

"Of these, the most successful is the American City Bureau, which claims to have organized upwards of 75 chambers of commerce. The plan of the bureau is to carry on rapid fire educational campaigns appealing for membership on an individual and democratic basis. The membership fee (subscribers are asked to pledge themselves to contribute for three years) is $25 for single memberships. The bureau looks upon general community problems as more important than any sectional or trade problem, and therefore rejects the idea of a mere federation of existing organizations, though in some instances there has been later creation of subsections for the consideration of the interests of special groups.

Outlines of Suggested Scheme of Organization.

"The desirability and, indeed, the necessity of building up an organization representative of all classes, interests and useful activities in the community have already been emphasized. The present war-time spirit of co-operation will be no less needed to meet the difficult period of reconstruction. Every class and every individual in the community can contribute something useful in common service. The Citizens' Research League gratefully acknowledges the valuable help it has received from Labor men on its committees and strongly suggests, particularly in view of the period of reconstruction, the desirability of having representatives of the various labor unions amongst the membership. This would give an opportunity for organized labor as such to be represented on the governing body and committees, etc., of the new organization. Similarly, representatives of all professions and Winnipeg officials of agricultural organizations should find a place in the reorganized board.

Basis of Membership.

"Membership should be on a personal basis with fee of $25 per annum, if possible pledged for three years. Firms and corporations should be invited to nominate for election to the board as many of their members or staff as will ensure participation in the board's activities and subscriptions to its working funds commensurate with their interest in the affairs and in the development of the city. Voting should be on the basis of one vote for each individual member. For example, a large wholesale firm might nominate for membership its executive officers and also heads of departments (the firm as such paying the fees)."

It is suggested that the officers should be a president, vice-president and treasurer, chosen by popular election, and a secretary appointed by the council, the latter body should consist of 20 members, ten to be re-elected each year. Certain section bureaus and standing committees should be appointed to deal with special questions It is anticipated that an institution of this kind would, through its size and strength, not only be able to promote the city's progress, but also be able to co-operate with outside organizations more easily than any of the smaller organizations of Winnipeg.

CONSCRIPTION OF WEALTH

They tell an old story in Dublin, Ireland, of a big private bank which became unpopular. At a meeting of protest many of those present lit their pipes with bills issued by the bank and passed a resolution asking holders of them to do likewise, thinking that burning its obligations would put the bank out of business. We have people in America with equally hazy ideas about banking and finance, including those who talk about confiscating wealth to pay the costs of this war.—New York Commercial.

CANNING TRADE TO BE LICENSED

The canning trade will be brought under the license system of the Canada Food Board by June 15th. Licenses will be required to engage in the manufacture for sale of canned or preserved fruits or vegetables, meats, poultry, soups, grains, and products made therefrom, jellies, jams, sauces, pickles. condensed, evaporated, dried or powdered or canned milk, or dried, evaporated or desiccated vegetables or fruits.

Licenses are not required when the canning factory is operated in connection with a commercial meat packing factory. The order issued by the Food Board also requires that no manufacturer of canned or evaporated fruits or vegetables, without the written consent of the Canada Food Board, shall at any time contract for the sale of more goods than he reasonably expects to be in a position to pack, and in no case shall the amount contracted for exceed 100 per centum of the average yearly delivery of such articles made by him during the four years preceding 1918.

IMPERIAL BANK OF CANADA

Proceedings of the Forty-Third Annual Meeting of the Shareholders, Held at the Banking House of the Institution, in Toronto, on Wednesday, 22nd May, 1918, at 12 Noon

The Forty-third Annual General Meeting of the Imperial Bank of Canada was held in pursuance of the terms of the Charter at the Banking House of the Institution, 22nd May, 1918.

THE REPORT

The Directors have pleasure in submitting to the Shareholders the Forty-third Annual Report and Balance Sheet of the affairs of the Bank, as on 30th April, 1918, accompanied by statement of Profit and Loss Account, showing the result of the operations for the fiscal year:—

The balance at credit of Profit and Loss Account carried forward from last year was	$1,164,876.20
The net profits for the year, after deducting the cost of management, paying of Auditors' fees, the interest due to depositors and after making provision for bad and doubtful debts and for rebate on bills under discount amounted to	1,185,066.71
Making a total at credit of Profit and Loss of	$2,349,942.91

This amount has been applied as follows:—

Dividends at the rate of 12 per cent. per annum	$ 840,000.00
Annual Contribution to Officers' Pension and Guarantee Funds	7,500.00
Contributions to Patriotic and other War Funds	27,500.00
War Tax on Bank Note Circulation	70,000.00
Contingent Appropriation to cover Depreciation in Bonds and Debentures	200,000.00
Balance of Account carried forward	1,204,942.91
	$2,349,942.91

During the year a Branch of the Bank at Ferintosh, Alta., has been opened as a sub-Branch to New Norway. The following Branches have been closed: In the Province of Ontario—Marshville, Port Robinson and Niagara Falls Upper Bridge Branch; in the Province of British Columbia—Arrowhead and Athalmer; in the Province of Saskatchewan—Pilot Butte.

The Head Office and Branches of the Bank, now numbering 126, were inspected during the year. The Auditors appointed by the Shareholders have also made their examinations as required by the Bank Act, and their report and certificate is attached to the Balance Sheet.

A further subscription of $25,000 (being the fourth for a similar amount) has been made to the Canadian Patriotic Fund, the payment of which will be made during the course of the coming year.

It is with deep regret that your Directors have to report the loss of their co-Director, Honorable Richard Turner, of Quebec, whose death occurred on December 22nd, 1917. He occupied a seat on the Board since May, 1906. His place has been filled by the election of Mr. E. Hay.

The Directors testify with pleasure to the loyalty, zeal and faithfulness of the staff, which under the present conditions is laboring under a heavy strain. It is the intention to ask your authority to contribute substantial sums to the Pension Fund of the Staff.

All of which is respectfully submitted.

PELEG HOWLAND, President.

AUDITORS' REPORT TO SHAREHOLDERS.

We have compared the above Balance Sheet with the books and accounts at the Chief Office of Imperial Bank of Canada and with the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on 30th April, 1918, we certify that in our opinion such Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice, have in our opinion, been within the powers of the Bank.

G. T. CLARKSON, F.C.A.,
R. J. DILWORTH, F.C.A.,
of Clarkson, Gordon and Dilworth.

The number of Shareholders in the Bank has been increased during the year from 1,879 to 1,921.

The customary motions were made and carried unanimously.

Mr. G. T. Clarkson, F.C.A., Toronto, and Mr. R. J. Dilworth, F.C.A., Toronto, were appointed Auditors of the Bank for the ensuing year.

The Scrutineers appointed at the meeting reported the following Shareholders duly elected Directors for the ensuing year: Messrs. Peleg Howland, Elias Rogers, William Ramsay (Bowland, Stow, Scotland), Cawthra Mulock, William Hamilton Merritt, M.D., (St. Catharines), Sir William Gage, Sir James Aikins, K.C., (Winnipeg), Hon. W. J. Hanna, M.P.P., John Northway, J. F. Michie, J. W. Woods, E. Hay.

At a subsequent meeting of the Directors, Mr. Peleg Howland was re-elected President, and Mr. Elias Rogers Vice-President for the ensuing year.

PELEG HOWLAND, President.
E. HAY, General Manager.

VICTORIA, THE GARDEN CITY OF CANADA

Progress in Shipbuilding—Great Increase in Export Trade —Many Municipal Improvements

(Staff Correspondence.)

Victoria, May 23, 1918.

Victoria, the capital city of British Columbia, is fast becoming a thriving industrial centre for shipbuilding. During 1917 and the first four months of 1918 no less than seven vessels were launched. These vessels have a carrying capacity of 1,500,000 to 1,750,000 feet of lumber each, and are equipped with auxiliary, gas fuel, engine power. They were all loaded with lumber and sent away to various overseas ports, but with one or two exceptions they have been diverted from carrying lumber and are now being used for other purposes. The Cameron-Genoa shipbuilders are now engaged in a contract with the Imperial Munitions Board for four wooden vessels, to be driven by steam engine power, one of which is launched, and the remaining three are nearing completion and will soon be off the ways.

The Foundation Company, Limited established a shipyard, almost adjoining the Cameron-Genoa Shipbuilders' yard, during the summer of last year. They have a contract with the Imperial Munitions Board for five wooden vessels, 250 feet long, with a dead-weight carrying capacity of about 2,800 tons. Three vessels have been launched by this company and two will soon be ready to leave the slips.

Orders from the Imperial Munitions Board.

Contracts made with the Imperial Munitions Board are for vessels of standardized design in respect to both hull and machinery, and as soon as the hulls are launched they are taken by the board to Pier No. 2, at Ogden Point, where the machinery is installed. The engines are triple expansion, developing 1,000 indicated horse-power, two marine boilers of the Howden water tube type, three furnaces, with forced draught, for either coal or oil.

Our outer docks, Piers 2 and 3, under construction by Messrs. Grant, Smith and McDonnell, Limited, since May, 1914, were completed in March, 1918, at a total cost of $2,440,000, the work during the past year consisting of filling behind the parapet walls. The amount of filling placed during the year was 510,000 cubic yards.

In October, 1917, the same firm started the construction of a freight shed, 700 feet by 200 feet, on Pier No. 2, with a ferry slip off the bulkhead north of Pier No. 3, and the necessary connecting trackage of nearly 1½ miles.

Exceptionally good progress was made with the shed and the Imperial Munitions Board were able to take over occupancy of it early in January, while the ferry slip was in operation before the end of March. The total cost of the shed, which is the largest on the Pacific coast, was $218,000, while the track and ferry slip cost $65,000,000.

Trade of Victoria.

The following are the principal trade returns for the 12 months ended March 31st, 1918, compared with the preceding similar period:—

	1918.	1917.
Imports	$ 6,714,324	$ 6,828,375
Exports	4,690,703	600,523
Customs collections	1,170,786	1,075,869
Inland revenues	158,329	215,542
Bank clearings	88,390,038	80,708,690

As a place of residence Victoria is unique. Nature has provided advantages in respect to climate and scenery, but the citizens have supplemented these with an ample supply of good water for domestic and manufacturing purposes, and this together with the excellent systems of sewage, surface drains, street cleaning, garbage collection and disposal, is reflected in the citizens' general good health and low death rate. About 70 miles of the streets are paved, and the city is furnished with ample electric light.

Although Victoria is situated on an island there are practically no disadvantages. Freights are handled in cars, and connected with the transcontinental railways by car-ferry barges. Passenger traffic is carried on fast, seaworthy vessels, on which comfort is unsurpassed and worthy of the reputation of the operators, the Canadian Pacific and Grand Trunk Railway companies. Other coastwise services are provided by the Union Steamship Company and the steamship "Sol Duc."

CANADA PERMANENT ACQUIRES NEW BRANCH

Oxford Permanent Loan and Savings Society To Be Absorbed by Canada Permanent

It has been announced that arrangements have been made for the purchase of the Oxford Permanent Loan and Savings Society of Woodstock, by the Canada Permanent Mortgage Corporation. The Woodstock company is one of the oldest loan companies in western Ontario, having been established 52 years ago. While its business has been confined for the most part to Woodstock and the vicinity, its administration has been very sound, and a large reserve has been accumulated. The capital stock amounts to $291,640, and the reserve is now $144,300. Deposits, with interest, total $357,242, and debentures, with interest, $246,555. The total liabilities are somewhat over $1,000,000. Most of the assets are invested in real estate mortgages. There are also over $180,000 of government and municipal debentures, some stock owned by the company and some loans on stocks and debentures. The company's mortgages are practically all secured on real estate in Woodstock and in Oxford county, and are, therefore, all of the very best grade.

Shareholders to Receive Par and One Half.

The shareholders have been receiving 7 per cent. per annum in dividends, and it will be observed, the reserve fund account is just about 50 per cent. of the capital stock. According to the arrangement between the directorates of the companies, each shareholder in the Oxford Permanent will receive $150 of Canada Permanent 5-year debentures bearing 5½ per cent. interest in exchange for every $100 of Oxford Permanent stock; his interest return will, therefore, be 8¼ per cent. in place of 7 per cent. as formerly. The exchange appears to be an attractive one to the Oxford Permanent shareholder, as the Canada Permanent is one of the oldest and strongest Canadian loan companies, having a paid-up capital of $6,000,000, and a reserve fund of $5,000,000, both of which are behind the debenture issues.

The agreement is subject to the approval of the shareholders of the respective companies, for which purpose a special meeting of the Oxford Permanent is to be held in Woodstock on July 10th and by the Canada Permanent in Toronto on July 23rd. As some of the Canada Permanent stock is held abroad, it was necessary to postpone their meeting in order to properly notify the foreign shareholders. The business is to be continued in Woodstock as a branch of the Canada Permanent, and the facilities of the Canada Permanent Trust Company will also be offered there. Mr. Malcolm Douglas, who has been managing director of the Oxford Permanent for a number of years, will continue in the management, and the same staff will also be employed. The regular half-yearly dividend at the rate of 7 per cent. per annum has been declared by the directors of the Woodstock Company, and will be paid as usual on July 2nd, 1918.

The debenture holders and depositors of the Oxford Loan will also benefit by reason of the large assets of the Canada Permanent and its sound financial position. The Canada Permanent, on the other hand, acquires a business which has been long established and enjoys an excellent reputation, in one of the wealthiest sections of Ontario, and reputed to be the best agricultural district in Canada.

LONDON STREET RAILWAY COMPANY

The Board of Conciliation working on the wage adjustment between the London Street Railway Company and its employees met with a special session of the city council on Tuesday afternoon. The council backed up its refusal to the company of the right to increase its fares. The company claims it is unable to grant an increase to its men at the present revenue.

That the apple crop of Nova Scotia will be away below normal, even if it is not a complete failure, is indicated by the poor showing of blossoms. In several sections a frost recently destroyed the blossoms of the early varieties. On account of the prospects many orchardists are abandoning spraying operations.

Atlas Assurance Company, Limited

OF LONDON, ENGLAND

(ESTABLISHED 1808)

Extracts from the Report for the Year ended 31st December, 1917.

FIRE DEPARTMENT

The NET PREMIUMS were **$6,963,490**, and the LOSSES **$3,262,141**. The underwriting profit of the account after increasing the reserve for unexpired risks by **$282,741**, amounts to **$817,315**, which has been transferred to Profit and Loss Account.

G. T. SOMERS, President.
A. H. WALKER, General Manager.

AUDITOR'S REPORT

This statement has been duly vouched by comparing all entries with the books at the Chief Office and certified Returns from the Branches, and in my opinion is properly drawn up so as to exhibit a correct view of the condition of the Bank.

Cash and Securities have been checked at the Chief Office at 30th April, 1918, as well as at another time during the year, as required by section 56 of the Bank Act.

I have obtained all the information and explanations required, and am of the opinion that the transactions of the Bank, which have come under my notice have been within the powers of the Bank.

SHERMAN E. TOWNSEND, C.A., Auditor.

NEW INCORPORATIONS

Fuel Company Capitalized at $5,000,000 and Mining Company Capitalized at $3,000,000 Receive Charters

The largest company incorporated during the past week was the Canadian Western Fuel Company, Limited, with a capital stock of $5,000,000, and head office at Nanaimo, B.C. The Hill Gold Mining Company, Limited, of Toronto, with capital stock of $3,000,000, receives charter.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Sandon, B.C.—Silversmith Mines, Limited, $750,000.

Kelowna, B.C.—Cawston Canning Company, Limited, $20,000.

Nanaimo, B.C.—Canadian Western Fuel Company, Limited, $5,000,000.

Hatzic, B.C.—Trufruit Products Manufacturing Company, Limited, $50,000.

Ottawa, Ont.—Irving's, Limited, $20,000; S. Vineberg, C. M. Cotton, R. Stuart.

Quebec, Que.—Mile End Milling Company, Limited, $200,000; E. Turgeon. E. Turgeon.

Port Stanley, Ont.—Howe Fish Company, Limited, $25,000; J. Howe, H. A. Short, A. Grant.

Hamilton, Ont.—Walker-Vallance, Limited, $40,000; F. J. Walker, W. E. Vallance, C. V. Langs.

Winnipeg, Man.—Allied Securities, Limited, $100,000; W. T. Maddaford, T. D. Fenly, A. W. Lewis.

Stratford, Ont.—McDermid and Kyle, Limited, $40,000; T. J. Kyle, M. A. McDermid, E. McDermid.

Kamloops, B.C.—Mountain Sawmills, Limited, $50,000; Canoe River Lumber Company, Limited, $10,000.

Emo, Ont.—Langstaff Mercantile Company, Limited, $40,000; C. R. Langstaff, R. B. Langstaff, F. C. Gill.

Carey, Limited, $10,000.

Loading at Montreal is a big Russian steamer, one of a fleet of thirteen ships taken over by the British government in part payment of the debts repudiated by the Bolsheviki government. The commandeered steamers will add 130,000 tons to the shipping at the disposal of the Allies.

NOVA SCOTIA MINING FOR THE YEAR

The annual report of the Department of Public Works and Mines of Nova Scotia for the year ended September 30th, 1917, shows a considerable falling off in the output of coal and a decided increase in the output of gold. In the coal industry the shortage of men in the collieries and inadequate means of transportation were acutely felt as compared with the previous year. The output of coal decreased by 692,811 tons, and the sales by 790,636 tons. The reductions were mostly in the shipments to Quebec and to the United States. There was a small increase in the amount sold within the province, and the quantity on hand at the end of 1917 is somewhat more than the amount held at the end of 1916. The total coal production was 5,803,660 tons, compared with 6,496,472 tons for the previous year. The falling off in the gold output is attributed to the great scarcity of, and the advance in the cost of, labor and materials. The gold production for the year was 2,296 ounces, as compared with 4,963 ounces for the previous year, or less than one-half.

The production of gypsum, cement blocks, pig iron and steel ingots increased somewhat. A total revenue of $740,687.28 from mining was derived by the province, most of which came from the royalty on coal and from rentals. A number of borings were made during the year by the government department, some of which were successful in reaching coal.

Drawings are included in the report regarding the production of coal in Nova Scotia during the past thirty years. These show that the number of men employed increased from a little over 4,000 in 1898 to over 12,000 in 1908. After a slight decline from 1908 to 1910, the number then increased to over 14,000, since when it has dropped to about 10,000. The variations in production follow approximately the same course, although there has been a gradual increase in the output in tons per man.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

The following table, compiled by *The Monetary Times*, shows the volume of bank loans to municipalities since January, 1915:—

	1915.	1916.	1917.	1918.
January	$35,952,805	$32,015,371	$24,487,272	$40,015,466
February ...	38,437,903	35,149,915	26,121,324	43,535,628
March	41,227,449	38,649,462	29,877,911	50,652,061
April	43,031,360	44,371,050	35,931,996	55,685,350
May	43,948,436	43,924,036	39,790,191	....
June	46,889,816	46,773,032	42,757,673	....
July	44,029,446	42,385,096	43,989,207	....
August	46,020,730	39,882,811	43,940,176	....
September ..	43,928,331	38,708,745	42,721,563	....
October	45,682,230	37,613,530	41,204,781	....
November ..	41,064,550	32,945,963	36,459,598	....
December ..	30,878,028	24,056,797	36,353,039	....

Truro, N.S.—Messrs. J. C. Mackintosh and Company, of Halifax, have purchased a block of $22,600 6 per cent. 30-year refunding bonds at 97.27.

Fitzroy, Ont.—Messrs. C. H. Burgess and Company, of Toronto, have purchased a block of $7,000 6 per cent. bonds, payable in 25 annual instalments.

York Township, Ont.—Messrs. W. L. McKinnon and Company, of Toronto, have purchased a block of $7,060 6½ per cent. bonds, payable in 10 annual instalments.

Smith's Falls, Ont.—Messrs. Neely's, Limited, of Toronto, have been awarded a block of $28,000 6 per cent. consolidated debt debentures, payable in 20 annual instalments.

County of Lincoln, Ont.—A block of $150,000 6 per cent. 10 and 20-year bonds has been awarded to the Dominion Securities Corporation, of Toronto. The issue was sold at 99.17.

Quebec, Que.—The civic issue of 6 per cent. bonds, offered to the public, met with a successful close last week. The whole amount of the loan of $470,000 was fully subscribed.

New Westminster, B.C.—Sealed tenders will be received by R. S. Gilchrist, city treasurer, up till June 10th, 1918, for the purchase of $500,000 6 per cent. 5-year bonds, authorized by special act and secured by various bond issues.

Red Deer, Alta.—Tenders will be received by A. T. Stephson, city commissioner, until June 21st, for the purchase of $24,000 6 per cent. treasury bills, payable in one, two and three equal annual instalments. Interest is payable semi-annually at the Bank of Montreal at Toronto, Montreal, Red Deer and New York City.

Sherbrooke, Que.—The city's bonds to the amount of $500,000 have not as yet been placed on the market, and may not be for some time, according to the information received at Sherbrooke, from Hanson Brothers, who are handling the bonds.

Montreal, Que.—The loan of $2,500,000, with interest at 6 per cent., issued by the Central Catholic School Commission of Montreal, has been oversubscribed, according to reports from that city. The loan comprises $1,500,000 5-year gold bonds and $1,000,000 2-year treasury gold notes, issued in denominations of $100, $500 and $1,000, with semi-annual interest. This loan was offered at par without commission, and the Bank of Hochelaga pays interest and principal for the commission.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from May 13th to May 17th, 1918:—

School Districts.—Springwater, $2,300 10-years not ex. 8 per cent. instalment; R. F. Watson, Springwater. Schoeman, $400 10-years not ex. 8 per cent. instalment; D. J. Weins, Herbert. *Flinton, $2,000 10-years not ex. 8 per cent. annuity; Mrs. May Rolufs, Handsworth. *Northgate, $1,200 10-years not ex. 8 per cent. annuity; H. C. Holloway, Northgate. Newport, $2,300 10-years not ex. 8 per cent. annuity; Wm. F. Beck, Forres. *Rosefield, $2,500 10-years not ex. 8 per cent. annuity; M. F. Klotz, Coriander. Rosetown, $5,000 10-years not ex. 8 per cent. annuity; W. Maseltine, Rosetown. Sunshine, $2,500 10-years not ex. 8 per cent. annuity; Sinai Briere, Jr., Billiman. Beehive, $2,500 10-years not ex. 8 per cent. annuity; B. Pugh, Ruthilda. Mawer, $4,000 20-years not ex. 8 per cent. annuity; J. Nouch, Mawer. Hill Sixty, $2,300 10-years not ex. 8 per cent. annuity; Wm. Palin, Craigsland. Little Cut Arm, $1,600 10-years not ex. 8 per cent. annuity; Wm. N. Carney, Hazel Cliffs.

Rural Telephone Companies.—Neptune, $8,900 15-years not ex. 8 per cent. annuity; W. H. Stovin, Neptune. Garden Valley, $1,800 15-years not ex. 8 per cent. annuity; W. H. Holman, Outlook. Turvin, $13,000 15-years not ex. 8 per cent. annuity; S. R. Fakeley, Kindersley. Cotham, $1,350 15-years not ex. 8 per cent. annuity; E. Kendrick, Cotham. Short Creek, $4,600 15-years not ex. 8 per cent. annuity; H. A. Koehm, Roche Percee. Clayton, $500 15-years not ex. 8 per cent. annuity; Chas. Detweilker, Gainsboro. Dunleath, $17,000 15-years not ex. 8 per cent. annuity; W. Redlach, Dunleath. Lorndale, $1,050 15-years not ex. 8 per cent. annuity; J. D. Woodard, Colgate.

Rural Municipality of Montmartre, $1,200 10-years not ex. 8 per cent. instalment; H. Browning, Montmartre.

The following is a list of debentures reported sold from May 13th to 17th, 1918:—

School Districts.—Kalyna, $1,200; Nay and James, Regina. Martindale, $2,200, Viewland, $2,300; Waterman-Waterbury Manufacturing Company, Regina. Beblo, $1,500; Saskatchewan Life Insurance Company, Regina.

Rural Telephone Companies.—Deer Lodge, $1,000, S. Flaxcombe, $8,400; W. L. McKinnon and Company, Regina. Holyrood, $9,900; Kerr, Fleming and Company, Regina. S. Girvin, $1,000; Wm. Orken, Girvin..

Town.—Govan, $3,000; Wood, Gundy and Company, Saskatoon.

NEW BRUNSWICK BONDS

Messrs. Wood, Gundy and Company, of Toronto, have purchased a block of $70,500 5 per cent. bonds, due August 1st, 1937.

ONTARIO SELLS MORE BONDS

The province of Ontario has sold an additional $1,000,000 of bonds to the same syndicate which recently purchased the $3,000,000 issue. The price received was the same, viz., 100.49 and interest. The provincial treasurer considered that, in view of the good market for bonds of this kind at present, it was better to provide for all of the province's immediate needs. It is understood that most of the issue has been cleared off the market, although small amounts are still for sale.

FINANCES OF KENORA

The town of Kenora, Ontario, which has just issued its annual financial report for the year 1917, appears to be in a satisfactory financial condition, except for the fact that a considerable sum of taxes is unpaid. The town operates all its own public utilities, which are valued as follows: Electrical department, $601,443.21; telephone plant, $41,393.56; general utilities, $24,304.62. There are $768,773.73 of debentures issued in connection with these utilities, but after making allowances for sinking funds, etc., the net liabilities outstanding against the utilities total $676,703.01, so that there is a substantial surplus of assets over and above liabilities. The other assets of the town are valued at $485,117,10, and the funded debt and other obligations total about $300,000. The receipts for the year from the public utilities total $97,672.12, and, after paying all expenses, including extensions, sinking fund, etc., a surplus of $7,840.84 was paid into ordinary municipal funds. The ordinary income of the town for the year was $131,005.70, including some advances from the Imperial Bank. Some matured debentures were paid off during the year, and considerable expense was incurred on account of the Tourist Hotel Company. The collection of the outstanding taxes will be necessary, and it is evidently the intention of the town to take every possible step in this direction.

According to a despatch from Milan, Italy, the adoption by Austria of the German mark as the unit of currency is a part of the Austro-German treaty.

A PLEA FOR MINING IN BRITISH COLUMBIA

Industry Should be Developed as Factor in War—United States Capital Gaining Hold

"Being in the mining business, and having dealt in mines more or less for the past 20 years," said Mr. Donald Cramer, of Vancouver, in an interview with *The Monetary Times*' special representative, "one is struck with the incongruity of things when he sees a heading in the paper as follows: 'The Dominion government has agreed to purchase all the pig-iron manufactured in British Columbia during the next three years at current rates,' and then further on a statement made by Sir Robert Borden, which, while not made altogether in connection with the mining business still has a bearing on it, that the Dominion government has not an inexhaustible supply of money.

"The first statement was made in answer to a delegation of reputable business men from the province of British Columbia, asking the Dominion government to aid in starting the iron and steel industry in the province of British Columbia. They, no doubt, made an appeal to the government, not only from an economic, but also from a patriotic standpoint. If the war is going to continue much longer, and there are no signs of abatement yet, we are going to need all the iron and steel that can be produced in British Columbia and elsewhere in Canada, as a war measure, and while at the beginning of the war, before munition plants had started in Canada, millions of dollars were advanced to manufacturers of munitions in the United States by the Munitions Board to enable them to produce munitions for the Allies, until such time as our own plants could start and get into proper shape, do you not think it would be a wise plan for the government to look upon the iron and steel industry in British Columbia in the same light as the manufacture of munitions was looked upon in the early days of the war?

"We read with a great deal of interest that the United States government has given an order to the shipbuilding plants in Seattle for ships, amounting to a hundred million dollars, the reason being that the yards in the east were crowded with work. In order to facilitate the building of ships, and to give the whole country a fair chance, this immense order was placed in the west.

Conditions are Suitable for Steel Industry.

"Now there is no reason to believe that all the iron and steel manufactured in eastern Canada cannot be absorbed by eastern Canada itself, and a great deal more. Then why should not this idea apply in the same way to the iron and steel industry in British Columbia, and why should not the Dominion government develop such a scheme? This is not only patriotic—it is good business.

"This bugaboo of not having the minerals is not right. We have the minerals,—we have some of the finest minerals in the world with which to manufacture steel. Some of the most eminent engineers from foreign countries, such as Norwegians, Swedes and men from the United States, have passed upon our ore, and every one of them is high in the praise of British Columbia iron ore. A mere promise to buy all the iron and steel made in British Columbia during the next three years, while it adds a certain zest to the industry, is really nothing more or less than a nicely phrased shelving of the matter. Personally I am not in the stock jobbing business, but am dealing with the properties themselves, and for the information of the Canadian public I may say that there are several groups of very wealthy Americans who are buying up properties in British Columbia with the view of holding and developing them later, or with the view of developing them and shipping the raw material to the States of Washington, Oregon and California, and there manufacturing, and no doubt reselling to us our own original product fabricated in a foreign country.

"From the viewpoint of a resident of the United States this is all well and good, but from the viewpoint of a Canadian and a citizen of the British Empire, it is all wrong, economically wrong.

"The people in British Columbia are not a wealthy people; most of the people here enjoy a good living, but there is no great personal wealth, and one part of the country has got to help the other, so why do not the wealthy Canadians who are attracted to this class of investment make their investments in British Columbia instead of in foreign countries?

"We have often heard it said that so many deals have been "put over," as it were, on unsuspecting investors. Very often it is the unsuspecting investor, as he calls himself, who invites these particular deals. Men who go into this class of business must be prepared to see the thing through to a finish. We have a great many examples in British Columbia of success attained in the mining field, and simply because the people who invested their money in mines stayed with it and developed it, as they would an ordinary business. Mining after all is a business; it can be made a speculation the same as anything else; but mining run in a businesslike manner and run on a business basis in the aggregate pays as well as any other business.

Energetic Department of Mines Needed.

"Another thing strikes one as rather out of the ordinary. The Department of Mines, which is maintained by the province for the benefit of the public, and is there to investigate deposits and see what can be done with them, frequently makes reports which are quite unintelligible. A live department would be a great boon to the province and to Canada, and they should keep their ears to the ground, as it were, and as soon as they heard of new discoveries, and as soon as they heard of minerals that would be of value to the country, they would have men on the spot to investigate, and men to give a report on that particular mineral without fear Sometimes their judgment may be at fault, but still it is better to give a thorough report as to what an engineer sees and what he thinks than to issue a report in such a way that the meaning is obscured to the public.

"I would suggest that branches of the Mining Department should be placed in every mineral province in Canada, with active heads in charge of each branch, whereby properties could be investigated with the least possible delay, and the results given in plain, understandable language.

American Capital Acquiring Hold on Properties.

"Finally, I would further suggest that some of our wealthy eastern capitalists should take it upon themselves to aid in developing the mineral resources of British Columbia instead of leaving it to the people from the United States, who are, as I have previously stated, tying up several properties with a view to either holding them, or developing them so that the raw material can be manufactured in the United States, much to the detriment of Canada as a whole, and it is only by the development of our natural resources that we can ever think of being able to wipe out our immense debt, and if our resources in this province were developed, it would not take long for them to place the country on a sound economic basis, and provide for the wiping out of our war debt, besides being primarily a patriotic duty."

ENORMOUS EXPENDITURE ON RAILROADS

The railroad administration of the United States has prepared a budget providing for a capital expenditure of $1,000,000,000 on the railroads, for means and equipments. This sum is approximately equal to the total capital expenditures of the railroads for the past three years. Practically all of the sum is to be expended for additions and betterments and for equipment, only a small item of $18,000,000 being allowed for extensions.

DOMINION BANKRUPTCY BILL

The Bankruptcy Bill, introduced at the opening session of the Dominion House by Mr. S. W. Jacobs, of Montreal, has been under consideration by the special bankruptcy committee of the House. The bill as drafted is based largely upon English law, the principles of which are adjusted to Canadian conditions. There has been no comprehensive Canadian act on bankruptcy for some thirty years, and the system prepared in this act is expected to be more satisfactory, both to creditor and banker. The bill has been discussed with accountants and lawyers of several of the provinces, and several weeks ago a deputation of Ontario accountants went to Ottawa in order to suggest certain amendments to the draft. A final draft has now been completed, which will be printed by the committee and circulated among the various associations and accountants for consideration and criticism. Nothing further will, therefore, be done until the next session of the legislature, when it is expected that a bill with any further amendments which may be deemed advisable will be passed.

SENDING MONEY BY MAIL

Liability of Sender—Method of Sending Not Always Specified

BY M. L. HAYWARD.

If A sends B money by mail to pay a debt, and the same is lost, it is a serious matter for one or the other. If the money were sent under such circumstances that the sending constituted a payment of the debt, then B is the loser. On the other hand, if A were not justified in sending the money by mail, then he must pay it over again.

In this connection a case recently decided by the King's Bench Court of England is instructive. In the case mentioned an insurance company sent a notice to a debtor, requesting him to pay a debt of £48, at the office of the insurance company, and asking him "when remitting," to return the notice.

The debtor sent the company the £48 in treasury notes by registered post, but the parcel was stolen before it reached the company, and they never received the money. The question then was whether sending the money by registered post under the above circumstances constituted a payment of the debt.

The King's Bench Court held that the company, by using the words, "when remitting," in the notice, impliedly authorized the debtor to remit through the post in the *ordinary* way, so that, if the remittance by post had been made in the usual way, it would have cleared the debtor.

On the other hand, however, the Court also held that sending as large an amount as £48 in treasury notes by post was not a remittance in the *ordinary* way, that the debtor therefore had failed to prove that he had paid his debt, and that he was bound to pay it over again.

If no intimation is given, however, of the manner in which money should be sent, a little different question arises, and in this connection a case recently decided by the Washington Supreme Court lays down the principle governing such cases, and makes rather interesting reading.

In this case a resident of Garrison, Montana, was a depositor at a bank in Deer Lodge in that state, and asked the bank to forward to him $2,500 in cash to his address in Garrison. As a matter of banking convenience the Deer Lodge bank asked a bank in Helena, Montana, to forward the cash to the depositor at Garrison, and the Helena Bank made up the cash in five, ten and twenty dollar bills, and registered it in the post office at Helena addressed to the depositor at Garrison. The registered package never reached the Garrison post office.

The day after the package should have arrived at Garrison, a Japanese employee of the railway company, whose duty it was to take the mail bags from the depot to the post office, obtained leave of absence and started for his old home in Japan. When he reached Seattle, he made a number of purchases of "goods, wares and merchandise," a watch, a diamond ring, a motorcycle, drafts on banking houses in Japan and a ticket from Seattle to Japan. In all he paid out about $2,400 in five, ten and twenty dollar bills.

Then, just as he was going aboard the steamer, he was arrested by the officers, taken back to Montana, and placed on trial for the theft of the registered package. The Jap decided that he needed legal assistance, and employed an attorney to defend him, who, naturally, not wanting to work for his health, took a claim on the watch, ring, motorcycle and one of the bank drafts which the Jap had purchased with the money which the government alleged had been stolen from the registered package. These articles had been taken from the Jap by the officers who arrested him, used as evidence against him on his trial in Montana, and then brought back to Seattle, where the attorney brought suit against the officer holding them and the bank at Helena which sent the money, claiming the articles or their value.

Mailing Did Not Constitute Delivery.

At the trial the first point raised by the attorney was that when the Helena bank addressed the package of money to the depositor at Garrison, and registered it in the Helena post office, it was a delivery to the depositor which vested the ownership in him, and that the depositor would be the only party who could make a claim for the money, or the articles purchased with it, and that the Helena bank would have no claim in any case.

The Court decided against this view, holding that the sending of the registered package as stated above was not a delivery to the depositor, that the title therefore still remained in the bank, and, after pointing out that "it is undoubtedly a general rule that when goods are ordered by a purchaser from a dealer without any stipulation as to the manner of their delivery, a delivery of the goods by the dealer to a common carrier for the account of the purchaser, is a delivery to the purchaser, subject only to the right of the dealer to stoppage in transit," went on to say:—

"But it seems that the present case is not a case of the ordering of goods to be delivered in the ordinary way, but is more in the nature of the payment of an obligation. If it be a fact that the Deer Lodge bank receiving the original order from the depositor was indebted to the depositor, or obligated in some way to him for the payment of the money demanded, it would not be a compliance with this obligation for it to deposit in the United States mail a package containing the money addressed to the depositor. A creditor has the right to payment in person or through his duly authorized agent, and a debtor cannot select an agent for him, even although the agent selected be the United States mail, or some other common carrier.

"So in this case, contrary to the presumption that might arise in the sale of goods, delivery in the mails of a package containing the money addressed to the consignee in the the absence of some showing of an agreement or custom to that effect, does not raise the presumption that the carrier was the consignee's agent. In fact, the presumption is the other way. The money is presumed to belong to the sender till after the receipt by the person to whom it is sent, and if the same is lost in the mails, it naturally follows that the sender, and not the consignee, must stand the loss."

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended May 24th, 1918:—

Dominion Reduction Company, 86,000; Nipissing Mining Company, 65,045; Mining Corporation of Canada, 196,435; Buffalo Mines, 175,552; Coniagas, 144,106; O'Brien, 126,865. Total, 794,003.

The total shipments since January 1st now amount to 10,198,873.8 pounds, or 5,009.3 tons.

SHORTAGE OF HELP IN BANKS

The Canadian Bankers' Association, on behalf of Canadian banks, is requesting the co-operation of the public in meeting the shortage of bank clerks. Customers are requested to transact their banking business in the morning as far as possible, and to avoid a rush at closing time. It is also asked that small payments be made in cash rather than by cheque on the bank. The banks are also discontinuing receiving payments for tax bills and bills of gas, electric and other public service corporations. On and after June the 1st the banking hours will be 9.30 to 2.30, and on Saturdays, 9.30 to 12. This arrangement is intended to give the staff more time to complete the large amount of work which cannot be taken up until after the office is closed to the public.

COMMONWEALTH BANK OF AUSTRALIA

The annual report of the Commonwealth Bank of Australia for the year ended December 31st, 1917, shows total current deposits of over £30,000,000, and savings bank deposits of over £13,000,000. The total liabilities are over £47,000,000, including the reserve and redemption funds. The bank holds almost £13,000,000 of British, colonial and Commonwealth securities, and has also £5,820,000 of coin, bullion and cash balances. The profits for the half-year ended December 31st, 1917, were £232,659, one-half of which was carried to the reserve fund and the other half to the redemption fund. There is now at the credit of each of these funds the sum of £379,475. The bank has twenty-nine branches in Australia, and has agents and correspondents throughout the world. In Canada its business is attended to by the Canadian Bank of Commerce and by the Bank of British North America.

CONDITIONS IN ALBERTA AND EDMONTON

Greatly Increased Acreage—Backward Weather But No Damage—Snowstorms Supply Needed Moisture

(Staff Correspondence.)

Edmonton, May 23, 1918.

In Central and Southern Alberta a very conservative estimate of the increase in wheat acreage would put it at 20 per cent., with possibly a considerably larger increase in the northern part of the province. *The Monetary Times'* representative was given access to reliable reports from practically 100 important centres by the manager of one of the large farm implement firms in Calgary, and from these a very satisfactory outlook at date of writing is shown. Seeding is completed and under the most favorable conditions. The weather for the past two weeks has been somewhat backward, but no damage is reported. The increase in acreage in oats and other crops from the above-mentioned reports could be placed at 25 per cent. The season is easily two weeks ahead of last year. Cultivation this spring has been the best in years. Several good falls of snow in the past week have been a great help in supplying the necessary moisture, and while good, warm rains are needed, nothing is suffering at this date. Hay and fodder crops are in excellent shape.

Edmonton Facing Problems.

Under the guidance of the new energetic mayor of the city of Edmonton, Mr. H. M. E. Evans, the city is resolutely tackling the problem of making its income and expenditure meet. The city is prosperous and general business is good. Important new legislation has just recently been obtained which the council is proceeding to put into effect. It gives the city important sources of revenue. The single tax system has been set aside for the time being at least. The new systems of taxation include the assessment of improvements as well as of land, business, rental tax and graduated income tax. Drastic changes have also been made in connection with the municipal street railway. The new rates of fares which went into effect on May 1st, already show an increased revenue. The new rates are: Cash fare 7 cents, or four tickets for 25 cents; tickets if bought off the cars (most of which have been converted to the one-man system), are five for 25 cents. These tickets can be bought in stores and public places. Five cents is charged for large bundles and five cents for baby carts, etc. Mayor Evans is confident of good and lasting results in the changes in revenue that have been made, and is most optimistic as to the future. The city has adopted the policy of economizing to the last cent, and they are to be commended for so doing.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first three weeks in May:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
May 7	$3,065,000	$3,033,000	— $ 32,000
May 14	3,123,000	3,109,000	— 14,000
May 21	3,074,000	2,847,000	— 227,000

Grand Trunk Railway.

May 7	$1,135,091	$1,434,727	+ $299,636
May 14	1,356,646	1,480,903	+ 124,257
May 21	1,425,554	1,576,508	+ 150,954

Canadian Northern Railway.

May 7	$ 734,500	$ 827,500	+ $ 93,000
May 14	882,000	857,300	— 24,700
May 21	860,400	866,300	+ 5,900

On May 25th a steamer arrived at Vancouver with 6,500 tons of raw sugar from Hawaii. This is the first shipment of a total of 25,000 tons which has been arranged.

NEW STEAMSHIP COMPANY

A company is being formed to operate a line of steamers from Montreal to Quebec, Cape Breton, Magdalen Islands and intermediate ports on the north and south shores of the St. Lawrence. Stock subscription books are open to raise $1,000,000 to acquire the necessary ships. Attempts are being made to secure a subsidy from the Dominion government, and Captain Bernier and J. De S. Bosse have gone to Ottawa in this connection.

MILLING PROFITS IN CANADA

The report of the Cost of Living Branch of the Department of Labor was issued on May 27th. It covers the years 1913 to 1917, and shows that the milling companies' profits have increased substantially, and that the limitation of profits to twenty-five cents per barrel has not been very effective in keeping down profits. Millers can handle flour with this margin and still make large profits, and the report affirms that on a margin of fifteen cents ample dividends and reserves can be realized.

Generally speaking, the increase in profits has been due to the increase in production and turnover, although there are cases of increases in profit per barrel of flour.

Another point brought out by the report is that the smaller companies, producing less than 100,000 barrels of flour a year, would find difficulty in surviving on a profit of twenty-five cents per barrel. Large companies, on the other hand, can make enormous profits on this basis.

In some cases the companies have been able to declare a dividend on the common stock for the first time. In other cases the regular dividends have been augmented; in the case of the Ogilvie Flour Mills Company, the regular dividend was 8 per cent. up to 1916, when it was raised to 12 per cent., and in 1917 to 25 per cent. Large sums have also been placed at the credit of profit and loss and surplus accounts, and in reserves for war taxes. Unprecedented amounts have also been set aside for depreciation.

While the Ogilvie company is much the largest, and produces about one-fourth of the total produced by the nine largest companies, there are several others of the first rank, producing over 500,000, and three producing over 1,000,000 barrels annually.

MERCHANTS BANK ANNUAL REPORT

The annual report of the Merchants Bank for the year ended April 30th, 1918, has been prepared for the general meeting of the shareholders on Wednesday, June 5th. The net profits for the year were $1,236,680.96, and this, together with $421,292.96 at the credit of profit and loss, gave a total available for distribution of $1,657,973.92. This has been disposed of as follows:—

Dividends (at 10 per cent. per annum)	$ 700,000.00
Government war tax on note circulation	70,000.00
Contribution to officers' pension fund	50,000.00
Transferred to contingent fund	400,000.00
Balance carried forward	437,973.92
	$1,657,973.92

While the profits were larger than for last year, the increase in the balance on hand is comparatively small on account of the sum of $400,000 being carried to a contingent account.

A very satisfactory increase in general business is shown. The following figures illustrate the growth:—

	1918.	1917
Notes in circulation	$12,327,168	$ 9,483,468
Deposits not bearing interest	34,886,747	27,101,587
Deposits bearing interest	75,946,985	65,000,484
Balances due to other banks in Canada	1,400,941	628,863
Balances due abroad	598,851	411,806

The total assets of the bank are now $140.937.544. an increase of almost $20,000,000 over last year. Holdings of government and municipal securities and current loans in Canada have been largely increased. and the deposit in the central gold reserve has been increased from $3,500,000 to $6,000,000.

DIVIDENDS AND NOTICES

UNION BANK OF CANADA

A. T. STEPHENSON,
City Commissioner.
Red Deer, Alta., May 28, 1918.

The Standard Reliance Mortgage Corporation and the Sterling Trusts Corporation are now housed in their new offices, 12 King Street East, Toronto.

CANADIAN NORTHERN ARBITRATION AWARD

Arbitrators Value Stock at More Than Limit Set by Government

The award of the Board of Arbitration sitting on the Canadian Northern Railway case was announced on Monday. The 600,000 shares of stock are valued at $10,800,000, and the award also stated that the assets of the road are worth $25,000,000 more than the amount of its obligations.

The Canadian Northern Railway had been pushed forward at an unprecedented rate up to the beginning of the war. It then found itself practically cut off from a money market, and was in a bad way for equipment and for the completion of connections. The Dominion government already held 400,000 of the 1,000,000 shares of common stock; Mackenzie and Mann owned 510,000, a controlling interest, and the remaining 90,000 shares were scattered among smaller holders. The company entered into an agreement for the taking over by the government of the 600,000 shares, at a price to be set by arbitration, a limit of $10,000,000 being set. The board consisted of Sir Wm. Meredith, C.J.O. (chairman), Chief Justice Harris and Mr. Wallace Nesbitt, K.C. The board sat in Osgoode Hall, Toronto, from March to May 15, on 50 days altogether. The evidence has totalled 1,500,000 words, 211 exhibits have been produced and the total cost will be $100,000.

Text of the Award.

The award reads as follows:—

"(1) That the value of the said six hundred thousand shares as of the date of the agreement was the sum of $10,800,000.

"(2) That the parties shall respectively pay and bear their own costs of the arbitration, except that the government of Canada shall pay the expenses of taking and transcribing the evidence, the remuneration of the secretary and messenger employed by us, and the incidental expenses incurred by the secretary.

"The question to be determined by the arbitrators was one of great difficulty and one which, of necessity, admitted of great diversity of opinion. We heard much testimony and had the benefit of assistance of experienced and able counsel on both sides, and carefully investigated every matter which seemed to throw any light upon the question to be determined.

Assets Exceeds Liabilities.

"As to whether or not there was a surplus of assets over liabilities was naturally a subject which engaged much time and consideration. It is, of course, not a conclusive test as to the value of the stock, but it is an element which cannot be ignored. Its importance was, perhaps, emphasized by the fact that a Royal Commission had reported the assets and liabilities of the company to be about equal. This report, which was made in a proceeding to which the company and its shareholders were not parties, was admittedly based on a misconception of some of the facts, and there were omissions of both assets and liabilities. It should also be pointed out that the work of the Royal Commission had reference to a date anterior to the first day of October, 1917, that there were changes in the interval.

Accept Depreciation Estimate.

"In arriving at the surplus of assets over liabilities, the report of Professor Swain as to the reproduction cost new of the physical property, based on pre-war prices, and also his estimate of the depreciation, have been adopted, and, after a careful examination, we found the surplus of assets over liabilities of the company on the 1st day of October, 1917, on a conservative basis, to be not less than $25,000,000, after deducting the full amount of depreciation found by Professor Swain, and making such reduction in the value of the land grants and other assets as deemed reasonable.

"It is to be pointed out that a valuation of the physical property of a railway company by the reproduction new method, less depreciation, is not to be regarded as an ascertainment of the actual value. It is only a means to that end, but as it was the best, and, in fact, the only estimate available, it has been adopted as a basis for the foregoing calculations.

"While the surplus of assets over liabilities is an element for consideration, as has been already pointed out, it is not conclusive as to the value of the stock of the company. Its prospective earning power is perhaps more important than any other element in ascertaining such value, and in arriving at a conclusion we have given careful consideration to the past history of the company, its earnings and expenditures, the present financial position of the company, the location of its lines and their construction, the other railways already existing in competition, the rate of interest on the funded and other debts of the company, the probable future growth of the population and business of the country, and all other factors which seemed to us to have any bearing upon the question.

"It is apparent that there was great room for difference of opinion in a matter involving so many elements of uncertainty and speculation, but after taking into consideration all the circumstances which appeared to us to be entitled to weight in determining so difficult a question, we came to the conclusion we have mentioned."

THE FEDERAL LAND BANKS

The first consolidated statement of the condition of the twelve Federal Land Banks of the United States as of April 30th, 1918, has been made public. The Farm Land Act requires that the board shall, from time to time, require examinations and reports of condition of all land banks established under the provisions of the act, and shall publish consolidated statements of the results. Because of the fact that the year's business has practically been completed, the board has supplemented the statement of condition with a statement of income account. The banks have made loans to farmers to the amount of $91,865,586. There is considerable accrued interest on these loans, and the banks also hold United States government bonds and certificates to the amount of $1,350,030. The total assets are over $104,000,000. The capital stock of the banks has been increased during the year from $9,000,000 to $13,594,895. The United States government owns about two-thirds and the balance is held by various farm land associations. The bulk of the funds required are secured by the issue of farm land bonds, of which $83,750,000 are now outstanding.

The operations for the year resulted in a deficit of $411,954, which is about 3 per cent. of the capital. It is officially stated that the excess of expenses and charges over earnings represented at one time about 7 per cent. of the capital stock, and has been rapidly reduced during the last four months as the volume of business on the banks' books increased. The figures represent practically twelve months' expenses and six months' receipts. The expenses include the cost of appraisal and part of the costs of determination o title on additional loans to the amount of about $83,000,000, which have been approved but not yet closed. These expenses, incurred on future business, represent about 60 per cent. of the apparent deficit to date. Most of the loans are at 5 per cent. and the balance at 5½ per cent. Two of the banks already show an actual surplus, and before the end of the present calendar year it is expected that a majority of them will be in the same position. One bank has doubled its capital stock of subscriptions by farm loan associations, and will from now on be repaying semi-annually, in accordance with the provisions of the act, the capital originally subscribed by the government and individuals. The total payments by borrowers overdue on April 30th amounted to less than $14,000, which is less than 2 per cent. of the total amount due, and more than half of this is only 30 days overdue, the amount 90 days overdue being less than half of 1 per cent.

The federal farm loan bonds are continually offered to the public by the Federal Farm Loan Board of the treasury department, Washington. The bonds are in denominations of $25, $50, $100, $500 or $1,000, in either coupon or registered form. They bear 5 per cent. interest, payable semi-annually, May and November, and are exempt from all taxation, federal, state, municipal and local. They are acceptable at par as security with all public securities, and are legal investments under the laws of the United States and a majority of the States. The price of the bonds is 101, accrued interest netting over 4¾ per cent. to the redeemable date and 5 per cent. thereafter. The bonds are secured, dollar for dollar, by the pledge of first mortgages on farm lands, cultivated by the owner, and worth at least twice the amount of the mortgage. In addition to this, the prompt payment of principal and interest is guaranteed by the capital of the issuing bank and the joint liability of the whole twelve Federal Land Banks for every bond issued by any one of their number.

A Newspaper Devoted to Municipal Bonds

THERE is published in New York City a daily and weekly newspaper which has for over twenty-five years been devoted to municipal bonds. Bankers, bond dealers, investors and public officials consider it an authority in its field. Municipalities consider it the logical medium in which to announce bond offerings.

THE BROWN BROTHERS LIMITED

Simcoe and Pearl Streets - TORONTO

A SQUARE DEAL IN LIFE ASSURANCE

"First in the Northwest."

Do YOU know anything about "loadings"???

When the average Life Assurance Actuary figures out your premium he first finds the "net" premium, then adds to it a percentage called a "loading" to provide for expenses.

This method has been condemned by world famous actuaries for over half a century.

The Northwestern is the only Canadian Life Company that uses a scientific method of providing for expenses, and this results in

LOWER PREMIUMS

Write for our circular entitled "Life Assurance Rates" exposing the unsound methods generally followed and justifying our claim to be

Canada's only scientific Life Company.

The Northwestern provides the highest reserves of any Canadian Company.

FOOD COMMODITIES IN CANADA

Large Stocks of Produce in Storage—Overseas Shipments of Meat Have Increased

The statements for May 1st, compiled by the Department of Labor, show that foods are being kept moving reasonably well. The stocks of butter are low and have decreased since April. Stocks of eggs are increasing, as it is right they should at this season of the year, when the new crop is coming in. The very low figure in egg holdings on April 1st indicates that the storages were entirely cleared of last year's stock. Cheese has also decreased markedly since last month.

The stocks of beef are larger than a year ago, but they are being moved rapidly. Stocks of pork are not so large as a year ago, judging by the records of the firms reporting this May and a year ago, but they have increased above last month. Mutton and lamb are in storage in less quantities than usual. Taking the meat situation as a whole, it is found that there are large stocks, large movement, and an opportunity for a still larger overseas shipment.

This export has been centralized in the hands of the Allied Provisions Export Commission, and thereby Canadian consumers as well as the Allies are being saved still higher prices which would result from the old system of competitive buying by a dozen different commissions bidding against each other. The commission stated that they had been taking available surplus of pork products, beef, cheese and butter, and that they shall undoubtedly require all that Canada can spare of these products.

Commodities in Storage.

The amount of food commodities in storage May 1st, 1918, were:—

	Pounds.
Butter	1,182,211
Cheese	3,141,771
Eggs (dozen)	3,766,997
Beef (fresh and pickled)	21,592,408
Pork (fresh and pickled)	27,235,400
Bacon, ham and smoked meats	13,279,961
Mutton and lamb	1,449,655
Fish, all varieties	15,534,328
Fowl, all varieties	1,640,150

The preceding figures cover only goods reported as held in storage. To estimate the quantity of any of such goods available from cold storage companies for consumption and export, ten per cent. may be added to represent goods in transit and certain comparatively insignificant quantities unreported.

Owned by Firms.

The following comparative statement shows goods owned by firms reporting May 1st, 1918, who also have reported May 1st, 1917:—

Commodity.	May 1st, 1917. Pounds.	May 1st, 1918. Pounds.
Butter	994,693	873,016
Cheese	1,199,585	1,952,573
Eggs (dozen)	1,633,842	2,934,594
Beef (fresh and pickled)	8,904,857	17,866,506
Pork (fresh and pickled)	27,679,144	25,548,857
Bacon, ham and smoked meats	23,001,405	12,984,219
Mutton and lamb	2,767,430	1,227,073
Fish, all varieties	9,235,692	9,992,208
Fowl, all varieties	3,021,004	1,042,407

Comparison of Holdings.

Comparison of holdings of April 1st, 1918, with May 1st, 1918, are as follows:—

Commodity.	April 1st, pounds.	May 1st, pounds.
Butter	2,804,201	1,182,211
Cheese	4,266,207	3,141,771
Eggs (dozen)	276,898	3,766,997
Beef	30,285,941	21,592,408
Pork	25,335,862	27,235,400
Bacon, ham and smoked meats	13,328,750	13,279,961
Mutton and lamb	2,933,231	1,449,655
Fish, all varieties	14,721,956	15,534,328
Fowl, all varieties	2,090,038	1,640,150

PERSONAL NOTES

MR. C. J. BRITTAIN, manager of the Canadian Fairbanks-Morse Company, Limited, Winnipeg, has been appointed to the directorate of that company.

MR. F. J. COOMBS was this week elected president of the Empire Club of Toronto. Mr. Coombs is a member of the firm of A. E. Ames and Company, and manager of the bond department.

MR. GEORGE HENRY, M.P.P. for East York, has been appointed minister of agriculture in the provincial government, relieving the prime minister, Sir William Hearst, of the duties of the agriculture portfolio.

MR. JOHN APPLETON, secretary-treasurer of the Dominion Mortgage and Investments Association, has returned from an absence of several weeks in the West, during which he attended the annual meetings of the four provincial mortgage associations.

MR. JAMES GRAHAM, F.I.A., manager of the Mutual Life and Citizens Assurance Company, Limited, of Melbourne, Australia, died recently. Mr. Graham was formerly actuary of the Australian Widows' Fund Society, with which the Mutual Life and Citizens Assurance Company amalgamated some years ago.

MR. F. J. GILLESPIE, provincial manager for British Columbia of the Excelsior Insurance Company, has been appointed commissioner for South Vancouver, by the Hon. John Hart, minister of finance. Mr. Gillespie will operate the city of South Vancouver, the management and financing of which has been taken over by the provincial government, with a view to once again placing the city in a solvent condition.

MR. EDWARD HAY, general manager of the Imperial Bank of Canada, has been appointed to the directorate of that bank. He has been with the institution since its inception, and in the financial community much of the credit for the substantial growth of the bank is accorded to the new director. Mr. Hay and Mr. Peleg Howland, who was the first junior in the bank, and is now president, are the only survivors of the original staff.

According to a recent statement of the Acting Premier of Australia, the debt of the Commonwealth is now £609,000,000 sterling, including £148,000,000 of Commonwealth war loans and £49,000,000 war loans from the Imperial government. This represents an annual interest of £25,000,000 sterling.

The Northern Trusts Co.
Executor, Administrator, Trustee
No moneys on deposit; No Bonds or Debentures issued

The clause in the Company's Charter enabling it to include in its activities the acceptance of moneys on deposit and the issue of Bonds and Debentures was, at the special request of the original Directorate, struck out.

Sole liability to the public represented by Guaranteed Mortgage Investments to an amount not exceeding the paid-up Capital of the Company, and secured in each instance by improved Farm and City Property to the value of more than double the amount of the mortgage investment.

PRODUCTION OF BREAD IN CANADA

March Statement Shows Slight Decrease in Cost—Statement of Principal Cities

The minister of labor reports the following statement, with tables, showing the cost of bread, as in the principal cities of the Dominion.

The consumption of flour for the month of March, covering the corresponding reports as in month of February, and allowing for the extra days in March, shows a decrease of 4,000 barrels of flour.

The average production cost stands for February, 6.85 cents, compared with 6.81 cents in March, or 1-25th of a cent less, which would indicate less ingredients used.

In the 23 groups of towns of manufacture, seven show increases in cost, eleven slight decreases, while five are stationary. On the whole, the changes are small, practically no change in Ottawa, a slight increase in Montreal, Toronto stationary. In western centres, Winnipeg, Port Arthur and Edmonton are practically the same as last month, while Calgary is slightly lower.

Statement of Cost by Cities.

The following statement shows the cost (in cents) of producing one pound of bread in the principal cities of Canada:—

Halifax, New Glasgow, Amherst and Sydney Mines, 6.422; St. John, N.B., 7.983; Montreal and Westmount, 7.441; Sherbrooke and St. Hyacinthe, 6.669; Ottawa, 6.369; Toronto, 6.557; Kingston, Belleville and Peterborough, 6.040; Hamilton, 6.705; Brantford, 6.460; St. Catharines and Niagara Falls, 6.653; London, 6.659; Guelph, Stratford and Kitchener, 7.126; St. Thomas, 6.299; Chatham, 6.655; Cobalt, 6.714; Port Arthur, 6.584; Winnipeg, 6.665; Moose Jaw, 7.414; Medicine Hat, 6.213; Edmonton, 6.788; Calgary, 6.357; Victoria, Vancouver and New Westminster, 7.241. The Dominion average for March is 6.809 cents per pound.

The total bread produced during March, 1918, amounted to 18,114,521 lbs., and 15,167,055 lbs. were sold. The total flour manufactured during that month amounted to 69,193 lbs.

Flour Purchased.

The following statement shows the average cost of flour per barrel in March, 1918, compared with February of the same year:—

Locality.	February.	March.
Halifax, New Glasgow, Amherst and Sydney Mines	$11.31	$11.20
St. John, N.B.	11.20	11.15
Montreal and Westmount	10.89	11.11
Sherbrooke and St. Hyacinthe	11.00	11.03
Ottawa	10.92	10.80
Toronto	10.89	10.95
Kingston, Belleville and Peterborough	11.08	11.10
Hamilton	10.83	10.95
Brantford	10.82	10.83
St. Catharines and Niagara Falls	11.03	10.95
London	10.71	10.95
Guelph, Stratford and Kitchener	10.90	10.91
St. Thomas	10.48	11.02
Chatham	10.93	11.02
Cobalt	11.40	11.45
Port Arthur	10.46	10.52
Winnipeg	10.41	10.50
Moose Jaw	10.27	10.45
Medicine Hat	10.06	10.01
Edmonton	10.08	10.09
Calgary	10.00	10.21
New Westminster, Victoria and Vancouver	10.41	10.52

The total flour purchased during March, 1918, amounted to 60,492 barrels.

Bonds for Sale

Tenders are invited for an issue of five hundred thousand dollars, City of New Westminster, British Columbia, five-year six per cent. Municipal Bonds, authorized by Special Act, and secured by various bond issues. Delivery at the Bank of Montreal, New Westminster. Sealed tenders will be received by the undersigned up to 2 p.m.,

10th June, 1918,

when same will be opened in the Mayor's office, City Hall. Highest or any tender not necessarily accepted.

Official permission for the issue of these securities, as required by Order-in-Council (3439) of December 22, 1917, has been duly obtained. Such permission, however, does not constitute an approval of the issue as regards its merits or security in any respect. It signifies merely that the sale of these securities is not considered to be incompatible with the requirements of Canada's War Finance. Further particulars on request.

R. S. GILCHRIST,
City Treasurer.

New Westminster, B.C.

CITY OF OTTAWA BOND ISSUE

The city of Ottawa sold on the 9th of May an issue of $473,694.26 of bonds to the Bank of Ottawa by private arrangement. The bonds bear 6 per cent. interest, payable semi-annually on the 1st of January and July, and mature 1919-1948. The price was 99 and interest, or approximately a 6⅛ basis. This issue was made for various purposes, as follows:—

		Years.
Local Improvement—		
Sidewalks	$ 21,222.69	10
Pavements	106,162.86	15
Sewers and street openings	18,808.71	20
Total	$146,194.26	
By-Law No. 4530—Soldiers' Home	$ 40,000.00	20
Central Canada Exhibition Association overdraft	18,000.00	20
Equipping workshop	15,000.00	20
Halifax Relief Fund	15,000.00	20
Isolation Hospital	20,000.00	20
Discount on debentures-general	29,000.00	20
Canadian Patriotic Fund	125,000.00	10
Ottawa South sewer extension	34,000.00	30
Discount on waterworks debentures	11,500.00	30
Detention Home	20,000.00	20
Total	$473,694.26	

NEXT CANADIAN LOAN IN FALL

The Dominion executive, which handled the war loan of last fall, is already preparing for the next issue, and the finance minister, Sir Thomas White, has been discussing it with them. No official announcement has as yet been made regarding the terms, and it is understood that they have not yet been determined. It is expected, however, that the loan will be floated in a manner similar to the Victory loan, and that it will be issued about November 1st. The rate of interest cannot, of course, be determined until the conditions at the time are known.

BRITISH COLUMBIA ISSUE NOT SOLD

The tenders for the $2,000,000 issue of British Columbia bonds were opened on Tuesday. The following bids were received:—

(1) Syndicate comprising Wood, Gundy and Company, Dominion Securities Corporation; bid 94.78, for $500,000, with an option on the balance at the same price.

(2) Syndicate comprising the Canada Bond Corporation, C. H. Burgess and Company; bid 94.68 for $2,000,000; all or none.

(3) Syndicate comprising A. Jarvis and Company, W. A. Mackenzie and Company, Brent, Noxon and Company, C. Meredith and Company, Hanson Brothers, R. C. Mathews and Company; bid 94.00 for $1,000,000, with an option on the balance at the same price, or 93.00 for $2,000,000, all or none.

(4) A. E. Ames and Company, for their own account; bid 93.80 for $1,000,000, with an option on the balance at the same price, or 93.255 for $2,000,000, all or none.

As Premier Oliver and Minister of Finance Hart did not consider any of these bids satisfactory, it was decided not to accept any of them, as the province does not need to dispose of the bonds at present. It is understood that a loan can be obtained from the Dominion government at about a 6½ per cent. basis.

ATLAS ASSURANCE COMPANY, LIMITED

The annual report of the Atlas Assurance Company for the year ended December 31st, 1917, appears on another page of this issue. In the life department, new policies, numbering 1,457, were issued, assuring £674,644, at annual premiums of £28,022, and single premiums of £766. The sum of £29,050 was reassured, leaving the net new sums assured for the year, £645,594. Deaths claims numbered 314, and amounted to £145,861; 84 of these claims were on lives over 70, and 30 of these were on lives over 80 years of age. The sum of £27,399 was carried to life investment reserve fund to cover depreciation of stock exchange securities during the year, and in the fire department the losses were less than 50 per cent. of premiums. The reserve for unexpired risks was increased by £56,548, and the balance, £163,463, was transferred to profit and loss account. The total at the credit of the fire reserve fund is now £1,439,385 The life assurance and annuity funds amount to £2,107,159. The company has almost £1,000,000 invested in British government securities, and has also large sums in India, colonial and foreign securities. Total assets are now £5,506,479. Considerable profit was also realized during the year from the employers' liability, accident and general account—namely, £16,345. The sinking fund and capital redemption account now stands at £91,216. The total at the credit of profit and loss account amounted to £316,198. This was appropriated for income tax and excess profits. duty, interest on debenture stock, war bonuses to staff, written off leaseholds, etc., transfer to shareholders, investment reserve fund, etc. The dividends for 1917 amounted to £79,750, and the balance carried forward is £69,701, or slightly more than last year.

The company's manager for Canada is Mr. Matthew C. Hinshaw, of Montreal, and the year's Canadian business has been excellent.

An increase of 50 cents a ton upon the present retail price of coal is forecasted by leading dealers here as a direct consequence of the decision of the United States Railroad administration to raise freight rates 25 per cent.

The Secret of a Wonderful Success

The rise and progress of The Mutual Life of Canada has been one of the romances in the history of Canadian Finance. Less than half-a-century ago a small group of men in an obscure Ontario town determined to establish a Life Insurance Company that would give the public the maximum of service at a minimum of cost. That being the aim it was resolved that the organization should be purely mutual. Five hundred prospective policyholders were gathered and formed the nucleus of the Company. From this small beginning in 1870 the Company has gone forward steadily with more regard to security and mutual serviceableness than big business. The result is that the Company to-day is enjoying a popularity that is phenomenal, writing during the past year more than $20,000,000 paid for assurances.

The Mutual Life Assurance Co. of Canada
Waterloo Ontario
Assets $32,165,000 Surplus $1,761,299 Assurance $123,311,314

Who Takes the Chances?

Who runs the risk when the breadwinner neglects to secure the protection of Life Insurance for those dependent upon him?

Not himself surely, but those for whom it is his duty to provide run the risk of his untimely death.

Whatever chances a man may rightly take for himself, there can be no excuse for subjecting others to a risk against which they cannot guard.

The Great-West Life Policies offer all that can be desired in Life Insurance; low rates, high profit returns, and the safeguard of careful, conservative management.

TOWN OF DALHOUSIE BONDS

Tenders will be received by the clerk and treasurer of Dalhousie, N.B., up till June 20th, 1918, for the purchase of $8,000 industrial bonds, dated June 30th, 1918, due June 30th, 1948, and bearing interest at the rate of 6 per cent., payable half-yearly, and for the purchase of $12,000 water and electric light bonds, dated June 30th, 1918, due June 30th, 1938, and bearing interest at the rate of 6 per cent., payable half-yearly.

IMPERIAL BANK OF CANADA

The annual report of the Imperial Bank of Canada appears in full on another page of this issue. Mention was made last week of the more important features of the report. In addition to paying the regular dividends at the rate of 12 per cent. per annum, the bank is able to carry $200,000 to contingent account to cover depreciation in bonds and debentures, and the balance at the credit of profit and loss is still somewhat ahead of the preceding year.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

(Continued from page 46.)

under wooden floor. Estimated damage on stock and electrical equipment, $95,000; on buildings, $50,000. A total insurance of $141,500 was carried. The following companies are interested: Royal Exchange Assurance, Palatine Insurance Company, Protector Underwriters, Ocean Accident and Guarantee Corporation, Limited, Firemen's Insurance Company, Employers Liability Assurance Corporation, Imperial Underwriters, British North-West Fire Insurance Company, British America Assurance Company, British Crown Assurance Corporation, Limited.

Vancouver, B.C.—Fire Chief Carlisle submits the following report for the month of April to *The Monetary Times:*

The estimated total damage resulting from fires for this period was $18,503, of which amount $17,538 was covered by insurance, leaving the property loss above insurance at $965. The total value of the property involved by fire for the month was $493,775.

The following shows the cause of fires for the month: Carelessness with cigarettes 3, children playing with matches 4, defective chimney 1, electrical origin 5, firewood left to dry in oven 1, flying sparks (chimneys, burners and smokestacks) 22, gaspipe breaking 1, gas tank bursting 1, hot rivet 1, overheated furnace 1, overheated gas stove 1, overheated stovepipe 1.

Vermilion, Alta.—April 11—Explosion of gas tank caused destruction of town hall, Royal Bank, post office, and many other buildings. Insurance was carried as follows: North America, $5,000; Canadian Fire, $5,300; Phœnix of London, $7,685; Home, $10,000; Caledonian, $2,000; Union, $4,100; Union of Paris, $4,000; Norwich Union, $3,500; Commercial Union, $7,800; New York Underwriters' Agency, $1,000; Queen, $3,000; North-West National, $4,500; Liverpool and London and Globe, $10,300; Connecticut, $7,125; Guardian, $6,000; Hartford, $1,800; Canada Accident, $3,000; Liverpool-Manitoba, $2,000; Pacific Coast, $6,000; London Assurance, $2,700; American Central, $1,600; Northern, $4,400; London and Lancashire, $2,500; Nova Scotia, $6,000; General of Perth, $6,000; St. Lawrence Underwriters, $2,000; Equitable, $2,000; Scottish Canadian, $2,000; Yorkshire, $4,000; Phœnix of Hartford, $2,400; British-America, $1,500; Canada National, $1,500; British Crown, $1,500; Sun, $1,500; Springfield, $2,000; Mercantile, $5,500; Occidental, $2,500; Royal Exchange, $8,000; Royal, $13,150; North British and Mercantile, $2,000; total, $169,160.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members Toronto Stock Exchange, 103 Bay Street Toronto:—

May 29th, 1918.

	Div. Rate	Price about	Yield about
Preferred:			
Canadian Locomotive	7	83	8.45
Canada Cement	7	91	7.69
Canada Steamships	7	76	9.21
Mackay Companies	4	65	6.15
Penmans	6	82	7.31
Steel of Canada	7	90	7.77
Maple Leaf Milling	7	92	7.60
Common:			
Bell Telephone	8	130	6.15
B. C. Fishing and Packing	5	47	10.57
Canada Cement	6	60	10.00
Canadian Locomotive	6	60	10.00
Canadian General Electric	8	103	7.76
Consumers' Gas	10	145	6.89
Consolidated Mining and Smelting	2½	25	10.00
Dominion Foundries & Steel	8	68	11.76
Maple Leaf Milling	10	97	10.37
Canadian Pacific Railway	10	147	6.80
Ottawa Traction	6	70	8.57
Penmans	6	75	8.00
Dominion Steel Corporation	5	59	8.47
Steel Co. of Canada	6	63	9.52
Mackay Companies	6	76	7.89
Toronto Railway	4	60	6.66
Twin City	4	44	9.09
Bonds:			
Canada Bread	6	92	6.52
Canada Cement	6	97	6.18
Canada Steamships	5	80	6.25
Canadian Locomotive	6	86	7.05
Penmans	5	67½	5.72
First War Loan, 1925	5	95	5.26
Second War Loan, 1931	5	94	5.31
Third War Loan, 1937	5	93	5.37
Victory Loan, 1937	5½	98⅞	5.58
....	....	....	....

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

BOOKKEEPER, ACCOUNTANT, BANKER, OFFICE MAN.—Become an expert in your chosen profession. The demand for high-grade trained men is keen. The trained man is not only able to respond and make good when opportunity presents itself, but has the power within him to create opportunity. Mail instruction in Higher Accounting, Chartered Accountancy (C.A. Degree of every province), Banking (Degree of Canadian Bankers' Association), Auditing, Business Law, Cost Accounting and Bookkeeping. Satisfaction assured—highest endorsements of successful students. We also teach—Commercial Art—Advertising—Show Card Writing—Salesmanship—Story Writing and Journalism—Civil Service and all Commercial Subjects. Write us for particulars (Department M.T.) Shaw Correspondence School, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

WANTED.—Accountant and Office Manager. Must be capable, efficient and have executive ability. State experience, give references and salary expected. Revelstoke Sawmill Company, Limited, Calgary, Alberta.

LOW RAILWAY RATES FOR FARM WORKERS

The Quebec provincial government has obtained, through the Canadian Passenger Association, special reduced rates for all townspeople going out to work on the country farms. Any workers going to a point from 33 to 100 miles distant will get a first-class ticket for one dollar. All workers going to a point from 100 to 300 miles distant will get a first-class ticket at the rate of one cent per mile.

Certificates will be issued to said workers by the Provincial Department of Farm Hands and at branches of this department established throughout the province.

NEW PRESIDENT OF MANUFACTURERS' ASSOCIATION

The annual convention of the Canadian Manufacturers' Association is to be held in Toronto on June 12th and 13th. The retiring president is Mr. S. R. Parsons, of the British American Oil Company, of Toronto. It is said that Mr. W. J. Bulman, of Bulman Brothers, Limited, Winnipeg, will be the new president. Mr. F. P. Howard of the Phoenix Bridge and Iron Company, Toronto, is mentioned as the first vice-president.

MONEY MARKETS

Messrs. Glazebrook & Cronyn, exchange and bond brokers, report the following exchange rates to *The Monetary Times:*—

	Buyers.	Sellers.	Counter.
N.Y. funds	1¼	1 9-32	.....
Mont. funds	Par	Par	⅛ to ¼
Sterling—			
Demand	4.8125	4.8150	4.83½
Cable trans.	4.8230	4.8250	4.84½

Rate in New York for sterling demand, 4.75½.
Bank of England rate, 5 per cent.

Shipments of gold totalling $4,000,000 have been made from Canada to New York during the past two weeks. These will at least to some extent remedy the acute exchange relations between the two countries.

Financial Future of the Empire

British Finances Are Sound—Germany is Near Bankrupt, But Struggle Can Be Carried on Long After This Stage is Reached—London Will Retain Position as Financial Centre—Canada to Remain a Borrowing Country.

AT the outbreak of war the United Kingdom's external investments amounted to not less than $26,000,000,000. Since that time the United States has liquidated its obligations to Great Britain; but, as Mr. Bonar Law recently explained in his budget speech, the credit balance has been increased to a like extent elsewhere—mainly by advance to the Allies, Belgium, Serbia, Italy and Russia. What is the significance of this financial showing in terms of peace-time trade?

Astonishing as it appears, the foreign trade of Great Britain is as great as before the war. It has altered fundamentally in character, to be sure; but in volume and value is still as extensive as in days of peace. Only the scarcity of shipping has prevented the nation from drawing imports from all parts of the world. Yet it must not be forgotten that the great trade routes have been kept open, commercial connections maintained, and favorable credit balances preserved unimpaired. The reverse is true in each particular, for the United Kingdom's chief commercial rival, Germany.

From the financial standpoint Germany is in a bad way. Mr. Bonar Law outlined the credit position in that country and asserted that, if Great Britain were facing an identical situation, bankruptcy admittedly would not be far distant. And it is no sufficient answer to say that Germany is battling vigorously for a near-bankrupt. The American Confederacy continued the struggle long after its currency and credit had been shot to pieces. Economic and material exhaustion ended that struggle. Lee won the battles, but Grant won the war.

Now, while it is admitted that Germany's financial condition, black as it is and desperate as it is, will not in itself bring that tyrannical oligarchy to its knees, yet it will render the waging of war increasingly difficult. There will be no indemnities, no loot to salvage from the wreck. Already the German national debt has passed the $31,000,000,000 mark; credit has been pyramided to the toppling point; the paper money of the country has gone to a heavy discount. The Reichsbank, which holds the gold reserves of the nation, shows a favorable balance of the yellow metal amounting to some $675,000,000; but how much of it belongs to Austria is a matter of speculation. Even before the United States entered the war American financiers had their suspicions of the validity of the Reichsbank's claims to this big gold balance. Since then German gold has flowed to all the neutral nations of Europe—they will take nothing less for food and other essential products. Even that part of the indemnity extorted from France in 1871, laid up in the treasury at Spandau as a war reserve, has been dissipated. This has been proved beyond peradventure or doubt, since it consisted of newly-minted British sovereigns of that period; and these have appeared everywhere throughout the neutral states of Europe. Germany simply can not maintain its credit on a gold basis at the close of the war, having long since abandoned domestic gold payments.

Reference has been made above to the undiminished amount and security of British foreign investments. How does Germany fare in this particular? At the outbreak of hostilities its foreign investments were second only to those of the United Kingdom, amounting to $8,500,000,000. But note their location: a small part in Canada and the United States; heavy holdings in Sao Paulo and Chili and Kiao Chou; very large investments in Russia, the Balkan States, Turkey and Asia Minor. Needless to say, Germany has drawn neither interest nor dividend from Canada, Russia, Turkey or Asia Minor since August, 1914; Kiao Chou is in the hands of Japan and will remain there or revert to China; the African colonies have vanished; the grandiose schemes in Palestine and Mesopotamia have gone glimmering. The United States has sequestrated German property; Brazil has followed suit; Turkey is bankrupt; Austria-Hungary cannot pay for years to come; Russia has repudiated her obligations. True, Germany has placed its money in Russian industrial and commercial enterprises, and not in government bonds; but these investments are as good as lost unless Russian credit be rehabilitated. On the other hand, the Russian nation will some day make good its $8,000,000,000 of obligations to France, the United Kingdom and the United States. The Bolsheviki Soviet has, of course, repudiated all foreign debts; but the time inevitably will come when Russia must seek an outlet for its products, and secure capital for industrial expansion and the development of its wonderfully rich natural resources. When that hour strikes, peace and good government will make the nation's credit good.

German financiers were unable to restrain their glee when the Bolsheviki announced the repudiation of all foreign obligations. It was asserted that France would take years to make up its loss of $4,000,000,000 in Russia; and that this loss, together with the war debt, would cripple French finance. And so it appeared on the surface. Yet sober second thought has made it clear to even the extremists in Russia that sound credit is the corner-stone of international commerce; that without credit standing the products of Russia will be unable to find a market; and that without outside financial aid Russia's industrial and commercial future is hopeless. Already the Bolsheviki leaders have informed the American ambassador, Mr. Francis, that Russia's support can be won most quickly and effectively by a loan from the Entente Allies. The lesson has been quickly learned. Loans are not granted to the absconder and the morally bankrupt. The sane, conservative elements in Russia are bound to come to the forefront, be it soon or late; and that great country will thereupon assume its rightful place among the family of nations.

Both domestic and foreign trade were carried on largely by the use of credit before the war. Canada, in proportion to population, was one of the heaviest borrowers in the world. We had constructed our railroads, our canals, our cities and public utilities largely on borrowed capital. It had become the fashion, just prior to the outbreak of war, to assert that the borrowing process must cease; that the nation must now turn to the production of wealth. The criticism was absurd.

There is nothing wrong, whether in theory or in practice, in borrowing. Our biggest and most progressive corporations have been, and must continue to be, borrowers. The banks operate on borrowed capital. Every alert business man must borrow. The individual who has made the biggest commercial or financial success in life, at some stage or other in his career, has been a heavy borrower. It is impossible to conceive of the functioning of modern business without the use of credit. The real point that needs careful consideration is, of course, the use to which such funds are put.

Canada to Continue a Borrowing Nation.

Canada, then, and every other country in the like stage of development must be a borrower for years to come. Our resources have hardly been scratched. A veritable empire is still in the making in the West. Just consider this one fact: the province of Saskatchewan has scarcely 15 per cent. of its arable lands under cultivation. The Hon. James Calder announced while still minister of railways of the province, that there was imperative need for the quick construction of 5,000 miles of branch railroads, to open up and connect virgin territory with the main trunk lines. The stock industry, farming, mining and lumbering are still in the pioneer stage in the prairie provinces. Their future is assured: but it is a far bigger future than most of us have ever envisaged. The alleged over-expansion of public building of all kinds in the West will be found to be, in effect, under-expansion when the great tide of European immigration shall have set in once more toward our shores.

Canada is Not Over-equipped.

Certainly, all our past and future borrowing must be for a purpose. The vast economic equipment that has been constructed in this country during the past decade must be put to productive use. It is being put to such use. Instead of the country being over-equipped, the factories, farms, mines and railways are scarcely able to meet the demands placed upon them. It is of after-the-war conditions, however, that we are mainly concerned. To keep the nation's credit good—and that is of imperative importance—not a single bit of machinery or equipment must be allowed to remain idle. The object of the vast expenditures, of the past, on economic equipment was the production of wealth. Unless we can produce efficiently and in sufficient volume what the world needs the fabric of Canadian credit will collapse. But there is no danger of that. Canadian business men and Canadian labor can, on their war record, face the future with confidence.

Let it never be forgotten, however, that this country must be a borrower for years to come. And until we are wealthy enough to supply our requirements the greater part of the necessary capital must come from abroad. Hitherto Canada has depended upon the United Kingdom and the United States for loan funds. Both these markets have been largely closed to us during the course of the war. Thrown upon its own resources, the nation has shown astonishing financial strength—astonishing to itself, its friends, and enemies alike. The government, from first to last, has asked the people for $450,000,000 to finance the war. They responded with the offer of $982,000,000. At the close of hostilities, however, we must seek funds in outside markets, both on government and private account.

London Will Retain Its Position.

Many have predicted that New York will displace London as the financial centre of the world. We do not believe it; and there is little or no evidence to support it. For the United States is also in the pioneer stage—the stage of swift commercial and industrial expansion and of economic development. Its population is increasing at the rate of more than 1,000,000 per annum; and it will be a long time before it reaches the point of saturation. That means, every ten years, an addition to the Republic's population greater than the entire population of Canada. The United States will be put to it to finance its own domestic requirements. And—without going at length into the question at the present time—it must be remembered that the customs and habits of the commercial world cannot be altered over-night. What London has hammered out in a century of hard work, New York cannot achieve in a day by the accident of war.

But will London have the money to finance the empire, and the pioneer nations of the world? Will English credit survive the strain of prolonged war? Sir George Paish, the distinguished editor of the "Statist," has recently asserted that British credit is stronger than ever; that it will not only carry every war-time burden that may be imposed upon it, but that it will emerge from the struggle strong and triumphant. Where does the key to this enigma lie? In the tremendous development of banking and investment in the United Kingdom before the war; in the fact that war expenditures have been made in large part upon permanent industrial equipment; in the preservation of British foreign trade; in the maintenance of the gold standard. British credit is sound to the very core.

In conclusion it may be said, then, that there is only one type of loan that Canada cannot rely upon for the future—the kind of loan that the speculator and the gambler demand. For normal credit purposes, credit for the actual production of wealth in manufacturing, mining and agriculture, there will be available in London all the capital required. There is, therefore, no need or room for the pessimist in Canada. There is, moreover, no need for any crisis at the close of the war, whether financial or industrial. Should stagnation come upon the nation's economic life it will be due to wilful carelessness and neglect.

As only a part of the temporary Victory Loan bonds had been exchanged for definitive bonds on the first of June, the government issued an announcement authorizing banks to pay the six months' interest on the temporary certificates.

TRANSFERS OF STOCK

Endorsement and Delivery Held by Oklahoma Court to be Legal Transfer

BY M. L. HAYWARD, B.C.L.

"This certificate is transferable only on the books of the corporation by the holder hereof in person, or by attorney, upon surrender of this certificate properly endorsed."

The foregoing paragraph, or one to the same general effect is printed on every stock certificate, and transfers of stock certificates and the rights of the various parties concerned are questions of considerable importance. In this connection, a case recently decided by the Oklahoma Supreme Court, is one which lays down some important principles, and will repay a careful perusal, as it would, no doubt, be followed by the Canadian Courts under the same circumstances.

In the case referred to—Litchfield vs. Henson Oil Company—the facts were as follows:—

One, W. L. Norton, was the holder of a certificate for 200 shares of the Henson Oil Company, and by an assignment in due form he transferred the stock to the Exchange Land Company. When the Exchange Land Company forwarded the certificate to the Henson Oil Company, to have it transferred upon the books of the company, the secretary returned the certificate to the Exchange Land Company, refused to register the transfer, and, by Norton's request, the following entries were made upon the transfer book of the Henson Oil Company:—

Disclaims Having Assigned Stock.

"This certificate, No. 6, has never been pledged by me (referring to Norton), but is out of my possession, and I hereby apply for its reissuance, and direct that it be reissued to L. A. Rowland."

Acting upon this entry the Henson Oil Company reissued Certificate No. 6 to L. A. Rowland, as directed by Norton. A few months later the Exchange Land Company, by a proper resolution, sold the stock transferred to it by Norton, as above stated, to one R. S. Litchfield, and Litchfield brought suit against the Henson Oil Company in order to compel them to recognize him as the owner of the 200 shares of stock, and to account to him as a stockholder. The Henson Oil Company claimed the stock by virtue of its reissuance to Rowland, as above stated, as Rowland was holding it as collateral security for a debt which Norton owed to the Henson Oil Company. Litchfield claimed the stock by the above purchase and transfer from the Exchange Land Company.

The laws of the State of Oklahoma, at the time, provided that:—

"Whenever the capital stock of any corporation is divided into shares, and certificates therefor are issued, such shares of stock are personal property, and may be transferred by indorsement by the signature of the proprietor, or his attorney or legal representative, and delivery of the certificate; but such transfer is not valid except between the parties thereto, until the same is so entered upon the books of the corporation as to show the names of the parties by and to whom transferred, the number or designation of the shares, and the date of the transfer."

The stock certificate in controversy also provided that it was "transferable only on the books of the corporation by the holder in person, or by attorney, upon surrender of this certificate, properly indorsed."

Reissued Certificate Held Void.

The Supreme Court of Oklahoma held that, as the requirements of the certificate itself had not been fulfilled, the reissued certificate to Rowland was void as against the rights of Litchfield, the holder of the original certificate.

"Shares of stock in a corporation organized under the laws of Oklahoma," said the Court, "are personal property, and may be transferred by indorsement and delivery of the certificate; and, where such shares of stock when issued provide that they are transferable on the books of the corporation only on surrender of the certificate, such provision is binding upon the corporation, and it cannot reissue such stock without the surrender of the original certificate to a person in whose name they stand on the books of the company, and thereby escape liability to a person who holds such stock by assignment and delivery of the same. Such reissued stock is fraudulent and void as against the rights of the bona fide holder of the original.

"Applying the rule laid down in this case to the case at bar, it would seem that the transfer of the stock 'by indorsement by the signature of the proprietor' (Norton) to the Exchange Land and Oil Company vested the title in the stock assigned in that company; and, of course, the subsequent assignment thereof to the plaintiff (Litchfield) had the effect of vesting title thereto in him, as in the case of ordinary personal property. It is well known that stock certificates of all kinds have been construed in such a way that they have become the basis of commercial transactions in all the large cities in the country, and are sold in open market the same as other securities; and, whilst they are neither in the form or character of commercial paper, they approximate it as nearly as practicable. The reissuance of the stock to Rowland, to be held as collateral security for the Henson Oil Company, was not an ordinary business transaction, nor can we find any authorization therefor in the law. On the contrary, as an Oklahoma case holds, 'such reissuance of the stock is fraudulent and void, as against the right of the bona fide holder of the original.'"

CALEDONIAN INSURANCE COMPANY

The Caledonian Insurance Company, whose 113th annual report for 1917 appears in this issue, is the oldest Scottish insurance company, and one of the oldest insurance companies in the world. The report for 1917 indicates the success which has accompanied the sound and reliable policy which it pursues.

The net premiums for 1917 were $2,735,750, a considerable increase over the amount for the preceding year. Losses were slightly higher, but other expenses lower. The surplus is $277,365 as compared with $243,865 for 1916, and there is now $717,480 at the credit of the profit and loss account. The amount in the fire insurance fund is $1,930,155. The life and annuity fund is $17,384,695, or less than last year, and the total funds are $21,100,575.

The company has been writing fire insurance business in Canada since 1883, and for the past seven years its Canadian business has been under the management of Mr. John G. Borthwick, of Montreal. The net premiums for the year amount to $438,103, a considerable increase over the previous year. The loss ratio is 55.87 as compared with 66.41 in 1916, a very satisfactory decline. The company enjoys an excellent reputation in Canada.

CANADA'S RANK AS A FARM PRODUCER

In a recent publication, issued by the Canada Food Board, an interesting statement was given regarding Canada's standing as a farm producer.

Referring to the production of pork, it was stated that, in 1916, Canada's net exports amounted to 130,304,947 pounds, compared with Britain's imports of 1,261,082,032 pounds. The average of Canada's beef exports for the last three years was 20,680,000 pounds, compared with the British imports of 1,077,154,000 pounds.

Twelve years ago Canada exported 33,880,074 pounds of butter, compared with Britain's normal imports of 452,795,264 pounds. In 1916, Canada's net exports of butter dropped to 6,993,100 pounds, compared with British imports of 209,148,784 pounds. Sixteen years ago Canada's net exports of eggs amounted to 10,862,536 dozen. In 1916 the net exports dropped to 2,128,500 dozen.

The following table shows the number of hogs, cattle and sheep produced to the hundred acres by various nations:—

	Hogs.	Cattle.	Sheep.
Great Britain	5	16	52
Canada	3	6	2
Australia	..	8	58
Ireland	7	..	..
United States	8	8	6
France	6	12	13
Italy	4	10	21
Holland	19	29	12
Denmark	22	25	3
Germany	14	16	4
Argentina	..	..	15

AGRICULTURE IN PRINCE EDWARD ISLAND

Production for 1917 Less Than for 1916, But Greater Than for Preceding Years

The annual report of the Department of Agriculture of Prince Edward Island reviews the results of 1917 as follows:—

"The past year has been a successful one for the mixed farming pursuits of the Prince Edward Island farmer. True it is, that problems of new and serious importance have been felt, but a timely anticipation has done much to guide the welfare of the usual undertakings safely past the danger points. The labor problem, the appeals, and the demands of the markets, and the urgent patriotic duty to increase the production of the herds and fields, have in turn and in combination, been admirably dealt with by all concerned. In all parts of the province, there is evidence of sincere and well organized effort to arouse a full consciousness of the dependence upon our own resources, as a part of Canada, for the continuance of our share in prosecuting the war.

"The provincial production for 1917 will compare favorably on an average basis with a number of preceding years and in total valuation will exceed all others. Compared with 1916 crop production was approximately ten per cent. less, while the return from the herds and flocks was at least ten per cent. greater.

"The season just past has been a striking example of the rapidity of growth known to be a prominent factor of 'The Island's' agriculture, and due in no small measure to the responsiveness of the soil. The spring season opened with more cold, wet weather than is usually expected and proved to be a strain on the past winter's supply of fodder. Seeding was late throughout the greater part of the province, but it was followed so closely by warmth and growth, that the result can only be expressed as phenomenal.

"The pastures, although late, were full, but much of the hay was termed 'light' or 'lacking body.' On the higher land where growth commenced earlier, the hay crop was reported as average or over average. The rapid, short season, especially when it ended in dry, warm weather, left a part of the grain crop, with a short period of ripening, which has caused a lack of proper filling. This will apply more especially to the oat crop, and will bring home a demand for seed that will leave a smaller proportion to fill the export demand that has grown to be an established trade during late years.

"The wheat crop which has always held a permanent place in the rotations of the province, principally for home consumption has been increased and is proving of valuable assistance in reducing the demand on the nation's supply. The past season's crop was affected in some quarters by the ravages of the joint worm, associated with blight. This has reduced the yield per acre, but through the increased acreage, the full yield has been well maintained.

"Root crops in general gave an average yield, though reduced in acreage on account of labor shortage. The harvesting season was more acceptable than that of 1916, and will result in a better keeping of the crop. Potatoes were increased in acreage from 10 to 20 per cent., depending on the section, and have given a usual heavy yield. A large part of the crop has been marketed and a surplus remains for further shipments with sufficient for home consumption and seeding. Spraying for late and early blights is becoming a general practice and is proving of value beyond anticipation, especially as it not only improves the yield, but greatly improves the keeping quality, and allows the general use of varieties that were formerly prohibitive through rot. The hope is that a full appreciation of such work will develop the markets that the province merits and can supply.

"The year's production of live stock has furnished a report that is an improvement over past records. An increase in quantity is in evidence and on account of high market prices the industry promises to assume a standard of quality that will prove more of a balance than we have often been led to report.

"With quality and quantity as recognized and related factors of importance, especially for the markets of to-day, the province is in a position to advance, and advance it must, or lose an opportunity. Regret can be expressed that our production is not greater, and the factor of over-production is so remote that a greater effort will most surely bring greater returns. Gratification comes with knowing that many of the principal classes of farm stock are being gradually increased as evidenced by the sales of the past season and the retaining of breeding stock for future use.

"The dairy industry, a provincial pillar, is showing an increase of small, but reliable proportions. Instruction and demonstration work is now being backed by sales, according to quality and the affect is influential toward a more reliable progress. A proper regard for the factors that influence improvement in the dairy cow is being shown. During the past season, a ready market was open for the producer of medium to low standard. Through this procedure we can hope for the raising of the average production.

"Sheep raising has marked a greater increase during the past year than for some time past. The co-operative wool sale at unthought of prices, with the high ruling of the market for lambs and breeding sheep has revived a kindly regard for the 'golden hoof' that will remain. Swine are also being kept in greater numbers by virtue of bacon being demanded for the soldiers, which has directed promoting influences toward that class of stock. Poultry raising is gaining in rapid proportions, largely due to the co-operative influences exerted by that division of the Live Stock Branch, operating in the province. The trade in horses has been constant, but is not receiving as much attention as formerly. Buyers are more discriminating, but are willing to recognize the 'good' horse and pay a remunerative price.

"The campaigns for increased production, economy of consumption and kindred subjects, in which we have participated during the past, have engendered a regard for our agricultural work that will mean much toward its future development. The problem of a falling production, especially when associated with a need, has brought a keen regard for the underlying elements of "stock-taking." Markets are now being studied and forecasted with an accuracy that was not previously taken as a possibility. Supply and demand will no longer be accepted as elementary factors governing present markets, but will be taken as forces of vital importance in their bearing on future production. A standard of quality will bear its relation to the country or person of its origin and will be a trade mark for its acceptance or refusal. In short, haphazarded method and unorganized effort has had its day, and the future has much in store for the advocates of concerted action.

"The underdraining of farm lands has marked steady progress. A number of farms have been surveyed and a considerable area of otherwise partially productive land has been underlaid with tile through the operation of the traction ditcher purchased by the Department of Agriculture. This work is filling a long-felt need and is only in the initial stages of its development.

"The Rural Science Department of the Prince of Wales College, through its teaching, is developing a definite and lasting regard for the underlying principles of agriculture, through the teachers in training, and through the home projects and school fairs held throughout the province.

"The Women's Institute Branch has also established an important phase of training, for a useful education, in giving the girls of the city schools the benefit of a household science course. Such work is also being carried on through a number of local women's institutes and household science short courses."

NEWFOUNDLAND BOND ISSUE

The syndicate which last week purchased $3,000,000 of Newfoundland 6½ per cent. bonds has secured another $1,000,000 of them. The $3,000,000 were entirely disposed of almost immediately, and a considerable part of the additional $1,000,000 has, it is understood, already been sold. The selling price is the same, viz., par and accrued interest.

The Maritime Linen Mills, Limited, has been incorporated with a capital of $24,000 to manufacture worsted and linen goods. The new company will establish its plant at Moncton, N.B., taking over the machinery and raw material of the Eastern Linen Mills, formerly of Dorchester, N.B.

The crop outlook in New Brunswick, so far as weather and soil conditions are concerned, was never better than it is this year. The acreage under cultivation will be somewhat less than last year. It is expected that in both potatoes and grains the returns will exceed those of last year.

STOPPING THE NATIONAL WASTAGE

During the past fortnight, attention has again been called to the necessity for still further economies. Sir George Foster in speaking of the cost of the war to Canada, said we had no idea of the burden that was resting on the country and would be for years to come. "The gospel of thrift," he said, "must sift into the Canadian people; it is making progress but the goal is not yet reached." There seems, in fact, to be a general agreement upon this point. It is when the question of ways and means is discussed that differences of opinion arise. During the past two weeks, however, two or three events have impressed upon us the necessity and advisability of further increases in taxation. There is no lack of evidence of ability to bear a much heavier burden than is at present imposed. Taxation in Canada is much lighter than in Great Britain, but even there it was reported the other day that musical instruments, which if not luxuries, are, at least, not articles of necessity, are in greater demand than ever before.

In our own case in Canada, while imports have been heavily taxed, the income tax, even as revised this year, merely touches the surface, and the individual who restricts his expenditures to necessities or near-necessities has a large margin still. In fact, were this not the case, there would be no necessity whatever for such government regulations as those regarding the consumption of food and other restrictions of expenditure.

President Wilson, in addressing a joint session of Congress on the 27th of May, emphasized the same point. "Only fair, equitably distributed taxation," he said, "of the widest incidence and drawing chiefly from the sources which would be likely to demoralize credit by their very abundance, can prevent inflation and keep our industrial system free from speculation and waste. We shall naturally turn, therefore, I suppose, to war profits and incomes and luxuries for the additional taxes."

There could be no more direct acknowledgment of the fact that economy is more satisfactorily realized by taxation than by any other means, and by cutting off the income of the individual, unnecessary expenditure is prevented at its very source. This is the case with the income tax, and once the machinery for collection is created in Canada, an increase in the tax will involve little or no increase in the cost of collection. Taxation of the incomes of corporations is the next great source to which the President referred. In this case, income is obtained immediately after its acquisition and before it is distributed among individuals. The war profits tax or excess profits tax is merely a special case of the business profits tax, which is considered a fit subject for a special high rate of taxation.

In the report of the Cost of Living Department on millers' profits, the fact that millers' profits have increased enormously since the commencement of the war appears to be clearly established, but the method of dealing with these excess profits that is recommended by the report is not that of legislation of a regulative character, but as the report states: "It is clear the only way to reach the profits of the milling companies is to increase the tax on the net profits on total investment for the year." The same point is brought out in the speech of President Wilson mentioned above. "Profiteering that cannot be got at by restrictions of conscience can be got at by taxation."

The simplest and obviously the most effective method of restricting private expenditure, is taxation, which taps springs of extravagance at their very source. The best judge of individual necessities is always the individual himself, and a more satisfactory result can be secured by permitting the individual to decide upon what he shall expend his income, than by prescribing it by government regulations.

THE NEW DEBENTURE STOCK

The new debenture stock of the Dominion of Canada, issue of which was announced at Ottawa by Sir Thomas White on May 31st, will furnish a satisfactory temporary investment for parties having funds in hand, pending the appearance of a new domestic war loan. The average investor is constitutionally averse to having his funds idle; and in cases where individuals or corporations come into possession of blocks of investment capital during the summer months, the chances are that unless some special investment like the debenture stock referred to were available, much of the money would become permanently fixed in securities other than the national war bonds. With the interest rate at 5½ per cent., the debenture stock conforms reasonably to the prevailing market; and, as it is likely that the next war loan will bear a slightly higher rate, the debenture stock bought meantime will be converted into the war bonds. In case of this issue small capitalists may participate—for the stock is in denominations of $50 and multiples thereof. It may be had in terms of one, two or three years from June 1st, 1918. By means of the stock issue and the war savings certificates, it is assured that the government will receive for war purposes a larger proportion of the savings and other accumulations of the people during the next three or four months.

As regards the war loan, it is understood that the arrangements therefor are now being made. Although the question of amount has not yet been definitely settled, the expectation in financial circles is that the issue will be for $300,000,000. With the banks and other financial institutions in sound condition, and good crop prospects in Western Canada, it may be assumed that the country will again respond whole-heartedly to the government's appeal. War loans already issued in the domestic market have an aggregate of $750,000,000. This represents approximately $95 per capita, or, say, $475 per family. If the new loan in the fall is for $300,000,000, that flotation will bring the total of domestic loans to $1,050,000,000. Even when allowance is made for the fact that Americans took perhaps $75,000,000 or more of the first four domestic loans, it will constitute a wonderful performance for Canada, with less than 8,000,000 population, to have raised over a billion dollars in a little more than three years for war purposes. The fact that we hold so large a proportion of our national debt will count importantly in our favor when the post-bellum financial settlements are being worked out. A billion dollars in domestic war loans will represent roughly $125 per capita; and when that is accomplished we shall still be slightly ahead of the United States in the matter of amount of war loans raised at home relatively to population.

The financial experts are aware that the energetic labors of all the participating organizations will be required to make the prospective loan the success that it should be. Although the figure now mentioned as the probable amount of the loan, is considerably less than the Victory Loan, it is to be remembered that war taxation since effective, will impair the subscription capacity of some of the parties who took large amounts of the preceding war issues. The income tax payable next month will absorb some funds that formerly were available for war bonds; and the increase of the income tax rate provided for in the recent budget, will make further inroads upon the investment funds of the wealthy and of the corporations. Thus Canada is obliged to look more and more to the small savers and parties of moderate means. Wherever possible or practicable, these parties should arrange now to save or provide in such manner as to enable them to take up more of the new loan than they took of the Victory Loan.

PIONEERS IN BANKING ON THE PACIFIC

During the past twenty-five years, the province of British Columbia has made enormous industrial progress, and its banking business has grown accordingly. The year 1871 saw British Columbia united with Canada politically, but it was not until 1885 that railroad connections were completed. From this year, the progress of commercial and financial unification was rapid.

Two of the earliest bankers to be sent from the east to British Columbia are also two of the veteran bankers of the Dominion. Mr. Wm. Godfrey, manager of the Bank of British North America in Vancouver, has been in the province since 1890, and Mr. H. H. Morris, superintendent of Pacific Coast branches of the Canadian Bank of Commerce, has been there since 1898. Both of these bankers joined their respective banks in 1875. Mr. Godfrey entered the service of the Bank of British North America in Kingston as a junior, became accountant in Halifax in 1883, in St. John in 1885, in Montreal in 1889, and manager at Vancouver in 1890. Mr. Morris joined the Bank of Commerce at Toronto, and became accountant at Hamilton in 1880. In 1886 he was appointed manager at Barrie, and in 1898 manager at Vancouver. The latter year marked the extension of the bank's business to the Pacific Coast. When the Bank of British Columbia was amalgamated with the Bank of Commerce in 1901, Mr. Morris became inspector, and in 1907 received his present appointment as superintendent of the Pacific Coast branches of the Bank of Commerce.

When the western representative of *The Monetary Times* was in Vancouver a few weeks ago, Mr. Godfrey called his attention to an editorial which appeared in *The Monetary Times* of November 25th, 1898. Under the heading "Animated Banking Proceedings," this editorial called attention to the "frantic rush made by different banks to be first in the field in the far west of Canada." One branch was started in a Rossland barber shop and another in a tent and later in a log hut at Dawson City. At Greenwood, B.C., a banking business was commenced under a cotton sign, and gold or checks were received on a billiard table. Banking business was even transacted at the dining tables of a restaurant. The experience of the past twenty-five years, however, has unquestionably justified the aggressive efforts put forth by the Canadian banks and amply repaid the initial expenditures. Mr. Godfrey and Mr. Morris have both played an active part in developing the province and we hope to see them complete a half century of service in the banking sphere.

Mr. J. D. McGregor, director of labor, Canada Food Board, says that seeding was never so well advanced in the history of the west as it is this year. It is up to the men in non-essential industries now to plan to help with the harvest.

"Let me draw the attention of the farmers of Canada to the grave need of planting every acre in wheat that is in shape to grow it. There should not be an idle man in Canada to-day who is physically fit to work"—Hon. T. A. Crerar, Minister of Agriculture for Canada.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Burnaby, B.C.—May 31—One of the British Columbia electric stations was destroyed.

Cloverdale, B.C.—May 27—House of Mr. and Mrs. Baner on the Pacific highway was destroyed. Estimated loss, $1,000.

Halifax, N.S.—May 31—Paint shop at the Nova Scotia Car Works was damaged. Estimated loss, $6,000.

Hamilton, Ont.—June 1—House of Mrs. Lane, 46 Main Street, was damaged. Cause reported as incendiarism.

Huntsville, Ont.—June 1—Store and stock of the Huntsville Trading Company was damaged. Estimated loss, $14,000.

Newcastle, N.B.—May 30—Residence of Thomas Maltby was damaged.

New Westminster, B.C.—June 1—Plant of the Brunette Sawmills was damaged. Estimated loss, $25,000.

Niagara Falls, Ont.—May 31—Stock pens in Grand Trunk yards were destroyed. Estimated loss, $60,000.

Poplar Island, B.C.—May 31—New Westminster Construction and Engineering Company's plant was damaged. Caused by the burning out of a 125 horse-power electric motor. Estimated loss, $1,200.

Port Robinson, Ont.—May 26—House of Mr. Smith was damaged.

Thorold, Ont.—June 2—Pulpwood pile of the Ontario Paper Company was damaged. Estimated loss, $50,000.

Vancouver, B.C.—May 29—Dwelling of R. H. Wise at 1378 Pender Street West was damaged.

May 31—Premises occupied by A. T. Martin, bicycle dealer, 319 Main Street, were damaged.

Vermont, Que.—May 30—The Y.M.C.A. at Island Pond was damaged.

Welland South, Ont.—June 4—Home of John Rumsan was damaged.

Welland, Ont.—June 4—Planing mills owned by Frank Rounds were damaged. Estimated loss, $10,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Quebec, Que.—May 8—Foundry and pattern department of the plant of La Fonderie de Victoriaville, Limiteé, was destroyed. Loss on stock, including patterns, $10,000; on building, $3,000. A total insurance of $5,000 was carried. The following companies are interested: Mutuelle de Commerce, Nationale de Paris and the London Mutual Fire Insurance Company.

Steveston, B.C.—Cannery buildings and wharf, owned and occupied by the Steveston Cannery Company, Limited, were damaged. Estimated damage on stock, $5,725; on buildings, $500. A total insurance of $7,500 was carried. The following companies are interested: Nova Scotia Insurance Company, $2,000; Connecticut Fire, $5,000; Springfield, $500. A few dwellings on the estate of the late David Mackey were damaged.

MONEY MARKETS

Messrs. Glazebrook & Cronyn, exchange and bond brokers, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	1 23-32	1 25-32	....
Mont. funds	Par	Par	⅛ to ¼
Sterling—			
Demand	4.8350	4.8375	4.86
Cable trans.	4.8460	4.8485	4.87

Rate in New York:—Sterling demand, 4.75⅜.
Bank of England rate, 5 per cent.

A pamphlet has been issued by the Toronto Stock Exchange, entitled "Safeguarding the Investor." The services of the exchange and of its members are outlined and the various facilities for safe investment. A complete list of the members of the Toronto Stock Exchange is also given.

INFLUENCE OF WAR ON MORTALITY

Heavy Toll Being Taken in England—Greatest Increase at Age of Twenty

The April Journal of the Institute of Actuaries, which has just come to hand, contains the results of an investigation by Mr. J. Burn, F.I.A., actuary of the Prudential Assurance Company, of the mortality experience of a very large number of policies on male lives assured under industrial policies.

The toll which the war is taking of the young and vigorous life of Britain is strikingly shown by a comparison of the actual rates of mortality experienced by the Prudential at ages 16 to 60 in the years 1913 and 1915-17.

For example, at age 20, the death rate, which was, in 1913, not quite 4 per 1,000, had risen to 20 per 1,000 in 1915, advanced to over 37 per 1,000 in 1916 and mounted to over 47 per 1,000 in 1917.

At age 30, the death rate in 1913, which was almost 5 per 1,000, was over 11 per 1,000 in 1915, over 19 per 1,000 in 1916 and 26 per 1,000 in 1917. Whilst at the older ages the increases are not so marked, yet at age 35 the death rate experienced in 1917 was over three times, and at age 40 almost double that in 1913.

Mortality Figures are Reliable.

As a comparison of the mortality experienced by the Prudential in 1913, a peace year, with that shown by the English Life Table No. 8, reveals a very close agreement, especially at the military ages, the figures above are a fair index of the extra mortality due to the war. The table given below reproduces in part that given by Mr. Burn:—

Death Rate per 1,000—Male Lives.

Age.	English Life Table No. 8.	Prudential experience. 1913.	1915.	1916.	1917.
16	2.59	2.90	4.67	4.04	3.74
20	3.48	3.97	20.08	37.31	47.42
25	4.00	4.41	13.76	25.72	35.07
30	4 78	4.99	11.68	19.15	26.01

50	14.82	16.09	17.81	15.51	14.13

LIFE INSURANCE RETURNS FOR BRITISH COLUMBIA

Business for Year Ended 31st December, 1917

On this page is a statement of life insurance business in the province of British Columbia for the year ended December 31st, 1917, prepared by Mr. H. G. Garrett, superintendent of insurance for the province. About 75 per cent. of the business it will be observed, is done by the ten largest companies, including three United States companies, viz., the Metropolitan Life, the New York Life and the Prudential.

The amount of life insurance in force in the province, viz., $95,309,232, is just a little less than 10 per cent. of the total in force in the Dominion, while the population of British Columbia is considerably less than 10 per cent. of the total population of the Dominion. The proportion per head is accordingly high as compared with the rest of Canada, and especially so if the foreign-born and Indian population were omitted. In the case of some companies, however, the proportion is higher. Some of these are as follows:—

	Prop. of business, British Columbia.
Crown Life	18%
Monarch Life	28%
Royal Insurance	31%
New York Life	12%

The life companies have investments in British Columbia totalling $16,000,000, about half being in mortgages and the balance in other securities. Most of the companies have their investments divided fairly evenly between these two forms, but the Confederation Life, Great-West Life, New York Life, Norwich Union and Standard Life have the most of their investments in mortgages, while many of the other companies invest almost all their funds in other securities.

Name of Company.	Premiums for the Year.	Number of Policies, new and taken up.	Amount of Policies, new and taken up.	Number of Policies in Force at Date.	Net Amount in Force.	Net Amount of Policies become Claims.	Claims paid including Matured Endowments.	Amount invested in British Columbia. On Mortgages.	On other Securities.

ONTARIO'S METALLIFEROUS PRODUCTION

Falling Off in Most Metals, But Production of Nickel and Iron Ore Increases

Returns received by the Ontario Bureau of Mines for the three months ended March 31st, 1918, are tabulated below. For purposes of comparison the quantities and values are given for the corresponding period in 1917:—

Summary of Metalliferous Production—First Quarter of 1918.

Product.	Quantity. 1917.	Quantity. 1918.	Value. 1917.	Value. 1918.
Gold (ounces)	127,692	113,387	$2,601,760	$2,265,521
Silver (ounces) ...	3,945,957	4,114,856	2,831,873	3,740,843
Cobalt (metallic) (lbs.)	84,710	37,545	78,668	75,625
Cobalt oxide (lbs.)	83,014	81,760	66,798	130,486
Nickel oxide (lbs.)	5,495	......	550	......
Nickel (metallic) (lbs.)	......	44,154	......	17,662
Other Cobalt & nickel compounds (lbs.)	118,292	143,381	13,695	18,386
*Nickel in matte (tons)	10,141	9,677	5,070,410	5,806,200
*Copper in matte (tons)	5,063	4,727	2,025,227	1,748,990
Copper ore (tons) ..	1,507	......	44,097	......
Iron ore (tons)	23,035	32,530	58,205	127,916
Pig iron (tons)	163,020	148,752	2,743,441	3,948,209
Molybdenite, concentrates (lbs.)	25,073	17,410	32,202	24,548
Lead, pig (lbs.) ...	263,046	60,283	27,290	5,066

---

*Copper in matte was valued at 20 cents and nickel at 25 cents per pound in 1917. For 1918 the values have been placed at 18½ and 30 cents per pound, respectively.

Gold.

Production for the quarter shows only a small decrease which is a creditable showing considering the various handicaps under which gold miners are laboring. The Hollinger Consolidated had an increase in production which was offset, however, by the closing down of the Dome mill. The Croesus mine in Munro township has closed down temporarily. At Kirkland Lake, a new producer, the Lake Shore, has been added to the list. During the quarter 262,577 tons of ore were milled with a recovery of 113,387 ounces of gold and 20,221 ounces of silver, as compared with 350,916 tons milled during the corresponding period in 1917. Hollinger produced 68,804 ounces of gold and McIntyre 21,461 ounces, the next largest producer being the Porcupine V.N.T. The Patricia Syndicate at Boston Creek expect to have their new mill in operation about June 1st.

Silver.

Shipments of silver for the first quarter of 1918 show a small increase in quantity and a considerable increase in value. The average New York price for the period was 87.5 cents per fine ounce, or nearly 12 cents increase, as compared with the corresponding period in 1917. The passing of the Pittman bill in the United States recently has established, virtually, a price of $1 per ounce. Companies shipping one quarter million ounces or over are named in order: Nipissing, Kerr Lake, Mining Corporation of Canada, Buffalo, O'Brien and Coniagas. The Mining Corporation of Canada has been remodelling its mill in order to re-treat a large tonnage of tailings from the Cobalt Reduction mill. At the McKinley-Darragh a new 200-ton oil flotation plant has been put in operation. Of a total of 4,114,856 ounces shipped, 20,221 ounces are credited to silver recovered from gold ores.

There were treated at Southern Ontario refineries during the quarter 1,242 tons of ore and concentrates and 1,483 tons of residues from Cobalt and out-lying silver camps. Silver bullion recovered was 1,610,989 ounces, worth $1,394,599. In addition, arsenic, cobalt and nickel oxides and sulphates, nickel carbonate, metallic nickel and metallic cobalt were produced. Of the latter, 22,752 lbs. were used in the manufacture of "stellite," which is a cobalt alloy used as a high speed cutting tool. One feature of note is the great increase, 100 per cent., in value of cobalt metal and oxide due to the increasing uses and demand for these products.

Production from Copper Cliff and Coniston smelters for the quarter shows a small decrease as compared with the same period in 1917. Ore was raised from the Creighton and Crean Hill mines of the Canadian Copper Co., the Alexo, and the following mines of the Mond Nickel Company: Garson, Victoria No. 1, Worthington, Levack and Bruce. Of a total of 354,689 tons raised, about 70 per cent. came from the large and rich Creighton ore body. There were 325,386 tons of ore smelted in the period with a resulting product of 17,992 tons of nickel-copper matte.

The British-America Nickel Corporation has acquired a site to erect its $1,000,000 refinery on the Quebec side of the Ottawa River, between Aylmer and Hull. The new refinery of the International Nickel Company of Canada at Port Colborne is nearing completion.

Iron Ore and Pig Iron.

Shipments of iron ore were made from the Helen and Magpie mines of the Algoma Steel Corporation. Hematite ore from the Helen is shipped to the Magpie where it is mixed with siderite ore and roasted. The entire shipments from the Magpie went to the Sault blast furnaces. From Moose Mountain, Limited, Sellwood, shipments were made of magnetic concentrates, briquetted and converted to hematite in a kiln. Only 447 long tons were exported to the United States during the quarter. At Sault Ste. Marie, Port Colborne, Hamilton and Deseronto eight blast furnaces were in operation. The tonnage smelted was 34,552 tons of Ontario ore and 260,476 tons from the United States. As shown by the table, the output of pig iron was considerably less than for the corresponding period last year.

Molybdenite.

Molybdenite ore, to the extent of 1,295 tons, was treated by the Mines Branch, Ottawa, and by the Renfrew Molybdenum Mines, Limited, at Mount St. Patrick. The output of the last-mentioned company is shipped direct to France. There are works at both Orillia and Belleville for the production of ferro-molybdenum.

Lead.

The entire output of pig lead resulted from the operations of the Galetta lead mine and smelter owned by the Jas. Robertson Estate, Montreal. During the quarter 3,347 tons of ore were mined. The smelter operated during the last few days of March only. Operations by the Kingston Smelting Company ceased in December of last year.

OSHAWA SELLS BONDS

The town of Oshawa has sold a block of $38,000 bonds to Messrs. Neely's, Limited, of Toronto. These bonds bear interest at the rate of 6 per cent., and are payable in twenty annual instalments.

BRITISH CROWN ASSURANCE ACQUIRED

The Eagle, Star and British Dominions Insurance Company is absorbing the British Crown Assurance Corporation of London, England. No particulars regarding the transaction have as yet been received here. At December 31st, 1917, the British Crown Assurance Company had $24,827,820 of insurance in force in Canada. During the year 1917 $229,620 was received for premiums, and $156,147 was paid out for losses. The Eagle, Star and British Dominions has $16,705,127 of insurance in force in Canada; net cash received for premiums, $121,042, and net amount paid for losses, $71,789.

The head office of the British Crown Assurance Company is in London, England, and the registered office in Glasgow. It was incorporated in 1907, and commenced to write fire insurance in Canada in 1911. The present manager for Canada is Mr. J. H. Riddel, who was originally in the company's Glasgow office, then in London, and later as assistant manager of the Canadian office in Toronto. He became manager for Canada in May of last year.

Dale and Company are the Canadian agents of the Eagle, Star and British Dominions Insurance Company.

The post-office revenue in St. John, N.B., in 1917 was $221,846, as compared with $209,470 in 1916.

MORTGAGE LOANS ASSOCIATION OF MANITOBA

Loans are in Good Condition—Important Results Accomplished in Legislation

The annual general meeting of the Mortgage Loans Association of Manitoba was held on May 15th, in Winnipeg, with the president, Mr. Paton, in the chair. The report of the executive committee was presented as follows:—

"Your executive beg to report that the year just ended has been freer from legislation of a disturbing nature than has characterized its three immediate predecessors.

"Although such is the case, we are still laboring under oppressive enactments of former years, and your committee have endeavored from time to time to get as much relief from these as possible.

Seed Liens (Provincial).

"Early in the fall your executive urged on the provincial treasurer that every effort be made to collect from the proceeds of the 1917 crop all amounts advanced by Manitoba municipalities for seed grain purposes. He agreed to bring this matter to the attention of the secretary-treasurers of the various municipalities. Later in the year we were advised that the government had advanced $404,222.65 to the municipalities for seed grain advances and that this sum had been repaid in full. It was found, however, that while this was the case many of the farmers had not repaid the advances received from the municipalities, and a list of these defaulting farmers was recently obtained and a copy sent to each member of the association.

"Further representations were made to the provincial treasurer that if the government made any advances in future to the municipalities for seed grain, the municipalities should be required to collect the same from the resulting crop and in any event should not be permitted to register the indebtedness as a charge against the land taking priority to first mortgages. The treasurer expressed his approval of the principle involved and gave your executive committee to understand that the Seed Grain Act would be repealed and a special act passed at each session when required, such act to apply only to the ensuing season. This has not yet been done but your executive hope that the treasurer's promise will be fulfilled next session.

Noxious Weeds Act.

"In February your executive held a joint meeting with the executive of the Manitoba Grain Growers' Association, and, as a result of the representations of the latter body, it was decided not to oppose the desire of the municipalities to restore their right to charge the expense of destroying noxious weeds in the same manner as taxes. A bill was passed during the session restoring the old conditions, and suggestions made by the Grain Growers and your representatives were incorporated as follows:—

"1. That a non-resident owner might nominate to the secretary-treasurer some resident of Manitoba as his agent; and in such case, if the value of any work exceeds $25, the weed inspector is required to notify such agent by registered letter giving the owner 15 days within which to destroy the weeds himself if he desires to do so rather than have it done by the municipality.

"2. Not more than $150 against 160 acres in one year may be charged for destruction of noxious weeds save with the written approval of the provincial weeds commissioner.

Dower Act.

"This is one of the acts regarding which your executive thought it advisable to instruct the solicitor of the association to attend the House while these were under discussion before the committee; and while he did not challenge its principle, he succeeded in securing some changes which were desirable from a mortgagee's standpoint, such as, 'Nothing in this act shall alter, affect or prejudice the rights of any party under any contract entered into or obligation assumed or security given or agreed to be given prior to the coming into force of this act'; also, the act prescribes forms of affidavits, acknowledgment, etc., and provides that where these forms are complied with in good faith, no mortgagee or other person acquiring an interest in land is bound to make inquiry as to the truthfulness of the facts alleged but upon delivery of an instrument purporting to be completed in accordance with the act the same shall be valid and binding.

"The general effect of the act, which comes into effect on September 1st next, is that a married man can make no disposition of the home (rural, 320 acres; urban, 6 lots) without the written consent of his wife; also he cannot by will dispose of the home save subject to the wife's life interest and a wife is entitled to at least the equivalent of a one-third interest in the husband's entire estate notwithstanding the provisions in any will made by him.

War Relief Act.

"This act was originally passed in 1915 and amended in 1916 and 1917. This previous legislation was with certain amendments consolidated into a new act, which, while it did not meet all the suggestions preferred by your committee, nevertheless, is a great improvement on the legislation hitherto in force. The following changes should be noted:—

"(1) Protection is extended to the naval and air services and to draftees under the Military Service Act.

"(2) Rent is included as among 'necessaries,' debts for which carry no privilege save that the ordinary right of distress against a soldier's family is withheld.

"(3) A mortgagee is now entitled to the rentals or rentable value from all premises whether occupied by soldiers' families or not to the extent of overdue interest, insurance and taxes, with the right to recover possession, but not to distrain against a soldier's family in the event of non-payment.

"(4) Contracts made after enlistment are given no privilege.

"(5) Where a soldier's interest is, in the opinion of a district registrar shown to be only nominal, such official may allow proceedings to go forward.

General.

"Your committee gave considerable attention to the question of Dominion seed grain liens and the efforts which were being made to expedite their collection as well as to effect some arrangement with the Dominion government for the equitable apportionment of liens registered against two or more quarter-sections concurrently. Various memoranda were submitted by the secretary of the Dominion Mortgage and Investments Association to which replies were formulated embodying suggestions for the consideration of the minister of the interior. This and other Dominion matters, as well as questions affecting other provinces, have been dealt with very fully in the bulletins from the secretary of the Dominion Association and your committee feel that it is unnecessary to add anything thereto."

The president then discussed the year's business as follows:—

"The report just read by the secretary is somewhat lengthy and covers almost all of the activities of the executive during the past year, so that there does not remain much for me to say in moving its adoption.

"It will be recalled that early in the year Mr. W. D. Love was appointed secretary, our former honorary secretary, Mr. W. Bain, having expressed his wish to be relieved of the duties of that office. We have reason to congratulate ourselves on this appointment, Mr. Love having been most assiduous in his attention to the interests of the association, and his work has been such that the duties of the president have, to a large extent, been nominal.

Changes in Executive.

"The members of the executive have taken an active interest in the questions under discussion from time to time. We have had the misfortune to lose the counsel of three of them during the year—namely, Messrs. Strathy, Fontein and Pickett. Mr. Strathy had served the association long and well; had been my immediate predecessor in the presidency, and it will be remembered how enthusiastic he was in doing all the work that fell to his lot while in that office. He has left us, as you are aware, by reason of his promotion with his company in Toronto. Mr. Fontein was one of the most regular in attendance at the meetings while on the board and his interest was always of a most intelligent nature. I am sure that I speak the mind of the other members when I express the hope that he may soon find another outlet for the exercise of his ability and in which advantage may be had of his experience. Owing to his frequent absences from town since his election to the board, Mr. Pickett was unable to give the association that benefit which I am sure he would have given had he been here. He is to be congratulated on his promotion to a position which he is well qualified to fill.

"Through the courtesy of its president, I had the privilege of attending the annual meeting of the Dominion Mortgage and Investments Association in Toronto in March last. It was most interesting and profitable to meet so many men

A Newspaper Devoted to Municipal Bonds

THERE is published in New York City a daily and weekly newspaper which has for over twenty-five years been devoted to municipal bonds. Bankers, bond dealers, investors and public officials consider it an authority in its field. Municipalities consider it the logical medium in which to announce bond offerings.

engaged in mortgage loaning and to hear the papers contributed by some of the members. I had the pleasant duty of reading one prepared by one of our own members, Mr. Crossin, and you will be pleased to know that it was much appreciated. There were two business sessions, morning and afternoon. The Saskatchewan Association was represented by Mr. Thom, its solicitor, and the Alberta Association by Mr. McKay, of the Manufacturers' Life, both of whom were called upon to speak. A dinner was held in the evening at which several addresses were given, the principal speaker being Sir Robert Falconer, president of the Toronto University, who gave us a most inspiring address on the economic conditions brought about by the war, and the duty devolving on us as citizens during the reconstruction period after it has ceased.

"We are pleased to have with us to-day Mr. Appleton, the secretary of the Dominion Association. He has been attending the annual meetings of all the associations west of us and he will, no doubt, have something of interest to say to us.

Policy of Government re Farm Loans.

"There is one item of interest which has not been dealt with in the report, that is, a visit made by the members of the executive and a few others interested in mortgage loaning, to the members of the provincial government a few days ago. The object of the interview was to learn, if possible, the intentions of the government as to their continuing the mortgage lending scheme adopted by them a year or so ago, the result of which scheme so far seems to have mainly been to take good investments from other lenders. We had quite a discussion in the premier's office, and while we did not get much encouragement, we were given the assurance, both of the premier and the treasurer, that the Farm Mortgage Association are not lending at less than cost as we supposed. Evidently, they have had access to some cheap money, but this is not likely to last and already the government has had under consideration the increasing of the rate of interest to 6½ per cent. We had the further assurance of these two ministers that they would not lend under cost, and as soon as they ascertain that they cannot afford to lend at the present rate, an increase will be made; and I think that we shall not have long to wait for this increase, as it is difficult to see how the present rate can be maintained in the face of existing conditions in the money market."

Mr. Appleton, the secretary of the Dominion Mortgage and Investments Association, was present at the meeting, and in the course of his remarks mentioned the necessity of adopting certain amendments to the constitution of the Dominion Association, the desirability of printing a year book, and the improved relations existing between the provincial loaning associations and the respective provincial governments. A report was also submitted by Mr. A. L. Crossin, who represented the association at the Farm Mortgage Bankers' Convention at Minneapolis. Mr. John Paton was re-elected president for the coming year, and Mr. A. S. Bond was elected vice-president.

LA BANQUE NATIONALE

In spite of a falling off in demand deposits, the annual statement of La Banque Nationale indicates good progress during the year. Savings deposits, on the other hand, have increased by almost $1,000,000. The profits for the year are $435,283, as compared with $417,622 last year. The dividend rate has been raised from 8 per cent. to 9 per cent. per annum, so that an additional charge of 1 per cent. on the capital stock of $2,000,000, or $20,000 per annum, has been incurred. It had been decided to increase the dividend rate as soon as the reserve fund equalled the capital stock, which was the case at the end of the last financial year. The sum of $100,000 was again appropriated to reserve this year, and additional reserves were set aside for buildings and furnishings. The balance in profit and loss is now $35,249.03.

Circulation shows a large increase for the year, viz., almost $700,000. A balance of $5,444,435 is owed to the Dominion government.

The bank's specie, Dominion notes and deposit in the central gold reserve have been increased from $3,354,645 to $4,219,081. A remarkably large increase in holdings of Canadian government securities has taken place, viz., from $1,800,000 to $4,461,000. Holdings of Canadian municipal, British and other public securities have, on the other hand, been reduced from $2,849,997 to $1,503,746.

La Banque Nationale has completed its fifty-seventh year of business. The board of directors has changed very little during the past twenty-three years, Mr. R. Audette still being president, and Mr. N. Lavoie, general manager.

THE CANADIAN SUGAR SUPPLY

There seems to be every prospect of considerable sugar being obtained for Canada from Hawaii. A total of 25,000 tons has, it is reported, been arranged for to be shipped to Vancouver for the British Columbia Sugar Refinery. Already one ship has arrived. It is expected that the Hawaiian crop this year will be about 600,000 tons. Ordinarily, about one-third goes to Atlantic ports; this year, however, the tonnage is not available and railroad transportation is congested, and the result may be that more than usual will arrive at Pacific ports.

INCREASED PRODUCTION AND LABOR PROBLEM

"The province of Alberta has brought distinction and no small honor to itself by its heroic efforts to meet the national call and needs at this time," said Mr. Charles S. Hotchkiss, of the publicity department of the province of Alberta, to *The Monetary Times* last week in Edmonton. "Early in the year, as everyone knows, there was a national call for 'greater production,' and the manner in which this province rallied to the call has brought distinction and honor in no small degree. Having already given nearly thirty-five thousand of its sons for battle in France, the great question was not land for production, but men to work the land. This problem was faced by the provincial government and the farmers of Alberta in a very practical way. Although it seemed at first that sufficient farm help could not be found, it was found, and within thirty days after seeding commenced there was reported an actual surplus of farm labor in that province. This was the result of united and intelligent co-operation between the provincial government and all the local organizations.

"Special representatives were sent out, calling for men. Each city held its public meetings, calling for the release from mercantile institutions of all men qualified to work on the land. Provincial farm labor bureaus were opened in all the leading cities, and this co-operation resulted in overcoming the great need for farm help.

"The season opened about three weeks earlier than usual, and the weather continued favorable for seeding operations and permitted the farmers to utilize their forces to the fullest extent.

"The provincial government undertook, in addition to the programme above referred to, to split the province into thirteen different zones, and to place a qualified agriculturist in charge of each to assist the farmers in solving their problems for greater production. These men have motor cars and a regular office with assistants, and report all needs for help of every nature. Arrangements have been made to use these men in the special capacity of field agents for a period of not less than four months.

"The outlook to date is that a very large increase in production may be confidently expected. Although the exact acreage will not be known until a little after the middle of June, the minister of agriculture believes that there will be an increase of not less than 40 per cent. in the acreage seeded this year. If so large an increase actually takes place, it will reflect great credit not only on the government forces, but on the people of that new province, which shows, in a measure at least, sensitiveness of the national needs and demands. A few days ago its leading farmers' organization (the United Farmers' Association) resolved to cheerfully accede to the government's call to give its young men off the farms for military service. This, in counter distinction to the super-loyalists of Ontario, is at least refreshing.

"The extraordinary crops produced by that province during the past three seasons has awakened an interest in its lands that is bearing fruit to-day, as the call for land from men with means and the practical farmers of the south is greater than ever before. During the past three months the transactions of land transfers exceeds by more than 50 per cent. any previous season. The majority of this land is reported to be purchased for the purpose of immediate crop production, many tractors and complete farming outfits being purchased simultaneously with the land. Consequently, there is a very bright outlook for a still larger increase in production for 1919. Should they be rewarded with another good crop this year, and every indication points to that end, nothing can stem the tide of an extraordinary immigration into that splendid district."

Incomes for Dependents

It is often considered a wise plan to provide a fixed revenue for those who are dependent. The most convenient method of establishing a steady income is to create a Trust Fund to be administered by a Trust Company, which invests the original sum, and remits regular payments to the beneficiary. We request any person interested to write or call for full particulars about our management of Trust Funds.

The Absence of a Will

The law gives you the privilege of governing by a will the distribution of your property after your death.

Lacking a will, the law requires your property to be divided in a fixed, definite way, according to the number and nearness of your surviving relatives.

The latter method may give results quite different from the ones you would have wished.

Have your will drawn by a lawyer. About executorship, ask for our booklets, or consult us.

DEATH OF JOHN ROSS ROBERTSON

Founder of Toronto Telegram and Well-known Philanthropist Passed Away

On Friday, May 31st, Mr. John Ross Robertson died in Toronto of pneumonia, after about two weeks illness. Mr. Robertson was well known throughout Canada as the founder and proprietor of the Toronto "Telegram," as the patron of the Hospital for Sick Children, a prominent Freemason and a writer on historical subjects. The late Mr. Robertson was born in Toronto on December 28th, 1841, and was educated at Upper Canada College. During his early years he published several papers, including "Young Canada," "Sporting Life," and "The Grumbler." He was on the staff of the "Toronto Leader," "The Globe," and the "Daily Telegraph" for some time, and in 1876 he founded the "Evening Telegram." *The Monetary Times*, which appeared in 1867, in the form of a 16-page sheet, was first printed in his shop. It was through his generosity that the Hospital for Sick Children of Toronto was founded, and he contributed altogether about half a million dollars towards its support. He was chairman of the board of trustees, and took an active part in the management almost until his death. The Lakeside Home in the Island was also constructed largely at his expense. In the Toronto Public Library there is a collection of pictures and maps regarding the early history of Toronto and the surrounding districts, bestowed by him, which is said to be the finest in existence. In January, 1917, the late Mr. Robertson was offered a knighthood and a seat in the Canadian Senate, both of which he declined.

Freemason and Orangeman.

The late Mr. Robertson was not only a well-known Freemason, but also was the author of several volumes on the subject, notably the "History of Freemasonry in Canada." He was Master of King Solomon's Lodge, Toronto, in 1880, and Grand Master of the Grand Lodge of Canada in 1890. Mr. Robertson was also one of the oldest Orangemen in Toronto, having been a member of that order for 58 years. He was for many years president of the Canadian Copyright Association, of the Canadian Associated Press and honorary president of the Toronto Press Club.

NEW ELEVATORS FOR SASKATCHEWAN

The programme for 1918 of the Saskatchewan Co-operative Elevator Company includes the building of eleven new country elevators in the province of Saskatchewan. The elevators are expected to cost at least $140,000, and will have a combined storage capacity of 385,000 bushels. The elevators will be located at the following points: Scott, Vidora, Kinley, Beverley, Senate, Drake, Melfort, Surbiton, Glidden, Lawson and Tompkins.

INCOME TAX RETURNS

The time for making income tax returns to the Dominion government expired on May 31st. Letters are now being sent out by the commissioner of taxation to those who have not yet made out their returns, and those who fail to make returns after receiving notice will, it is stated, be subject to a penalty of $100 per day for every day of default.

CANADIAN TRADE BALANCE WITH UNITED STATES

The minister of finance has this week taken steps to remedy the acute exchange relations existing between Canada and the United States. The cause of the difficulty is the excessive trade balance against us. Gold has been shipped in large quantities to New York recently, as much as $4,000,000 having been sent within the past month. An embargo has been placed upon the export of gold coin, fine gold bars and gold bullion, unless under license obtained from the finance department. According to Mr. White, there is a danger that Canada's gold reserves would be seriously depleted.

An order-in-council has also been passed prohibiting the importation of certain goods except under license issued by the minister of customs on the recommendation of the War Trade Board. The classes of goods aimed at are the luxurious and non-essential, such as billiard tables and cues, pleasure boats, skiffs and canoes, sporting guns and rifles and the ammunition therefor, fishing rods, etc. A number of fruits and vegetables are also included which are either grown in Canada or whose food value is negligible. The list also includes automobiles valued at $1,200 and over, paintings, manufactures of gold and silver and of marble, etc.

SASKATCHEWAN LIFE INSURANCE COMPANY

According to the annual report of the Saskatchewan Life Insurance Company, which appears in this issue, their business is still undergoing a healthy and steady growth. The company was organized in 1915, with a paid-up capital of $100,000. It already has a surplus of $22,356 and a contingency reserve fund of $7,500. The losses for the year 1917 were $4,498, while the premium income was $71,165. This loss was somewhat less than for the previous year, although the company has about 50 per cent. more insurance in force. On December 31st, 1916, the amount of insurance in force was $1,626,364. During the year a total of over $1,000,000 was issued, and on December 31st, 1918, the amount in force was $2,315,306.

The expenses of management for the year were $48,809. This is an increase over the expenses of the previous year, but not as large as the increase in business. The excess of income over expenditure for 1917 is $38,123 as compared with $13,500 for the previous year. The number of policies issued during the year was 543, and the number in force is now 1,299.

The company confines its operations to the province of Saskatchewan, and in this way is able to keep its expenses low. It is the only company with head offices in that province, is owned and operated by local men, and 90 per cent. of the business is secured in rural districts. The company did contemplate securing a license to do business in Alberta, but decided that Saskatchewan alone offered a sufficiently wide field.

The president of the company is Mr. Charles Willoughby, and Mr. F. F. Conrod is managing director. The other directors are: Geo. H. Barr, Wm. H. Duncan, Thos. Less, David Low, Hon. W. M. Martin, A. A. Meneley, Wm. T. Mollard, H. O. Powell, J. W. Sifton. Mr. C. C. Sinclair, B.A., F.A.S., is the actuary for the company.

At the annual meeting on May 8th this report was adopted, and the same board of directors was elected. An interim report for the first four months of 1918 had also been prepared, which showed a further increase in all departments.

Every pound of food saved by each Canadian citizen is a pound given to the support of our army and our Allies. Every pound wasted or eaten unnecessarily is a pound withheld.

The Hamilton Provident and Loan Society

AGRICULTURAL CONDITIONS IN ONTARIO

Fall Wheat is Poor, But Other Crops and Produce are Promising

The following is a summary of reports made by agricultural representatives to the Ontario Department of Agriculture, up to May 27th, 1918:—

Spring grains were never more promising at this stage. Sowing is practically completed, although some oats remain to be put in in a few localities. Corn is already up in Essex, but elsewhere a good deal of the crop yet remains to be planted. Regarding the handling of silage, the Dundas representative makes the suggestion that if organized gangs for silo filling could be arranged the same as for threshing, it would help out considerably. Early potatoes are showing in Essex, and all over the province planting of the tubers is general. Reports from Essex state that Early Warren tobacco plants have been set out. Sugar beets and mangels are receiving much attention this season in many quarters and are being sown somewhat earlier than usual. The Huron representative states that onions in the form of Dutch sets are doing well in the Hensall and Exeter districts, and that many of the lots are an acre or more in size. The ground is working up nicely for hoe crops.

Although fall wheat has been considerably improved by the very favorable weather of the last two or three weeks, the heavy injury done early in the spring leaves the crop with the very poorest of prospects. Clover is growing fast, and gives promise of a fair general yield, even though many fields are rather spotted.

Livestock and Dairy Products.

Livestock have now plenty of pasture, and are fast improving in appearance. Good prices are offering for both beef and dairy animals, yet there is a tendency among some farmers to sell off stock owing to the scarcity of labor. Beef cattle are fetching from 12 cents to 15 cents a lb. Dairy cows are at a premium, commanding from $100 to $140, and in some cases $200 each. The milk flow is estimated as slightly in advance of the same period last year.

Hogs are being marketed at from $19.50 to $20 a cwt. The Peel representative reports that a farmers' club at Caledon has begun the co-operative marketing of hogs and cattle, and the experiment promises to be successful. People in towns and villages are buying young pigs at from $6 to $8 each. The Norfolk representative says that those who have pigs to sell now know that they were justified in keeping more sows. Feed difficulties, however, are hard to overcome.

There promises to be an increase in the number of sheep, as more land is being given to pasture. Wool is bringing from 60 cents to 65 cents a pound on Manitoulin Island. Grains and mill feeds are scarce and dear. Hay is plentiful, selling at from $15 to $18 a ton. There is a fair supply of straw and roots for roughage, but ensilage was never so scarce so early in the season.

There is still restlessness among farmers over the operation of the latest amendments to the drafting regulations, although the remarkably open weather for spring seeding has greatly eased the immediate labor situation.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended June 1st, 1918:—

La Rose Mines, 65,995; Buffalo, 65,910; Kerr Lake, 60,253; Nipissing Mining Company, 260,855; Mining Corporation of Canada, 325,785; McKinley-Darragh, 169,341. Total, 948,139.

The total shipments since January 1st now amount to 11,147,012.8 pounds, or 5.483.3 tons.

Despite the difficulty, we must produce more food than we have ever done before. Set apart all your land fit for growing crops and plant as much wheat as you can. Plan to bring as much new land under cultivation for another crop as possible, and thus increase acreage for next year. It will be needed then just as much as now.

CONDITIONS GOOD IN SASKATOON DISTRICT

Business Brisk in Saskatoon—Crop Conditions Favorable —Houses at a Premium

(Staff Correspondence.)

Saskatoon, Sask. May 31, 1918.

Crop conditions in the North Saskatchewan district are very favorable and present indications point to a record harvest. The season opened fully two weeks earlier than last year, seeding conditions being ideal. Several days of warm weather caused rapid germination and the wheat was well above ground. For the past three weeks, however, there has been very heavy frost at night, considerable rain has fallen, and on the 17th inst., there was a general fall of snow of four inches over all the North Saskatchewan district. This snow storm was appreciated more particularly along the Goose Lake line where the land was becoming somewhat dry. Some fear has been expressed that the earlier sown grain has been injured by the severe frost, but the cool weather following, together with the moisture in the ground has averted the danger which might have been caused under more adverse conditions. Growth will be very rapid now that the warm weather has arrived. There is a considerable increase in the acreage sown this year, due to the fact that there was more summer fallowing and breaking done last year than ever before. The farmers, with the prospect of another good crop, are increasing their holdings. The demand for improved lands is steadily increasing and the prices being paid, which range all the way from $20 to $65 per acre, are an indication of the confidence in the country, held not only by our Canadian farmers, but also by our neighbors to the south, numbers of whom have purchased land during the past three months.

Loan Situation.

The demand for money for farm loans is very good, caused by so many farms changing hands. Some of the loan companies are doing considerable business in this line at present. Interest rates are at the usual rate of 8 per cent.

Business Brisk in Saskatoon.

General conditions in Saskatoon have been quite brisk this spring. The house situation has been an interesting one, and quite a number of houses have changed hands and tenants have been constantly on the move looking for new homes.

The building trade is not as brisk as it was last year owing to the high cost of material and the scarcity of labor. Although quite a number of residences have been erected in various parts of the city rents are all up and there are very few vacant houses.

The J. H. Ashdown Hardware Company, who were recently burned out, have let a contract to erect a new building twice the size of the original one, work on which will start immediately.

All lines of business report improvement over last year and the outlook is very optimistic.

OUR RELATIONS WITH RUSSIA

Mr. C. F. Just, Canadian trade commissioner in Russia, arrived at Ottawa a few days ago after a difficult journey by way of Finland, Sweden and England. He declares that the Allies must not abandon Russia. While it is difficult to say just what is the best means of assistance at present, he favored the suggestions regarding the formation of commissions of the allied countries to establish the national services of Russia on a solid basis as soon as a responsible government has been formed. Before going to Russia in 1916, Mr. Just was Canadian trade commissioner in Germany.

The Russian government now is asking for a loan from the allied countries, and is apparently aware of the necessity for maintaining its credit abroad. There is accordingly not much chance that the repudiation of her foreign loans will be maintained. The National City Bank of New York has undertaken to pay the interest on the 5½ per cent. internal loan bonds which were sold in the United States in the fall of 1916 and in 1917. As regards actual assistance to Russia, it is proposed to purchase food and other supplies in other countries, including Japan, to assemble them in Siberia and distribute them in European Russia.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Sarnia, Ont.—The city has sold a block of $95,000 local improvement bonds.

Toronto, Ont.—A Toronto syndicate, comprising Messrs. A. E. Ames and Company, Dominion Securities Corporation and Wood, Gundy and Company, has purchased a block of $835,000 6 per cent. bonds, payable in 30 annual instalments.

Montreal, Que.—A temporary loan of $500,000 was authorized by the legislative commission on June 1st in anticipation of revenue. The amount is a part of the loan recently approved by the city council for the same purpose.

Calgary, Alta.—Arrangements have been made for financing the city by putting $2,300,000 worth of 10-year treasury notes on the market through the bond houses of Messrs. G. A. MacPherson, A. E. Ames and Company, Wood, Gundy and Company and the Dominion Securities Corporation.

Newcastle, N.B.—The finance committee of the Northumberland municipal council has sold the $40,000 worth of patriotic fund bonds to the Eastern Securities Corporation at 97.6. The bonds bear 6 per cent. interest, and are in four issues of 5, 10, 15 and 20-year periods, in denominations of $500.

Sherbrooke, Que.—In last week's issue of *The Monetary Times* it was stated that the city's issue of $500,000 of bonds had not as yet been placed on the market. This was not correct. Hanson Brothers, of Montreal, have purchased bonds to the amount of $150,000, which is the total issued at present, from the city, and have resold them all to investors in the province.

Essex Border Utilities Commission.—Approval has been secured from the Department of Finance, Ottawa, for the issue of $210,300 6 per cent. bonds for the construction of trunk sewerage works, to serve part of Sandwich East, Ford City, Walkerville, Windsor, Sandwich, Sandwich West and Ojibway. These seven municipalities are incorporated in the commission by act of parliament. The particulars of the issue will be announced shortly.

Edmonton, Alta.—Sealed tenders will be received by the debenture branch of the Department of Education until June 10th, 1918, on five blocks of school district debentures amounting to $15,750. Separate tenders are to be made on each block. Block No. 1, Rural, 10-years 7 per cent.—Lewis S.D., $1,600, dated April 2nd, 1918; Two Rivers S.D., $500, dated April 15th, 1918; Fifteen Mile Lake S.D., $1,500, dated April 15th, 1918; total, $3,600. Block No. 2, Rural, 10-years 7 per cent.—Amethyst S.D., $1,500, dated June 1st, 1918; Wilcox S.D., $1,200, dated April 15th, 1918; Shank's Lake S.D., $1,000, dated April 15th, 1918; total, $3,700. Block No. 3, Rural, 10-years 7 per cent.—Shaftesbury S.D., $1,200, dated May 15th, 1918; Creek Valley S.D., $750, dated April 2nd, 1918; Hillanvale S.D., $1,200, dated June 1st, 1918; total, $3,150. Block No. 4, Rural, 6-years 7 per cent.—Hillman S.D., $300, dated June 1st, 1918. Block No. 5, Consolidated District, 10-years 7 per cent.—Sundial Con. S.D., $5,000, dated June 1st, 1918. (Amount of issue authorized, $12,000; sold locally, $7,000; balance for sale, $5,000.)

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from May 20 to May 23, 1918:—

School Districts.—Shellbrook, $6,000 20-years not ex. 8 per cent. instalment; G. R. Branscombe, Shellbrook. Carnduff, $2,500 20-years not ex. 8 per cent. annuity; John Shier, Box 95, Carnduff. Brooksfield, $2,500 10-years not ex. 8 per cent. annuity; H. J. Brooks, Archive.

Rural Telephone Companies.—Richburg, $8,400 14-years not ex. 8 per cent. annuity; R. M. Miller, Avonlea. Hilldrop, $1,000 15-years not ex. 8 per cent. annuity; W. A. Benson, Hilldrop.

Village.—Estuary, $9,000 10-years not ex. 8 per cent. instalment; L. H. Wallace, Estuary.

The following is a list of debentures reported sold from May 20 to May 23, 1918:—

School District.—Freeman, $2,000; Canada Landed and National, Winnipeg.

Rural Telephone Company.—Neptune, $8,900; W. L. McKinnon and Company, Regina.

Village.—Loverna, $3,000; Waterman-Waterbury Manufacturing Company, Regina.

RED DEER TREASURY BILLS

There appeared in *The Monetary Times* last week, an advertisement asking for tenders for $24,000 Red Deer treasury bills. This advertisement again appears in this issue, but attention is called to the fact that the rate has been changed from 6 per cent. to 7½ per cent., and the bonds will be payable not at the Bank of Montreal, but at the Imperial Bank of Canada at Red Deer, Toronto and Montreal, and at the Bank of the Manhattan Company, New York. The following is a statement of the city's present financial condition:—

Assessed value for taxation:

Land	$2,620,670
Exemptions	424,400
Business	52,032

Note.—Improvements are not assessed.

Tax Rate, 1918:

	Mills.
General	9.5
Debenture	8.5
School	7
Total	25

Debenture debt (total)		$340,670.79
Less waterworks debt	$87,304.87	
Less local improvement debt	81,809.47	
		169,114.34
		$171,556.45
Assets, 31st December, 1917		$698,455.28
Revenue, 1917		107,635.72
Expenditures, 1917		92,766.17
Surplus		$ 14,869.55

The population of the city is 3,000, and it covers an area of 1,000 acres. The present floating debt is $23,700.

MR. F. M. HOLLAND DIES

Mr. Frederick M. Holland, formerly general manager of the defunct Dominion Permanent Loan Company, died in Toronto on Tuesday, May 4th. He had already been suffering from a general breakdown, and his illness was aggravated by the difficulties in connection with the company's failure. He had been connected with the Dominion Permanent Loan since 1890, when he entered it as assistant bookkeeper. The late Mr. Holland was also a director of the Trusts and Guarantee Company and of the Imperial Cotton Company. For several months prior to his death he had been awaiting trial in connection with the company's affairs.

UNITED GRAIN GROWERS SECURITIES COMPANY

A company, called the United Grain Growers Securities Company, has been organized, and is owned and controlled by the United Grain Growers, Limited, of Winnipeg. The objects of the new company are to act as a medium through which farm lands may be bought or sold, and to give a full, detailed report and appraisal on any parcel of land. A strict commission business only will be done, and the commission is to be paid by the party selling. In addition, the company will have power to act as financial agents and brokers, and to handle a general insurance business. Offices are being opened in Winnipeg, Regina and Calgary. The aims of the company are stated in full in their own circular as follows:—

The extensive organization of the Grain Growers throughout the west will, it is understood, be utilized:—

"1. To act as agents between the buyer and seller of improved and unimproved lands in western Canada. Purchasers will be given first-hand information that is accurate and reliable on all lands submitted for consideration. Owners having land to sell must comply with conditions outlined on our listing form, copy of which will be supplied on application.

"2. To appraise and give a detailed report in full on any specific parcel or parcels of land, and full report on the district in which such land is located, using our regular appraisal forms, copies of which will be supplied you on application."

LONDON & LANCASHIRE FIRE INSURANCE COMPANY LIMITED

PUBLICATIONS RECEIVED

Report on Agriculture of the Province of New Brunswick for 1917. Outlines the production for the year, and the various activities of the department in the way of distribution of seed, etc.

How Germany Does Business.—By Dr. Paul Pensac Gourvitch, with a preface by Dr. B. E. Shatsky. This book gives a very realistic description of German methods of promoting foreign trade. By means of concrete examples, such as the shoe and the lace industries, the advantages of her organization and methods are illustrated. While the book is far from being an exhaustive treatise, there is much of value, not only to those interested in methods of trade and finance, but also to those who can profit by promoting their export business in the most efficient manner.

Published at $1 by B. W. Huebsch, 225 Fifth Avenue, New York.

What Is My Share of the Cost of the War?—Issued by the Bankers Trust Company, of New York. This booklet contains an estimate of the income of family groups in the United States, and endeavors to ascertain what fraction is available for war expenditure. The statistics are, of course, too general to be entirely accurate, but the pamphlet is none the less instructive, and, what is more important, it sets down a fairly reliable standard, or rather minimum, for individual and family savings. The cost of the war to the United States for the present year is estimated at fifteen billiens of dollars, and by means of a complete table each person may find just how much he should set aside for his share of taxation and loans.

Foreign Trade of Japan.—A booklet has been published by the Yokohama Chamber of Commerce containing a number of charts illustrating the foreign trade of Japan and of the port of Yokohama. Since the year 1915, Japan's foreign trade, particularly exports, have increased rapidly, the latter having doubled since 1915. Another remarkable thing is the proportion of trade which is carried in Japanese vessels. In 1913 it was 40 per cent., while in 1917 the proportion was about 70 per cent. The increase has been at the expense of German shipping, which formerly carried about 10 per cent., and of British shipping, the proportion of which has been reduced from about 30 per cent. to about 15 per cent. French shipping has held its own, but United States shipping has decreased largely.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the month of May:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
May 7	$3,065,000	$3,033,000	— $ 32,000
May 14	3,123,000	3,109,000	— 14,000
May 21	3,074,000	2,847,000	— 227,000
May 31	4,806,000	4,035,000	— 771,000

Grand Trunk Railway.

	1917.	1918.	Inc. or dec.
May 7	$1,135,091	$1,434,727	+ $299,636
May 14	1,356,646	1,480,903	+ 124 257
May 21	1,425,554	1,576,508	+ 150.954
May 31	1,939,312	2,065,180	+ 125.868

Canadian Northern Railway.

	1917.	1918.	Inc. or dec.
May 7	$ 734,500	$ 827,500	+ $ 93,000
May 14	882,000	857,300	— 24,700
May 21	860,400	866,300	+ 5,900
May 31	1,307,800	1,210,900	— 96,900

The following is a statement of earnings and expenses for month of April, 1918:—

	1918.	1917.	Inc. or dec.
Total gross earnings.	$ 3,958,100	$ 3,315,500	+ $ 642,600
Operating expenses .	3,416,800	2,557,600	+ 859,200
Net earnings	541,300	757,900	— 216,600
Aggregate gross earnings from July 1st.	34,657,500	33,411,400	+ 1,246,100
Aggregate net earnings from July 1st.	3,031,400	8,262,400	— 5,231,000

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Canadian Car and Foundry Company.—The net profits of the company for April, 1918, after payment of bond interest, were the largest in the history of the company, and the surplus earnings for the first seven months of the current fiscal year were over $2,000,000, exclusive of government war taxes.

Nova Scotia Steel and Coal Company.—The open hearth plant of the company produced 14,558 tons of steel ingots in May, and the blast furnaces 8,835 tons of pig iron, as against 14,243 tons of steel, and 8,016 tons of iron in March, 1917, when the best previous record was made. The net gain is 316 tons of steel and 818 tons of iron.

Southern Canada Power Company, Limited.—The gross earnings of the company for the month of April were $40,314, an increase over last year of $6,732. Operating expenses amounted to $22,538, compared with $19,458 last year. The gross earnings for the seven months ending April, 1918, were $273,253, and the operating expenses amounted to $151,013.

Anaconda Copper Mining Company.—The output of the company during May was approximately 28,400,000 pounds, an increase of nearly 2,000,000 pounds over April, and the largest total for any month since May of last year. The largest month in 1917 was March, with 31,300,000 pounds. The average production for the first five months of 1918 has been 26,300,000 pounds.

Demerara Electric Company, Limited.—The earnings of the company for April, were as follows:—

	Gross.	Net.
Railroad	$6,695.87	$ 765.02
Light and power	8,247.55	4,198.43
Miscellaneous	....	134.80
Total		$5,098.25

Trinidad Electric Company, Limited.—The earnings of the company for April, were as follows:—

	Gross.	Net.
Railroad	$10,260.94	$2,693.02
Light and power	9,904.88	3,826.54
Refrigeration	....	569.72
Total		$7,089.28

Brazilian Traction, Light and Power Company.—Gross earnings of the company for April, amounted to 8,330,000 milreis; an increase of 877,000 milreis. Operating expenses, 4,239,000 milreis; increase, 839,000 milreis. Net earnings amounted to 4,091,000 milreis; increase, 36,000 milreis. For the four months gross earnings amounted to 31,576,000 milreis, an increase of 2,436,000 milreis, and net earnings were 15,277,000 milreis, a decrease of 814,000 milreis.

East Middlesex Telephone Company.—The financial report of the company showed the total receipts to be $7,806.71, and the total expenditure $6,749.99, leaving a balance of $1,056.72. The company has 428 telephones installed, and has 130 miles of poles and wires. The following officers were elected: President, Peter Ramsay; vice-president, W. H. McCutcheon; directors, W. C. Gee, R. H. Harding, John Gourlay, James Gumb; secretary-treasurer, K. M. Whitehead.

Calgary Power Company, Limited.—The company reports gross earnings of $262,161 for 1917, against $266,982 for 1916. Operating expenses at $40,959, however, compare with $49,923 the previous year, leaving net earnings at $221,202, against $217,058 in 1916. The net profit for the year, after the payment of interest charges, was $71,121, against $65,209. From the year's surplus $35,000 was appropriated for depreciation, leaving a net balance in profit and loss account of $143,947, against $107,735 in 1916.

Dome Mines, Limited.—The annual report of the company which deals with the eight months in which the mill was operated, shows ore milled amounting to 247,000 tons, as compared with 459,530 tons in the whole of the previous year. Total earnings were $1,030,758, compared with $2,171,785, and total operating costs $686,180, as compared with $1,241,862. Net operating earnings for the eight months were $344,578, non-operating revenue $10,445, and net profit $355,023, compared with $952,449 in the year ended March 31st, 1917.

Winnipeg Electric Railway.—Gross earnings of the company for the month of March were $307,289, an increase of $14,195, but working expenses were higher by $31,175, making a decrease in net of $16,980.

For the quarter ending with March, the gross earnings of $940,830 showed an increase of $47,074. The net earnings showed a decrease of $33,817, being only $216,856 as compared with $250,673 for the corresponding period of 1917. The following is a summary of the results for March:—

March.	1918.	1917.	Inc. or dec.
Gross	$307,289	$293,094	+ $14,195
Expenses	240,628	209,453	+ 31,175
Net	66,661	83,641	— 16,980
Quarter—			
Gross	940,830	893,756	+ 47,074
Net	216,856	250,673	— 33,817

Minneapolis, St. Paul and Sault Ste. Marie Railway Company.—The following is a statement of the receipts and expenditures of the above railway for the year ended December 31st, 1917:—

	Soo Line.	Chicago Div.	System.
Gross earnings	$20,726,280	$13,814,210	$34,540,491
Operating expenses ...	14,094,769	8.870,023	22,964,793
Net earnings	$ 6,631,510	$ 4,944,187	$11,575,697
Income from other sources	1,574,468	77,763	1,652,231
Total income	$ 8,2 5,978	$ 5,021,950	$13,227,929
Fixed charges	5,459,549	3,339,941	8,799,490
Taxes, etc.	....	....	....
Surplus income	$ 2,746,429	$ 1,682,009	$ 4,428,438

Dealing with the entire system and comparing the year's results with those of the preceding year, the gross earnings increased $68,407. Net earnings decreased $3,654,794 and the surplus income decreased $3,342,619.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett. Members Toronto Stock Exchange, 103 Bay Street Toronto:—

CANADA'S FOOD REGULATIONS

The weekly editorial of the Educational Division of the Canada Food Board for May 23rd, 1918, deals with the food regulations as follows:—

Enforcement of the Canada Food Board's regulations as to food conservation has been placed in the hands of the police machinery of the municipalities and of the different provinces throughout the Dominion.

It is the duty and privilege of the provinces to enforce federal laws, and the orders of the Canada Food Board have the effect of federal law, being passed upon authority of orders issued by the Privy Council and published in the Canada Gazette. It, therefore, becomes the duty of police officers throughout the Dominion to acquaint themselves with these regulations regarding our food supply, and to see to it that they are obeyed. At this stage of the world's food situation, when 4,750,000 people in Europe have starved to death as compared to 4,250,000 soldiers who have died as the result of battle, it is beyond cavil or dispute that these food regulations are absolutely necessary. Indeed, many people in communication with friends in England or in France think our Canadian regulations mild in view of what people on the other side are undergoing. Patriotism, as well as duty, should inspire submission to these restrictions by the public and vigilant enforcement of them by the officers of the law.

In cases of convictions secured by the municipal police officers, it should be noted that where these convictions result in the imposition of fines, the money from these fines is to be paid to the municipal treasuries, and similarly in the cases where provincial officers secure convictions. The Canada Food Board has circularized these orders in official form throughout the police machinery of the various provinces, beginning with the attorneys-general and continuing through the lists of Crown attorneys and Crown prosecutors. In some provinces the chief constables have also received copies of the various orders affecting the public. As a result, throughout Canada of recent weeks there has been a crop of convictions. In all cases the magistrates have stood firmly behind the regulations and imposed the penalties as provided. These run from $100 to $1,000 in fines or imprisonment up to three months, or both. Restaurant keepers who have served meat on prohibited days and hours, served sugar on the tables or wasted food, have been brought to task, and the widespread publicity this has entailed will do a great deal more to assure conservation of food in public eating-places than anything else.

The anti-loafing law, also bearing upon our war-time food production, has likewise been enforced. Magistrates have seized the opportunity of dealing with loafers, tramps and "sports" by putting them to work on the farms. Non-essential industries have been interpreted by some magistrates into more or less definite groups, and men who had no better excuse than employment in said questionable industries have been ordered to get into more useful occupations. In Winnipeg a great change has been observed in the streets since this law went into effect. The idlers and loafers have disappeared.

MAY MUNICIPAL BOND SALES

Montreal Catholic Schools Commission Loan Fully Subscribed—Many Ontario Issues Last Month

The municipal bond sales in Canada during May totalled $4,751,142, compared with $3,968,995 in April and $1,375,039 in May a year ago. The May records of municipal bond sales at home for the past nine years are as follows:—

May.	Municipal bond sales in Canada.
1910	$5,964,896
1911	3,946,047
1912	1,928,748
1913	1,880,630
1914	6,400,755
1915	3,464,281
1916	2,649,000
1917	1,375,039
1918	4,751,142

Details of May Sales.

The following are the details of the May sales:—

Municipality.	Rate %	Term (years).	Amount.
British Columbia.

November	4,000,000	7,894,000	Nil	....
December	450,000	3,065,000	Nil	....
Totals	$35.483,114	$32,335,764	$ 6,233,365	$ 310,000

MUNICIPAL BORROWING

The minister of finance has again called the attention of municipalities in Canada to the fact that permission from the department of finance is necessary before bond issues can be made. This permission is granted only where it is clearly established that the works desired are absolutely necessary in the public interest and cannot be postponed. Many municipalities have been continuing operations on works, some of which are not indispensable, and some of which have been commenced since the beginning of the war.

MORE FUNDS FOR BRITISH BONDS

On Saturday, the first of June, dividends on British war loan stock to the amount of £50,000,000 were paid. Mr. Andrew Bonar Law, Chancellor of the Exchequer, has said that he is looking forward to the reinvestment of a very large part of this sum in National War Bonds. The system of continuous borrowing, has, he stated, been a greater success than was hoped for. It has the advantage of causing the least disturbance to the money market, and also encourages direct saving and the avoidance of unnecessary expenditure. The banks have agreed to invest in war bonds, the dividends they receive from all government stocks this week, to deal generously with customers in making advances against war bonds, and to persuade customers to invest directly in the war loan instead of piling up deposits, which have been steadily increasing.

Exempt from Dominion Tax

It is good business to increase your holdings of Victory Loan Bonds, because the security is of the highest quality, the income return attractive, and you are not required to pay Dominion Income Tax.

BUSINESS CONDITIONS IN ALBERTA

Territory Surrounding Edmonton is Engaged in Mixed Farming—Prosperity Throughout the Province

Edmonton has good reason to be satisfied with general business conditions in its tributary territory, according to Mr. F. T. Fisher, secretary of the Edmonton Board of Trade. While the great territory of central Alberta, from which Edmonton draws most of its trade, has other valuable resources, such as coal and timber, its basic industry, on the success of which all other forms of activity are dependent, is farming in its various forms. And the central Alberta farmers are eminently prosperous, Mr. Fisher told the representative of *The Monetary Times*. Not only have they been receiving the very high prices for all products of the farm, such as have been enjoyed by farmers everywhere, but conditions of production have been uniformly favorable. Dry seasons are unknown in the Edmonton country and even in those years when the crops partially failed and feed was scarce in some sections of the western provinces and states, good yields of grain and other crops and unlimited supplies of feed for livestock were produced on central Alberta farms.

Taking it on the average, year in and year out, said Mr. Fisher, the farmer in the Edmonton country probably produces his beef, pork and milk at lower cost than any other farmer on this continent. This is true as regards the cost of operation, when the big capital investment, entailed by the very high prices of land in those portions of the continent at all comparable with central Alberta for the purpose of mixed farming is taken into consideration, the relatively low cost of production on the Edmonton district farms is greatly accentuated. Notwithstanding this lower cost of production, the central Alberta farmer enjoys quite as good markets as his fellow on $300-an-acre land in Illinois or Wisconsin, or as in the dairy districts of Ontario. Hogs, one of the most important products of the farm, have for a long time been quoted noticeably higher on the Edmonton stockyards than in Chicago.

Many Improvements on Farms.

Evidences of prosperity are obvious to the most casual observer driving through the farming settlements in the more developed portions of Central Alberta. Everywhere comfortable modern homes, in many instances equipped with electric lighting and modern plumbing, demonstrate that the farmers feel that they have reached a stage at which they can afford to make themselves comfortable. That they also fully appreciate the economic advantage of the most modern equipment and labor-saving devices, as a means of economizing man power, and are in a position to make such knowledge effective, is evidenced by the frequency with which one sees fine new dairy barns with the most modern fittings, tractors to permit of rapid work at rush times, and the time saving automobile. And they are not going into debt for these conveniences. One of the large agricultural implement concerns in Edmonton recently told the writer that of a supply of 30 big tractors sent out to one country point, 28 were sold for spot cash. Another encouraging sign is that the farmers are spending money to improve their livestock.

The prosperity of the farmers has resulted in very satisfactory business conditions in the country towns and villages; and this in turn is reflected in the activity of the distributing houses and factories in Edmonton with which the country merchants do business. Almost any wholesale house in Edmonton will tell you, not only that it is now doing the heaviest volume of business that it has ever done, but also that it is carrying a smaller percentage of its business on its books than ever before. To illustrate the effect of this agricultural prosperity, Mr. Fisher referred to a statement recently made by the head of one Edmonton wholesale house. This house handles only certain lines of goods absolutely dependent on the building trades. Edmonton, like other western cities, is at present devoid of building activity. Yet this house is doing the biggest volume of trade in its history—not excepting the height of the boom, when Edmonton's building permits aggregated over $14,000,000 in one year. The explanation of this seeming paradox is, of course, that the goods are now going out to the country merchants for sale to farmers for their new houses, barns and granaries.

"Edmonton's business now rests upon the soundest foundation at any time in our history," said Mr. Fisher. "We are now depending solely on the return from what our territory is actually producing, and not to any appreciable extent upon the expenditure of borrowed money. And, allowing for some variation, this agricultural prosperity will be maintained indefinitely. No; a slump in the price of wheat will not cause any serious depression. Our farmers are not dependent to any serious extent on the success of their wheat crops. They are all raising cattle and hogs and many of them are dairying. Do you know that Edmonton is one of the most important butter producing centres in Canada, and that the value of our creamery output is only second to that of our meat packing plants? The butter output of Edmonton creameries in 1917 was approximately three-and-a-half million pounds and 400,000 pounds of cheese and the output doubles up every two or three years. Those who know much more about it than I do, tell me that the Edmonton district is one of the best dairy countries in the world and that milk and cream, and consequently cheese and butter, can be produced here more cheaply than in any other part of Canada or the United States. It is an easy matter for our farmers to reduce their acreage of wheat and increase their output of beef, pork and milk, should this seem advisable."

Asked about coal, Mr. Fisher said: "I wonder how many readers of *The Monetary Times* know that one-seventh of the known coal supply of the world lies in the province of Alberta. Yet such is the case; and much the greater part of that enormous supply lies in what is distinctively Edmonton territory."

There is apparently great room for development in the coal industry in the Edmonton field. The entire production of the Alberta mines in 1917 was rather less than 5,000,000 tons, of which less than 1,000,000 tons came from the lignite mines around Edmonton. That production can be increased almost indefinitely as the market develops. It will also probably be news to many of our readers that to the west of Edmonton, in territory served by the Grand Trunk Pacific and its Alberta coal branch, is a great field of high-grade bituminous coal which will compare favorably with the best steam coal from Pennsylvania. There are now operating in that district four strong concerns with their headquarters in Edmonton.

BURNABY BUYS MUNICIPAL BONDS

Another large issue of Burnaby bonds of early date has been acquired by the municipality for investment in the sinking funds. These have been purchased on the average earning basis of 7 per cent., which is an important benefit to the corporation, as the sinking fund has been computed on a 4 per cent. basis. If this policy be continued, it may be possible to suspend the sinking funds affected by reason of the earlier accumulation of funds sufficient to provide for amortization of the issues at maturity by reason of the greater interest earning power.

Another important feature of these from-time-to-time purchases of their own debentures is the fact that at maturity these purchased bonds will be in possession of the corporation, and all that will be necessary to wind up the issue and clear that portion of the bonded indebtedness from the municipality will be the application of the cancellation stamp.

The debentures purchased have been paid for out of the sinking fund authorized by the by-law under which they were issued and are deposited to the credit of that particular sinking fund. Some of these flotations bear 4½ per cent. on the 1911 issue, and others are 6 per cent. serials.

By this system of acquiring the debentures of the municipality on a war market basis, Burnaby is gradually reducing the bonded indebtedness of the corporation while the system of serial bond principal reduction lends itself to this ultimate end. Burnaby has reduced the debt of the corporation $779,000, and, as the serial debenture payments are made according to the schedule, the first five years will average a reduction in the debt of about $35,000 per annum, the next five years will average $45,000 per annum, and each five years subsequent will average a reduction so that by 1936 the bonded debt can be reduced by the total of the serial bond issue, namely, $1,000,000.

The interest decreases each year as the principal is paid off, and the money so saved is utilized to increase the reduction in the principal. By this system the debt is automatically decreased each year by the amount of the series maturing.

If the same system of careful financing be continued until the maturity of serial bond issue and the sinking funds and interest taken care of in the manner now in vogue, the debt of Burnaby municipality at the time of that maturity, instead of $3,003,150, will be $1,103,500. This amount may even be considered better by the corporation taking advantage of the markets from time to time and buying in more of the municipal bonds.

MAY FIRE LOSSES

Destruction of Shipyards of J. B. Coughlin and Sons Added $1,200,000 to Total Losses

The Monetary Times' estimate of Canada's fire loss during May, 1918, is $3,570,014, compared with the April loss of $3,240,187, and $1,163,110 for May, 1917. The following is the estimate of the May losses:—

Fires exceeding $10,000	$2,976,392
Small fires reported	120,257
Estimate for unreported fires	473,365
Total	$3,570,014

The Monetary Times' record of the past three years and this year to date, shows the following monthly losses:—

	1915.	1916.	1917.	1918.
January	$ 1,249,886	$ 1,649,217	$ 1,918,660	$ 2,688,556
February ...	1,019,556	3,275,600	2,009,953	2,243,762
March	1,632,696	1,406,501	2,050,650	1,682,286
April	1,463,747	1,460,437	1,317,714	3,240,187
May	881,855	1,850,205	1,163,110	3,570,014
June	1,157,156	494,557	1,184,627	....
July	773,269	3,039,634	1,101,734	....
August	403,693	1,057,109	1,230,183	....
September ..	1,116,109	981,703	1,301,700	....
October	1,290,325	1,077,815	704,605	....
November ...	1,087,980	923,235	959,049	....
December ...	1,595,255	3,271,496	5,144,100	....
Totals ..	$13,671,527	$20,487,509	$20,086,085	$13,424,805

The fires reported in May, at which the losses amounted to $10,000 and over were:—

Medicine Hat, Alta., May 2, rolling mills, $45,000.

Sault Ste. Marie, Ont., May 2, old power plant of the Great Lakes Power Company, $147,000.

Three Rivers, Que., May 3, Victoria Theatre and adjoining buildings, $150,000.

Montreal E., Que., May 4, plant of the Munitions and Metals Products Company, Limited, $20,000.

Port Stanley, Ont., May 5, section of village, $12,392.

St. Catharines, Ont., May 8, Ridley College skating rink, $12,000.

Brandon, Man., May 9, Strand building, $25,000.

Toronto, Ont., May 9, main building of the Royal Canadian Yacht Club, $60,000.

Quebec, Que., May 11, plant of Victoriaville foundry, $15,000.

St. Roch, Que., May 11, shoe establishment of Louis Beaubien Company, $50,000.

Levis, Que., May 14, Levis Laundry, $20,000.

Steveston, B.C., May 14, Steveston canneries and many other buildings, $400,000.

Entwistle, Alta., May 14, principal portion of the business section of the town, $40,000.

False Creek, B.C., May 15, shipyards of J. Coughlin and Sons, $1,200,000.

Winnipeg, Man., May 15, business building on Main Street, $145,000.

Winnipeg, Man., May 15, business building, occupied by Richardson and Bishop, $150,000.

Sebringville, Ont., May 17, frame mill of the Sebringville Flax Company, $25,000.

South Vancouver, B.C., May 17, kilns and yards of the Ontario Lumber Company, $15,000.

Brilliant, B.C., May 18, Doukhobors' planing mill and pipe factory, $20,000.

Komoka, Ont., May 19—Thames Valley cheese and butter factory, $10,000.

North Burnaby, B.C., May 19, shingle mill of Pearson and Company, $50,000.

Carieville, Sask., May 20, livery stable of Muldoon Brothers, $75,000.

Arnprior, Ont., May 21, lumber yards of Lachlin Brothers, $75,000.

Fort William, Ont., May 23, plant of the Canadian Car and Foundry Company, $15,000.

Montreal, Que., May 24, George Hall coal yards, $100,000.

Pembroke, Ont., May 25, plant of the Union Box and Shook Mills, Limited, $40,000.

Niagara Falls, Ont., May 31, Grand Trunk yards, $60,000.

Among the structures damaged or destroyed last month were: Barns, 11; lumber yards, 3; church, 1; residences, 14; livery, 1; stores, 11; warehouses, 3; office, 1; business blocks, 9; business buildings, 9; factories, 3; blacksmith's shop, 1; farm building, 1; pumphouse, 1; mills, 2; schoolhouse, 1; flaxmill, 1; granary, 1; bus livery, 1; power house, 1; hospitals, 2; shipyard, 1; lighthouse, 1; chicken house, 1; laundry, 1; vacant houses, 2; plants, 6; railroad car, 1; club building, 1; stable, 1; bakery, 1; oil tank, 1; lumber camp, 1; skating rink, 1; garages, 2; planing mills, 2; tenements, 2; shingle mill, 1; coal yard, 1; automobile, 1; frame elevator, 1; storehouse, 1; sheds, 2.

Among the causes last month were: Incendiarism, 4; spontaneous combustion, 3; struck by lightning, 3; mice gnawing matches, 1; defective wiring, 1; explosion of acetylene light, 1; spark from machine igniting inflammable material nearby, 1; defective incubator, 1; overheated stove, 1; defective heater, 1.

Total of Fatalities Low.

The following is a list of fires at which fatalities occurred last month:—

Port Sydney, Ont., May 3 ..	Trapped in burning house ..	2
Toronto, Ont., May 10	Fire from gas stove	1
Three Rivers, Que., May 13	Trapped in burning house ..	3
Edmonton, Alta., May 17 ..	Explosion of gunpowder ...	2
Neepawa, Man., May 19 ...	Trapped in burning house ..	1
Montreal, Que., May 30	Trapped in burning house ..	1
	Total	10

The following table, compiled by *The Monetary Times*, shows deaths caused by fire during May, 1918, as compared with previous returns:—

	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.

BRITISH CROWN ASSURANCE COMPANY

The eleventh annual meeting of the British Crown Assurance Company, Limited, was held in London, England, on May 10th, 1918. In addressing the shareholders, the Rt. Hon. J. Parker Smith, chairman of the company, remarked that while business in all departments at home had been maintained at about a level, considerable expansion had taken place in Canada. The Canadian manager, Mr. J. H. Riddel, and the assistant manager, Mr. E. C. G. Johnson, have been promoting the company's interests very successfully here, and have succeeded in increasing the business extensively.

Premiums for the year amounted to $490,190, and the total revenue was $511,558. The losses amounted to $203,454, and a balance of $126,550 was carried forward. This compares with a balance last year of $7,629. The assets consist principally of British and Canadian government securities, municipal debentures and foreign and Indian government securities. Considerable sums are also invested in British and foreign railway securities.

Up until the year 1917 the company's business was operated in Canada under provincial licenses only, but they have now secured a Dominion license. The loss ratio in the fire insurance department for the year was 41.5 per cent., which is 15 per cent. less than the previous year. A small marine business is also done, but in this department the losses were larger than the premiums. The chairman explained that this was probably owing to the fact that the smallness of the business done prevented a good average. The accident department has shown an improvement during the past few years, and has now become a profitable part of the business. A dividend of 5 per cent. per annum was authorized.

ALBERTA INSURANCE ACT AMENDMENTS

Many Regulations for the Protection of the Insuring Company—Legal Investments for Funds

An act was passed in the Alberta Legislature and assented to on April 13th, 1918, introducing important amendments in the Alberta Insurance Act of 1915.

Regarding hail insurance, it is laid down that the liability of the company shall commence at noon on the day on which the application is accepted, and shall expire at noon on September 15th. Should the crop insured be cut before the date of expiring, the liability of the company shall cease. If an application for insurance is declined, it must be within 48 hours of the receipt of the application, by a registered letter to the applicant. Every agent who takes an application for hail insurance must forward it by registered mail not later than the day following.

A number of amendments have also been introduced for the protection of the company. A misstatement on the part of the insurer regarding the location and acreage, renders the policy void. All understandings must be in writing. Companies are not to be liable for losses which amount to less than 5 per cent. of the insurance per acre. When for loss occasioned by causes other than hail, and where other causes have contributed to the damage, the company shall be liable only for so much of the loss as is directly attributable to hail. The company is also not responsible for loss arising from the neglect of the assured to cut, after it has been damaged by hail, any portion of the insured crop which is fully matured. Any fraud or false statement in a statutory declaration of a claimant shall vitiate the claim. Where the loss is payable to a third party, proof must be made by the assured. In case of a disagreement as to the percentage of damage by hail to any of the crop insured, such percentage shall, when so required by either party, be ascertained by an appraisal. The loss shall be payable within 60 days after completion of proof, unless a shorter period is provided for by the contract of insurance.

Incorporation of Insurance Companies.

Every special act of the legislature passed after the first day of January, 1918, for the incorporation of an insurance company, shall be in the form of a schedule prescribed in the act.. The persons named in the special act are to be the provisional directors of the company, and to remain in office until they are replaced by directors duly elected in their stead. The directors may establish local advisory boards or agents within Alberta or elsewhere. The capital stock is to be divided into shares of $100 each. After the whole authorized capital stock has been subscribed, and 50 per cent. paid in cash, directors may increase the stock from time to time within the limit named in the special act. Increases must, however, be approved by the holders of two-thirds of the shares.

As soon as the amount of stock has been subscribed, and 10 per cent. has been paid into some chartered bank in Alberta, the provisional directors shall call a general meeting of the shareholders, and the directors are to be elected. The first instalment of stock is not to exceed 25 per cent., and no subsequent instalment shall exceed 10 per cent. A meeting of the company must be called once a year, and a statement of the affairs of the company submitted. The company may reinsure business carried by any other company, and may also reinsure its own business in another company.

In the case of life insurance companies, there are to be two classes of directors—namely, shareholders' directors and policy-holders' directors. In the case of other companies, of course, there is only one class, known as ordinary directors. Shareholders' directors of a life company or any ordinary director of any other company must hold at least $2,500 of stock. Provisions are laid down also regarding the term of office, the manner of election, the duties and powers, etc. Shareholders are liable for the amount of stock for which they have subscribed but not paid, and this is the maximum for which they can be held liable.

Another important provision is that if the directors declare and pay any dividend when the company is insolvent, or any dividend the payment of which renders the company insolvent or diminishes the capital stock thereof, they shall be jointly and severally liable. Any director, however, who publishes a protest against such a declaration, may escape liability.

The surplus insurance funds and the reserve funds of a provincial insurance company may be loaned or invested as follows:—

(1) In any securities in which under the trustee ordinance, trustees may invest trust funds

(2) In first mortgages on improved farm lands in Canada, up to 60 per cent. of their cash value, provided that the total amount so invested shall not exceed 20 per cent. of the total amount of funds invested by the company.

(3) In debentures of any municipal or school corporation in Canada.

(4) Upon certain conditions in permanent debentures of railways, telegraph, telephone, or other public utility companies.

(5) In securities of foreign governments, or states, or cities, where the company undertakes to do business, or in securities guaranteed by such governments or municipalities.

(6) In the case of a life company, in policies of other companies.

CROP SEEDING IS WELL ADVANCED

Except in a very few cases, permanent damage to the growing grain from frost or cold weather is not indicated in the weekly detailed report from agents along its lines in Manitoba, Saskatchewan and Alberta received at the offices of the Canadian Northern here a few days ago.

More than half of those reporting show growth has been retarded by unfavorable weather, but the general belief expressed is that, with warm, sunny days, the grain will rapidly recover the ground lost.

Moreover, the seeding this season is conceded to be three weeks in advance of last year. So, relatively, the crop in western Canada along the lines of the Canadian Northern, even with the setback reported, ought to be in advance of last season. In only four cases is need of rain indicated. Showers and snowfalls have furnished plenty of moisture.

DEVELOPMENT OF ST. LAWRENCE POWERS

"Within a very few years there will be a demand for every horse-power that can be developed on the St. Lawrence River to which Canada is entitled for use upon the Canadian side," states Sir Clifford Sifton in the ninth annual report of the Commission of Conservation, which has just been issued. "The situation with regard to Niagara will undoubtedly be duplicated," declares Sir Clifford, "and if we are foolish enough to allow vested interests to be created on the other side of the line, we shall inevitably find ourselves handicapped and embarrassed as we now are with respect to Niagara power." He contends that a thorough study of the situation reveals that there is only one sound method of developing these powers, viz., under "an international commission, under which the best use of the powers will be made, the most economical development effected, and a just and equitable division of the power will take place for the benefit of the people who are directly concerned in its use."

Special prominence is laid in the report on power and fuel problems. Following a comprehensive review of the progress of conservation in 1917 by Sir Clifford Sifton are addresses on "Peat as a Source of Fuel" by Dr. Eugene Haanel, "The Fuel Situation in Canada" by Fuel Controller C. A. Magrath, "Power Possibilities on the St. Lawrence" by A. V. White, "The Niagara Power Situation" by the same author, and a comprehensive treatment of the subject of railway electrification by S. T. Dodd, of the General Electric Company, and W. F. Tye, C.E. The results of the scientific investigations of the commission to find out how best to regenerate the immense areas of cut-over pulpwood lands in eastern Canada are also given. Dr. C. Gordon Hewitt deals with the "Conservation of Wild Life in Canada," and Mr. J. P. Babcock with the "Salmon Fishery of the Fraser River District." In addition, a full account of the work accomplished by the commission during the year in regard to water-powers, town-planning, mining, agriculture and game conservation is given. An interesting feature is a chart showing how the German metal-buying combination controlled the metal markets of the world before the war.

DIVIDENDS AND NOTICES

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of two per cent. (2%) on the Common Stock of the **Dominion Textile Company, Limited,** has been declared for the quarter ending **30th June, 1918,** payable **July 2nd,** to shareholders of record **June 15th, 1918.**

By Order of the Board.
JAS. H. WEBB,
Secretary-Treasurer.
Montreal, 10th May, 1918.

CANADIAN CAR & FOUNDRY COMPANY, LIMITED, MONTREAL

Notice is hereby given that a dividend of Three and One-Half per Cent. upon the accrued dividends on the preference stock of the Company has been declared, payable on July 15th, 1918, to shareholders of record at the close of business June 15th, 1918. Interest at rate of seven and one-half per cent., and payable semi-annually at Imperial Bank of Canada, Red Deer, Toronto and Montreal, Bank of the Manhattan Company, New York.

A. T. STEPHENSON,
City Commissioner.
Red Deer, Alta., May 28, 1918.

BANKS TO FINANCE DOMINION TEMPORARILY

As the funds of the Canadian government will be exhausted about the end of July, and the next war loan will not be floated until probably three months thereafter, there will be an interval of some months during which temporary financing will be required. On Thursday, the 6th inst., Sir Thomas White was in conference with representatives of the Canadian Bankers' Association, and it is understood that arrangements were discussed for the financing during this period to be carried by the banks.

NEW PULP AND LUMBER MILL

A company, known as the Beaver Cove Lumber Company, Limited, has commenced the construction of a large pulp and lumber mill at Beaver Cove, B.C., 165 miles north of Vancouver. It is understood about $3,000,000 or $4,000,000 will be invested, and the daily capacity of the plant will be 40 tons of pulp and 100,000 feet of lumber. The company has timber resources totalling five billion feet, and the cost has been over $2,000,000. The property includes some fine spruce, which it is the intention to cut as soon as possible for use in aeroplane construction.

NEW INCORPORATIONS

The Kirkland-Munroe Gold Mines, Limited, With Capital Stock of $2,000,000, Received Charter

The largest company incorporated during the past week was the Kirkland-Munroe Gold Mines, Limited, with a capital stock of $2,000,000, and head office at Toronto, Ont. The Adanac Collieries, Limited, with capital stock of $1,500,000, and head office at Winnipeg, Man., received charter.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Kelowna, B.C.—Archie Johnson, Limited, $10,000.

Sandon, B.C.—Silversmith Mines, Limited, $750,000.

Kamloops, B.C.—Mountain Sawmills, Limited, $50,000.

Grindrod, B.C.—Grindrod Farmers' Hall, Limited, $2,000.

Montreal E., Que.—Club Montreal-Est., Limitée, $5,000; J. Dublong, H. Drolet.

St. Hyacinthe, Que.—Club Corona, Limitée, $10,000; D. Bouchard, J. Bissonette.

Sarnia, Ont.—Indian Farm Lands, Limited, $25,000; W. H. Kenny, W. E. Beresford.

Nanaimo, B.C.—Vancouver Island Fish and Cold Storage Company, Limited, $20,000.

Galt, Ont.—Glennie and Moore, Limited, $40,000; W. M. O. Lochead, W. P. Clement.

Walkerville, Ont.—Belle River Oil Company, Limited, $40,000; W. E. Jones, G. Reid.

Kenton, Man.—Kenton Oil Company, Limited, $20,000; W. Hudson, J. Ellis, G. A. Kent.

Atlee, Alta.—Atlee Ranching Company, Limited, $100,000; C. M. Wright, W. D. Spence.

Hamilton, Ont.—Motor-Boat-Controls, Limited, $50,000; E. T. Emerson, J. Sinclair, E. Wilson.

Verdun, Que.—A. V. Fiola and Company, Limited, $45,000; C. Laurin, A. V. Fiola, E. Laurin.

Waskada, Man.—Waskada Rural Credit Society, $20,000; A. Hibbert, F. Thompson, J. D. Williams.

Welland, Ont.—Dim-Rite Specialties, Limited, $60,000; W. H. Honsberger, G. C. Brown, J. C. Diffin.

Letellier, Man.—E. Graveline and Company, Limited, $20,000; J. Saurette, C. Barnabe, E. Graveline.

Sault Ste. Marie, Ont.—Canadian Coal Company, Limited, $40,000; H. J. Herrold, E. P. Foster, W. J. Edwards.

Victoria, B.C.—National Motor Company, Limited, $10,000. Fred. Foster Furrier, Limited, $20,000. Haddington Quarry Company, Limited, $10,000.

Calgary, Alta.—Branham Dredging Company, Limited, $500,000; W. W. Wadleigh, A. C. Galbraith, C. Saunders. United Grain Growers Securities Company, Limited, $100,000; C. Rice-Jones, R. A. Parker, C. M. Elliot.

Brantford, Ont.—Brantford Sales, Limited, $100,000; G. Brereton, W. T. Henderson, C. H. Brown. Canada Plaster Board Company, Limited, $100,000; F. Chalcraft, W. E. Long, R. E. Haire. Lansdowne Park Company, Limited, $250,000; W. P. Kellett. W. K. Thompson, W. D. Powell.

Winnipeg, Man.—Vorold Publishing Company, Limited, $1,000; A. Johnson, G. Johannson. Hecla Press Company, Limited, $20,000; A. Johnson, G. Johannson. Campbell Realty Company, Limited, $40,000; R. W. Craig, J. C. W. Agnew, G. A. Paulson. Adanac Collieries, Limited, $1,250,000.

Vancouver, B.C.—North Wellington Collieries, Limited, $25,000. Spartan Oil Company, Limited, $250,000. Esplanade Pavilion, Limited, $25,000. Point Hydraulic Mining Company, Limited, $25,000. Harold D. Carey, Limited, $10,000. Lockport Canning Company, Limited, $50,000. Delia Mines, Limited, $25,000. Cunningham Drug Stores, Limited, $10,000. Central Drug Store, Limited, $10,000. Seymour Tire and Rubber Company, Limited, $10,000. Terminal City Coal Company, Limited, $10,000. Sentry Manufacturing Company, Limited, $10,000.

Toronto, Ont.—Statesman Publishing Company, Limited, $40,000; C. J. McLaughlin, E. E. Purvis. Canadian Bee Supply and Honey Company, Limited, $40,000, W. Douglas, J. Callaghan, C. Johnston. Federal Cold Storage and Warehousing Company, Limited, $100,000; F. C. Carter, M. H. Gillam, C. H. Hewgill. Hastings Land Company, Limited, $40,000; A. W. Holmstead, J. L. Ross. King Construction Company, Limited, $100,000; J. A. Hart, J. W. Gooch, E. G. Long. Kirkland-Munroe Gold Mines, Limited, $2,000,000; A. Gordon, S. C. Parker, D. Sherriff.

Montreal, Que.—Cluett, Peabody and Company, Limited, $1,500,000; H. J. Elliott, F. W. Stewart, L. A. David. Ryan's Dry Cleaning Works, Limited, $25,000; S. Ryan, H. Sabloff, S. Myers. Union Engine Machine Works, Limited, $150,000; G. L. Williams, J. Burge, P. J. Kenny. Bessette and Ashby, Limited, $10,000; F. Callaghan, Francois-Xavier Biron. Holland's, Limited, $99,000; H. Mackay, E. G. Place. Star Coal and Feed Company, Limited; M. M. L. Masson, Joseph-Emile Billette. La Compagnie Nationale d'Aqueduc et Pouvoir, $20,000; L. P. Dupre, A. LeMoyne. Abitibi Fish Company, Limited, $30,000; F. G. Bush, G. Drennan.

STANDARDIZED AND FABRICATED SHIPS

Following upon the government control of the shipbuilding industry in England, the adoption of the standard ship soon followed on account of the economy of construction. The ships, however, were turned out entirely in individual yards, so that inland plants could not be used in their construction. Many of these exist in England, which were formerly engaged on bridge building and similar work. In order to enlist these plants in the shipbuilding industry, a system of fabrication has been adopted, that is, certain parts are sent to other shops or yards to be manufactured, and the final assembling takes place in the shipyard. This will enable individual plants to be entirely devoted to the class of work for which they are most suited.

LOANING SITUATION IN EDMONTON DISTRICT

"The loaning situation of central and northern Alberta, in so far as farm lands are concerned," said Mr. F. A. Beddard, manager of the Huron and Erie Mortgage Corporation (Edmonton branch), to *The Monetary Times*, "shows an improvement during the first five months of the present year over the corresponding period of last year, the principal feature being financial assistance to purchase more farm lands, the farmer thereby adding to his present holdings. In addition thereto, the substantial buildings being erected are very noticeable during one's travels throughout country districts, and the automobile also plays an important part, both in business and social life, amongst the farmers. Generally speaking, the farm loans are in good shape, the high prices now being obtained for all kinds of farm produce being accountable for this.

"The largest sale of farm lands has been recorded this year for many years past, and at greatly increased prices. The undoubtedly high prices of grain and stock, together with the Empire's call for more production, was instrumental in bringing this about. At the same time, in my opinion, it is very questionable whether these high prices in many cases were warranted, especially having in view that at the close of the present European conflict the reaction that will set in, must affect farm produce prices, which automatically will affect land values, but financial institutions who are loaning on this class of security must govern themselves accordingly.

"An increase in crop production of about 40 per cent. over 1917 is estimated for Alberta. Hog and sheep-raising are being given more attention than for many years past, and the natural advantages for agricultural developments, especially mixed farming, is ideal in every way, the province in this respect having no rival in the Dominion.

"A period of prosperity has existed amongst the farming communities for the past three years, and with every prospect that this will continue, at least for the present year, and with the increased immigration of farmers from the States, the prospects of the future for this province are exceedingly bright."

The weather throughout Ontario is reported to be good for fruit-growing, and it is anticipated that the crop will be considerably better than last year. In Quebec and the maritime provinces the prospects are not very favorable.

CHAS. WILLOUGHBY, President.

AMERICAN BANKERS' ASSOCIATION IS GROWING

On May 28th, 1918, the American Bankers' Association had a membership of 18,189 members, or almost double the membership in 1908. As there are nearly 30,000 banks in the United States, the association has great possibilities for further expansion, and a goal of 20,000 has been set for September next.

NEW INDUSTRY FOR HALIFAX

A company, to be known as the "Halifax Shipbuilders, Limited," has secured a site in Halifax, and will engage in steel shipbuilding. The principal promoters of the enterprise are James Carruthers and J. W. Norcross, of the Canada Steamship Lines, and R. S. Wolvin, head of the Montreal Transportation Company. They have secured the old site of the Atlantic Sugar Refineries on the Halifax side of the channel. It is expected that the initial expenditure will be between $3,000,000 and $4,000,000, and that the industry will employ over 3,000 men. The city council has decided to grant tax exemption to the syndicate. The only assistance that the government is giving is the promise of a limited number of contracts at fixed prices for the construction of modern steel freighters of about 10,000 tons capacity.

LABOR FOR THE HARVEST

Mr. J. D. McGregor, director of labor, Canada Food Board, says that the seeding of the west has been managed very well by the co-operation of the men in the towns and cities, of the boys enlisted in the Soldiers of the Soil, and by men secured from the United States.

"I have the assurance of the government," said Mr. McGregor, "that measures will be adopted to assure you the necessary supply of labor for harvesting the crop. The anti-loafing law has worked wonders, and idle foreigners and sports have disappeared from the streets of the west. They are at work on the farm."

SOLDIERS OF THE SOIL

Boys enrolled as farm helpers in the Soldiers of the Soil organization, under the auspices of the Canada Food Board, are doing good work with the seeding. In Ontario, 15,000 boys have been enrolled. Many of them are now on the land; In Manitoba over 1,000 are at work; in Saskatchewan 1,100 are placed; in Alberta, 624; in British Columbia, 540; in Nova Scotia, 1,398; in Quebec, over 1,000 have been already enrolled. New Brunswick and Prince Edward Island are still to be heard from, but the enrolment is under way.

ARRANGEMENT WITH THE UNITED STATES

Hon. G. C. Robertson, labor representative in the government, stated in the House of Commons that an arrangement had been completed by the United States Department of Labor and the Canadian Department of Immigration and Colonization for the interchange of farm laborers. Several thousand have already entered the Canadian west under this arrangement.

SOLDIERS PRODUCING FOOD

The food shortage is recognized as so serious in Europe that the soldiers are cultivating 50,000 acres between the lines in France, 7,000 in Salonica, and approximately 700,000 in Mesopotamia, Egypt, Palestine and Cyprus. In Egypt, Palestine and Salonica the British armies will this year grow all their own vegetables and a large part of their hay and forage. All the military camps in England are being cultivated also. At Aldershot, where 28 acres were being cultivated eighteen months ago, 1,200 acres are now under cultivation.

It is estimated by a parliamentary committee that 50,000 men will be needed for the harvest in Canada from August 1st to September 1st.

LUXURIES IN WAR TIME

Reduction in Imports of Wearing Apparel, But Not in Table Luxuries

BY J. L. PAYNE.

The total imports of the Dominion rose from $675,517,045 in 1913 to $974,801,020 in 1918. Part of the increment is, of course, accounted for by higher values. It would naturally be assumed that under the stress and pinch of war conditions the aggregate for 1918 would contain a much smaller proportion of luxuries than did the total for a year of abounding and normal prosperity, like 1913. It did. On the whole there was a decline in imports of many non-essentials. For example, taking a few typical classes of merchandise, almost at random, a comparison of 1913 with 1917—the last fiscal year for which details are available—gives the following result:—

	1913.	1917.
Spirits	$5,750,068	$3,599,585
Wines	908,073	453,047
" sparkling	924,960	88,230
Furs	2,166,867	974,603
Candies	1,549,867	388,307
Diamonds	3,846,350	1,430,401
Jewelry	2,152,659	866,537
Feathers, etc.	1,495,930	686,321
Silk goods	8,134,605	4,016,282

These are indicative of a fairly wide range of articles, as to which it might be said the difficulty of procuring supplies had perhaps as much to do with the actual reductions as any general disposition to economize. There were in 1917 many obstacles to bringing in certain classes of imports, irrespective of price or anything else. On coming to another class of luxuries, however, the official figures tell quite another story. Here are a few instances:—

	1913.	1917.
Phonographs and records	$723,652	$1,731,380
Automobiles and parts	10,517,787	15,782,642
Fruits and nuts	8,744,064	10,192,331
Green fruits	6,829,359	7,636,383
Vegetables	423,915	647,122

It would appear that the people of Canada were willing to do with less of the things which are worn, or used wholly for decorative purposes; but when it came to table luxuries they were not ready to stint themselves. The green fruits, for instance, consisted of bananas, lemons, oranges and pineapples, and of these they consumed considerably more in 1917 than in 1913. The vegetables in the foregoing statement were first tomatoes and melons, the former coming in from the Southern States in the spring months before the Canadian crop was marketable. Of this luxury $489,909 worth were imported last year, as compared with $309,973 worth in the year prior to the war. The same spirit was in some degree manifested in respect of magazines, the value of which increased from $1,138,867 in 1913 to $1,505,586 in 1917. In short, where appetite was concerned there appeared to be a determination to disregard the call for retrenchment. Saving was limited almost wholly to the things which are worn or used for mere adornment.

The item of automobiles calls for emphasis. It does not represent the total expenditure of the people under that head. Far from it. There is a wide difference between the import price and the retail price, and to the latter sum must be added the cost of all the automobiles manufactured within the Dominion. Probably the final bill would reach $50,000,000 for the year 1917, and in considering that relatively large figure some significance attaches to the authentic statement recently made that 80 per cent. of the sales last year were made to farmers. Considered, however, merely as a factor in our total imports, we see the suggestion of prosperity and changing conditions in the striking fact that thirty years ago there was not a single item in our aggregate purchases abroad which came anywhere near the import cost of automobiles in 1917. That outlay was larger than the combined imports of all woolens and cottons in 1887. It was, in fact, equal to our total for iron and steel, both raw and manufactured.

There is, of course, a reason for the large consumption of luxuries to which allusion has been made. Despite the disturbance produced by the war, and the creation of conditions which were quite abnormal, it must not be forgotten that money was plentiful and widely distributed. Perhaps at no period in the history of the Dominion has the demand for labor been so active nor the rate of remuneration so high. While prices have been beyond precedent, the situation in that regard has, on the whole, been counterbalanced by larger earning power and special opportunities for the making of money. The people have met the enormous calls of the war in a spirit of cheerfulness, and, as the trade records show, have been able to treat themselves to a more liberal allowance of luxuries than ever before. But there are stern and trying days ahead, when all this inflation will be followed, as is inevitable, by the disturbance which must accompany efforts to adjust all our living conditions to peace. Simple prudence demands timely preparation for such a vital event.

NEW BRUNSWICK RAILWAYS PASS TO PUBLIC

Four small railways in New Brunswick passed to government ownership on June 1st. They were built some years ago, when railways were cheap. The amounts voted for the roads were: The Elgin and Havelock, $30,000; York and Carleton, $18,000; Moncton and Buctouche, $70,000; and the St. Martin's Railway, $75,000. The Salisbury and Albert Line, for which $75,000 was voted, will be acquired on July 1st, while negotiations have yet to be completed for the purchase of the Kent, Northern and Caraquet and Gulf Shore roads, for which $60,000 and $200,000, respectively, were appropriated recently.

BRITISH COLUMBIA ELECTRIC RAILWAY

The agreement between the British Columbia Electric Railway and its employees will expire on June 30th next, and new arrangements regarding wages will have to be made. The men employed in the street railway department of the company have served notice of a demand for increased wages, amounting to 50 per cent. in some cases of the existing wage schedule, and will involve an increased pay-roll of $640,000 per annum. The company is willing to concede a 10 per cent. increase or leave the matter for submission to arbitration proceedings.

THE UNITED STATES RAILWAY SYSTEM

Messrs. Spencer, Trask and Company, of New York, in their monthly market letter of May 31st, discuss the extension of government control, and refer especially to the railroads, as follows:—

"The measures taken, though distasteful at first, certainly appear wise especially so in the case of the railroads, as full responsibility of management is now clearly up to the government, and any failure to obtain results lies with the director-general of the railroads, and cannot be laid to antagonism on the part of private interests. The railroad industry seems, as a matter of fact, to be engaging a large art of the attention of Secretary McAdoo. Within the last weeks he has authorized the roads to make plans for ding this year nearly $1,000,000,000 on additions to pro- and equipment urgently needed, and is also allowing ase in freight rates of 25 per cent. and passenger o three cents, which is expected to increase annual by some $800,000,000. Unfortunately, little of this s likely to find its way into the pockets of share icularly this year, as the advance in rates only becomes effective in June, while advances in wages have been ordered which are retroactive, and may absorb this year $325,000,000. The high cost of fuel will probably add another $150,000,000 to operating expenses, and the increasing cost of the hundred and one other items required by railroads will absorb a further large amount, so that the balance left over through increased rates does not promise to represent any substantial sum.

"Be that as it may, it is cause for congratulation that Secretary McAdoo has finally allowed an increase in rates which is even larger than any the railroads had previously asked of the Interstate Commerce Commission. In fact, the whole trend of the secretary's attitude should go far to remove any uneasiness concerning the physical condition of the roads when government control ceases. Indeed, this control may be of direct ultimate benefit to the railroad industry of the country, since actual experience of management will have taught the government many lessons that could not have been learned in any other way. This thought is steadily gaining ground, and is creating a better market position for railroad securities, for railroad bonds particularly."

GOVERNMENT COMPETITION IN BANKING

At the annual convention of the Savings Banks Association of the State of New York, held in New York city, May 17th, 1918, Hon. Myron T. Herrick, president of the Society for Savings in the city of Cleveland, expressed the opinion that the government was dealing a severe blow to private savings banks by promoting the postal savings banks and the federal farm loan system. He declared that the private banks must now face a highly privileged competition, like that which has crushed out individual initiative and private enterprise in many foreign nations.

* * *

Following the submarine raid on the Atlantic coast on Monday, marine insurance rates in New York were practically doubled, and some companies refused to accept risks at any price.

New Westminster, B.C.
CANADA

Bonds for Sale

Tenders are invited for an issue of five hundred thousand dollars, City of New Westminster, British Columbia, five-year six per cent. Municipal Bonds, authorized by Special Act, and secured by various bond issues. Delivery at the Bank of Montreal, New Westminster. Sealed tenders will be received by the undersigned up to 2 p.m.,

10th June, 1918,

when same will be opened in the Mayor's office, City Hall. Highest or any tender not necessarily accepted.

Official permission for the issue of these securities, as required by Order-in-Council (3439) of December 22, 1917, has been duly obtained. Such permission, however, does not constitute an approval of the issue as regards its merits or security in any respect. It signifies merely that the sale of these securities is not considered to be incompatible with the requirements of Canada's War Finance. Further particulars on request.

R. S. GILCHRIST,
City Treasurer.

New Westminster, B.C.

IMPORTANCE OF LIFE INSURANCE TO BANKERS

The American Bankers' Association has recommended the use of new credit forms including the following questions:—

1. For farmers—Life insurance carried, and who is the beneficiary?

2. For firms or individual manufacturer or merchant—Amount of life insurance carried, and the beneficiary?

3. For the use of corporations, manufacturers or merchants—Amount of life insurance carried for the benefit of the company?

NEW WAR LOAN

No announcement has as yet been made regarding the details of the coming Canadian loan. Benefiting, however, by the experience of the Victory loan, the department of finance is planning to have definitive bonds ready for delivery upon full payment being made. The previous system involved two exchanges; the first being the exchange of the bank receipt for the government's interim certificate, and the second being the exchange of the interim certificate for the definitive bonds. The latter, it is understood, has not yet been completed, and it is already six months since the loan was made. This was one of the most objectionable features of the Victory loan. Plans for the subscription campaign are already being made.

PERSONAL NOTES

MR. J. W. VINCENT, deputy minister of inland revenue, has retired.

MR. A. E. HAM, insurance commissioner for Manitoba, has resigned.

MR. L. W. SMITH, manager of the Merchants' Bank at Nanaimo, B.C., left for Red Deer, Alberta, on a business trip last week.

MR. PAUL DE MARTIGNY has become French manager of the Montreal Stock Exchange firm of H. McConnolly and Company.

MR. O. W. PEASE, manager for Canada of the Queensland Insurance Company, is now in Western Canada in connection with the organization of a field force.

MR. WILLIAM THOMAS PERRY, manager for Canada of the Ocean Accident and Guarantee Corporation, Limited, is at present making a tour of the western provinces.

MR. M. W. MORTON, who was manager of the Bank of Hamilton at Brandon, Man., for seven years, has been transferred to the Regina branch of the same bank.

MR. W. R. PARTINGTON has been appointed to the position of inspector for British Columbia of the life insurance department of the Royal Insurance Company of Liverpool, England.

MR. E. J. LEVESON, the head of Leveson, Limited, Vancouver and Montreal, and a prominent citizen of Vancouver, has been elected a director of the British-American Trust Company.

The HON. GEORGE A. BELL, the minister of telephones of the province of Saskatchewan, has been appointed chairman of the local government board for the province. He is a native of Brant County, Ontario.

SIR GEORGE BURY, vice-president of the Canadian Pacific Railway, arrived in Winnipeg last week from the West. He will remain there for a few days before proceeding to headquarters in Montreal.

MR. HENRY MOONEY, who has represented the Mutual Life of Canada at Ottawa for the past 28 years, has retired. He will be succeeded by his son, Mr. J. Wilbur Mooney, who has been associated with him in business for many years.

SALE OF MONTREAL BONDS

The city of Montreal has awarded $6,100,000 6 per cent. 5-year bonds to the Hochelaga Bank at 97 and interest. Tenders were received by the Bank of Montreal, acting as the fiscal agent of the city. It is understood that the tender of the bank was on behalf of a number of French-Canadian bond houses, the names of which have not yet been announced. Another tender was sent in by a syndicate, consisting of Harris, Forbes and Company, incorporated, Wood, Gundy and Company, Dominion Securities Corporation, A. E. Ames and Company and C. Meredith and Company, Limited. They offered a price of 96.05 and interest. The price received of 97 and interest is regarded as extremely favorable, being a little better than a 6¾ per cent. basis, while that of the other syndicate was about ¼ of a point above a 7 per cent. basis. Another issue of $6,900,000 6 per cent. 5-year bonds was sold in the winter at 95.84. Montreal has now borrowed $13,000,000 this year, mostly to redeem obligations which were maturing. This is the heaviest borrowing of any Canadian municipality or province so far for 1918. It is understood that the agreement between the city and the successful tenderers for the present issue provides for delivery of $2,000,000 bonds on June 28th, another $2,000,000 on August 1st, and the balance on September 1st.

The London and Lake Erie Transportation Company, running an electric railway through the city of St. Thomas, has made an offer to the city that it acquire the south end of the line running between St. Thomas and Port Stanley, for approximately $150,000. The committee is now considering the question. The company itself would continue to run the south end of the line from St. Thomas to London.

A Practical Pointer on Salesmanship

It is of first importance in good salesmanship to select a worthwhile article to sell, something about which you can become enthusiastic with a reason—a reason that will last. In Life Insurance Salesmanship, for instance, a discriminating agent would naturally select the policies of the Mutual Life of Canada because—first, the Company is well-established—Second, it has an unblemished record—Third, it has a continental reputation as a dividend payer—Fourth, it is a democratic organization—Fifth, it is a wonderfully successful going concern—and lastly, being the only Canadian Policyholders' Company its contracts find a ready market. Where a company is so favorably known one half of the trouble of making the sale is avoided. If you get the best goods in your line and go to it, success is certain. Last year our agents placed $20,000,000 paid-for business.

The Mutual Life Assurance Co. of Canada

CHARLES RUBY, General Manager R. P. CLEMENT, K C., President

Who Takes the Chances?

Who runs the risk when the breadwinner neglects to secure the protection of Life Insurance for those dependent upon him?

Not himself surely, but those for whom it is his duty to provide run the risk of his untimely death.

Whatever chances a man may rightly take for himself, there can be no excuse for subjecting others to a risk against which they cannot guard.

The Great-West Life Policies offer all that can be desired in Life Insurance; low rates, high profit returns, and the safeguard of careful, conservative management.

INSURANCE BUSINESS IN MANITOBA

Good Progress Indicated for the Year — Fire Losses are Heavy

The report of the superintendent of Insurance and Fire Commissioner of the province of Manitoba for the year ended November, 1917, contains the following statement of business for the year:—

	Premiums collected during the year 1916.	Losses paid.
Fire and marine	$2,816,505.82	$1,461,802.81
Hail	328,005.15	294,802.81
Life	3,901,059.94	1,102,571.99
Life—matured endowments	....	176,166.52
Accident	129,076.70	46,257.55
Livestock	19,685.11	15,629.62
Automobile	75,736.17	32,513.86
Sickness	99,056.02	34,845.14
Employers' liability	133,962.92	44,858.01
Guarantee	158,442.75	48,263.85
Plate glass	23,540.07	11,071.29
Burglary	10,156.31	560.10
Tornado	5,969.34	1,248.07
Other classes	14,336.13	3,040.02
	$7,715,532.43	$3,273,663.31

At November 30, 1917, there were 50 licensed insurance companies doing business under the Manitoba Insurance Act, classified as follows: Fire insurance companies, 4; life insurance companies, 6; hail insurance companies, 3; plate glass insurance companies, 1; accident insurance companies, 1; mutual fire insurance companies, 6; fraternal societies. 26; employers' liability insurance companies, 2; marine and automobile insurance companies, 1; total, 50.

The total fees collected amounted to $44,598.95.

The report also refers to the heavy fire losses for the year. "Many of the fires, upon investigation, have been found to be the result of gross carelessness on the part of the individual concerned. A large proportion of fires is due to preventable causes, such as the accumulation of paper, wood and other inflammable material in places where contact with heat or the accidental dropping of a match, cigar or cigarette stub sets up a conflagration, resulting in great loss both in money and human life. Only by the continuation of educationary methods can the public be made to realize that all loss by fire is a loss to the community, and is not covered by the money paid over by the insurance company. The excessive risks accepted and high ratio of fire loss sustained by the companies has to be compensated for by the high rate premiums that the general public are compelled to pay.

"The destruction of food values in elevators, wholesale houses and mercantile stores amounting to over $500,000, at a time when food conservation is especially necessary, demands from those having charge of these properties the greatest possible efforts to prevent such disastrous fires.

"The destruction of 102 barns and outbuildings has caused great inconvenience as well as monetary loss to the farming community. Two hundred and ninety-five fires in household dwellings have caused losses amounting to $156,847, and the burning of two quarry plants and one fishery plant has resulted in a loss of $286,384. Hospitals, hotels, public halls and schools have suffered from fires during the year. Continuous efforts have been made to arouse attention to the common dangers, and induce extra precautions against fire waste. The importance of care in storage and proper ventilation of barns and other farm buildings, have been enforced.

"We have visited during the year. Selkirk. West Selkirk, Basswood, Emerson, Rivers, Souris, Carman, Brandon, Dauphin, Virden, Elgin. Eden, Killarney. Gladstone. Minto, Neepawa, Rapid City, Boissevain, Deloraine, Whitemouth, Shoal Lake, Tyndall, Lyall. Binscarth. Moosehorn, Arnes, Balsam Bay, Gypsumville, Stonewall. Stony Mountain, Hodgson. St. Claude, La Riviere, St. Adolph, Russell, Chatfield, Steinbach, Sanford, Beausejour, Winnipeg, inspecting premises and advising as to removal of dangerous conditions. Eighty-four inspections of dilapidated premises, etc., have been made in Winnipeg with a view to fire prevention.

"Ninety-two fires resulting in a monetary loss of $136,860 was directly due to carelessness in the use of tobacco and matches. Forty-five fires with $28,662 loss through defective construction of chimneys. Four fires involving $193,734 loss arose from electric wiring. I am of the opinion that our municipal and civic authorities should institute more effective building inspection, so that many fires in the future will be prevented.

"Under the provisions of the fire prevention act, steps have been taken by the appointment of fire guardians, located in all parts of the province, and I have every confidence that this will result in a substantial reduction of prairie and timber fires."

CANADA'S FORESTS

The Canadian Forestry Journal, in its issue of May, 1918, calls attention to the fact that Britain is now more than ever before dependent on Canada for its supplies of lumber. Formerly, most of the Canadian exports in timber went to the United States, while Britain secured its supply from Russia. The proportion derived by the United Kingdom from sources within the Empire was 22 per cent. in 1899 and only 10 per cent. in 1913. Now, however, the Russian source of supply is cut off indefinitely, and 60 per cent. of Britain's temporary imports are, therefore, no longer available.

Canada, unfortunately, is not in the best position to assume the responsibility for this supply. Our forest resources are unquestionably being depleted, and only in the past few years has the necessity for conservation been realized. It will be many years before actual results in the way of improvement can be obtained. While we have no way of knowing just how long our natural resources would last, it is beyond doubt that their exhaustion would be merely a matter of time. Not only, therefore, must our present resources be used very sparingly, but every possible means must be taken to assure our future supply. Regarding the Russian forests, the Forestry Journal gives the following description:—

"The Russian forests are something of a mystery, and the reports which reach us are conflicting. The area of land classed as forests in Russia and Siberia is enormous, amounting to 1,260,000 square miles, of which by far the greater part belongs to the State. Much of the so-called forest is without commercial value. Of the million square miles belonging to the State, less than two-thirds are true forest land. Applying this proportion to the whole area, the total extent of true forest land in Russia and Siberia is estimated at 814,000 square miles. To this must be added 82,000 square miles of forest in Finland, making a total of 896,000 square miles for the Russian Empire. These forests spread over a very wide area, and, in climates ranging from temperate to Arctic, vary greatly in the amount of timber they carry and in the rate of growth. The forests of central Russia appear to be generally of poor quality, and with regard to Siberia, railway construction on a large scale would be necessary to make its timber available for export. Devastation by the inhabitants and fires have also deprived a great part of the Siberian forests of their value. The timber imported into the United Kingdom has hitherto come from the virgin provinces and from Archangel. While the information at our disposal indicates that the timber produced by these northern forests could be very considerably increased without exceeding the annual growth, it is evident that permanency of supply must depend on the introduction of systematic management. The growth in the northern forests is extremely slow, and it will take a long time to replace the pine, spruce and larch now being felled. It must also be remembered that the development of the Russian Empire is certain to be accompanied by an increased home consumption, which may, as in the United States, gradually curtail, or even extinguish, the reserves available for export."

Britain's own timber supply has never been large, and has been reduced greatly during the past two or three years. It is estimated that within a year there will be comparatively little softwood timber left in the country, and hardwood timber will have decreased very much. With the single exception of Portugal, Great Britain has the least proportion of land under forest of any country in Europe. The figures for Great Britain are 4 per cent.; Sweden, 47 per cent.; Russia in Europe, 37 per cent.; Germany, 25 per cent.; Norway, 21 per cent.; France, 18 per cent.

Representatives of the British mercantile marine, in conference with Lord Rhondda, have agreed to a reduction of 50 per cent. in their meat allowance.

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

INLAND REVENUE RECEIPTS FOR MONTREAL

Inland revenue receipts in Montreal for May will approximate very closely $1,884,352.19, the record receipts for that month in the history of the city. Last year the receipts for the same month amounted to $1,233,652.20.

In customs receipts there is a pronounced falling off from the high mark of May last year, when the receipts were $4,029,716.43. This year the receipts will be about $3,250,000, very little more than the $3,226,881.16 received for May, 1916.

CANADIAN STEEL OUTPUT IN 1917.

The following is a report of the steel output of Canada in 1917, compared with two previous years, the December figures of last year being estimated:—

	1915. Tons.	1916. Tons.	1917. Tons.
Steel ingots	989,829	1,397,703	1,686,005
Direct castings	31,067	30,546	42,807
Total steel	1,020,896	1,428,249	1,728,812

The relative output of electric steel was as follows:—

	1915. Tons.	1916. Tons.	1917. Tons.
Electric steel	5,625	19,639	39,069

LONDON AND LANCASHIRE FIRE INSURANCE CO.

The 56th annual meeting of the London and Lancashire Fire Insurance Company, Limited, was held in London, England, on May 1st. The year's business has been entirely satisfactory.

The net premiums from the fire department amounted to $10,567,795, and the net losses to $4,588,820, or about 44 per cent. After increasing the fire funds from $5,807,500 to $6,227,500, the sum of $2,174,515 was transferred to profit and loss. In the marine department results were also satisfactory in spite of the conditions during the year. The net premiums were $2,755,000, and the net losses $1,754,230, so that about $1,500,000 was realized. The marine funds were increased from $1,730,000 to $1,852,500, and the balance transferred to profit and loss. The net premiums from the accident and general department amounted to $4,162,565, and losses were less than 50 per cent. of this. The accident funds are now $2,570,000, and about $500,000 has been transferred to profit and loss.

During the year the company arranged to acquire the shares of the Marine Insurance Company, Limited, established in 1836, and by May 1st, 1918, over 99¾ per cent. of the shares had been secured. The total expense of this transaction had been over $8,000.000, and the assets of the Marine Company amounted to about $7,500,000. The difference of $900 000 has been charged up to profit and loss account.

The total revenue for the year was about $3,500,000, which, added to the balance from last year of $4,500,000, gave a total available of $8.000.000. One million was set aside on account of depreciation of investments, and a similar sum for the income tax on profits and the excess profits duty. The cost of acquiring the Marine Insurance Company was also included, and dividends amounted to over $750.000. The balance carried forward is now $4,200,000. This is less than the corresponding amount last year on account of the large reserve for depreciation and the cost of acquiring the business of the Marine Insurance Company.

In addition to doing business in the British Isles, the company extends its operations to the United States, India, Australia, New Zealand, South Africa and South America. The manager for Canada is Mr. Alfred Wright, who has been successful in promoting business here. The secretary of the Toronto district is Mr. A. E. Blogg. Mr. A. W. Blake is district secretary in Winnipeg, and Mr. C. E. Sword is manager in Montreal.

It is reported that anthracite coal of good quality has been discovered near Toronto. The quality is said to be equal to that of the Pennsylvania mines, and the situation is closer to Toronto. Thus far only small veins have been discovered. A syndicate has been organized which has obtained mining rights on about 1,000 acres, and in a short time boring will be commenced.

CONDENSED ADVERTISEMENTS

Manufactures Essential to Canada

President of Canadian Manufacturers' Association States Case for Manufacturers — Patriotic Part Has Been Played — Are Under an Obligation to Provide Employment — Tariffs Should Not be Reduced — Exports of Manufactures Have Helped to Maintain Balance of Trade.

In opening the annual convention of the Canadian Manufacturers' Association in Montreal on Wednesday, the 12th instant, the president, Mr. S. R. Parsons, summarized the achievements of the manufacturers during the past few years as follows:—

"1. Manufacturers have contributed more largely than any other class to the furnishing of men for the colors.

"2. Manufacturers in large numbers have entered into personal obligations with those of their men who may return as to giving them employment. As this matter of employment will be one of the most insistent questions after peace is declared, it might pertinently be asked how manufacturers can fulfil their part of the compact if the fiscal policy of the country is to be radically changed?

"3. Manufacturers have been called upon to assume greater burdens of taxation than possibly any other class, and especially the farming community.

"4. Manufacturers have, perhaps more largely than any other class, contributed to all patriotic funds which have been launched.

"5. No class has subscribed more liberally to all government war loans, and it must be remembered that in very many cases those so subscribing have undertaken large obligations at their bankers to enable them to do this. Manufacturers would greatly regret being placed in such a position, either by reason of removal of the tariff or taxation measures, causing strangulation of industry, that would not permit them to continue such relationships towards future government undertakings.

"6. No class has supported the farming community as much in the way of helping to supply men for the garnering of the crops, and in many cases even paying the difference in wages over and above what the farmer contributed.

"7. If it had not been for the manufacturers of this country the Allies would not only have been short of munitions, but the country would have gone bankrupt on account of the balance of trade being against us."

Discussing the tariff, Mr. Parsons spoke as follows:—

"Manufacturers feel that the tariff could and should be changed here and there, and so amended that it would apply more scientifically than it does at the present time.

"For this and other reasons the manufacturers would like to see created what might be termed 'A Trade and Tariff Board'; such a board to be composed of representative men of actual experience and wide knowledge of commercial conditions, and whose broad outlook and vision would fit them particularly for the proper study of these great questions, so vital to our national interests; this board to report to the government from time to time their findings, and if, after a full and complete survey of the situation, it be clearly established that the tariff is inimical to the best interests of the country at large; nay, more than that, if it is not actually essential from a national standpoint, then, I say, 'Away with the tariff.' "

The relationship between employers and employees and the problems of the tariff, as affecting manufacturers and agriculturalists, monopolized the presidential address.

"If democracy is going to be anything more than a label on an empty bottle, it must characterize our human relationships and actions," said Mr. Parsons. "Capital, on the one hand, must realize the duty of caring for the welfare of all those associated in industry, and Labor must be ready to co-operate to the fullest possible extent in a spirit of helpfulness.

"When we think of what our men from the ranks of Labor have done in this great war, coming forward largely under voluntary enlistment, and when we realize further the valor they have displayed on the battle-front, they are not only entitled to proper recognition at home, but to a consideration of their interests, which hitherto they have not had in large enough measure.

"One thing appears to be certain, namely, that where individual interest, ambition and good work are shown, these must all be recognized by both interests in the business and properly rewarded. On the other hand, the unwilling and the inefficient must not block the path of the ready and the skillful.

"There can be no universal betterment applying to each and every worker in any scheme of co-operation without individual participation if we are to hold our own against other countries and nations whose competition we have to meet both at home and abroad."

Turning to the tariff, Mr. Parsons said: "We are now in danger, especially on account of the propaganda of one section of our population, of failing to profit by experience, losing our balance, and blindly yielding to the demand for undermining that which has proved to be the great bulwark of our national, industrial and commercial life."

Having suggested the creation of a Tariff and Trade Board, Mr. Parsons said the time had arrived when all classes of the community, vitally interested, must clearly have a voice in the retention of the tariff or otherwise. A conference with the Grain Growers was solicited.

"We would, however, be altogether insincere and dishonest did we not state in general terms that if there is one thing more certain than another, it is that manufacturers could not possibly exist in this country without the small measure of protection which the tariff affords them. The two stand or fall together.

> "Speaking broadly, Canada must choose between the tariff with manufacturers on the one hand, or free trade without manufacturers on the other; the issue cannot be dodged, and should not be clouded."

Even under the present Democratic United States government's reduced schedules, the average rate of duty paid on imports of dutiable goods coming into the United States for the year ended June 30th, 1916, was 30.67 per cent., while in Canada, for the year ended March 31st, 1917, it was only 23.78 per cent. The war tax of 7½ per cent., although added to the cost of imported goods, free and dutiable, was not proposed or desired by the manufacturers.

"It would appear, therefore, that those who complain of our high tariff walls have not full knowledge of our comparative position in this matter," said Mr. Parsons. "It should be remembered that manufacturers pay heavy duties on much of their imported raw materials. For instance, a large machinery manufacturing concern in Toronto have advised me that, while the tariff on their finished article would appear to give them a protection of 27½ per cent., yet their figures over a number of years show that the average rate of duty they pay on their raw materials is 25 per cent."

Farmers Have Prospered Immensely.

The Grain Growers' Guide was quoted that there will be 60,000 motor cars purchased in the western provinces this year at an average value of $1,000 each, and that whereas the average for Canada is one auto to fifty-seven persons, for the west it is one to twenty; also, that the average capital worth of the Guide's subscribers was $25,878.

"Taking their own figures of the average of farm holdings and the average returns for the past three years, it shows that the cereals alone, without counting any other crops, have produced 32 per cent. per year upon the capital," said Mr. Parsons. "A study of provincial reports gives the total value of farm products, other than cereals, at a little larger figure than the total value of all cereals. It is fair to assume, therefore, that on the average all the expenses of farming operations would be more than met by the production of other than cereal crops. This, then, would leave at least the profit on cereals as net returns, and I do not hesitate to say that it would be quite double the average net profits of manufacturing during the same period of three years.

"The first year (1915) was disastrous, generally speaking, in manufacturing, and, while the last two years have been unusually profitable in many lines, yet in others war conditions have brought paralysis. No class in Canada, however, rejoices more in the prosperity of the farmers than the manufacturers. It is interesting to note that the total number of farmers in Canada holding ten acres and over is 633,748, or about equal to the total number directly engaged and employed in manufacturing."

Tariff is Indispensable.

Including munitions and other industries in which women are now largely employed, the salary and wage-earners engaged in manufacturing was estimated at 650,000, with probably 1,625,000 directly dependent on these wages and 25 to 50 per cent. more indirectly making their living on account of the total industrial dependents. Total capital employed is estimated at 2½ billions.

Hamilton has 340 factories, 30,000 employees and $25,000,000 annual wage bill. Upwards of fifty United States firms have located there, directly due to protection. Of the population of 106,000, over 90,000 are, directly or indirectly, dependent on the industries. "Any interference in a large way with the tariff which now enables these manufacturers to do business would practically wipe out the city of Hamilton. What is true of Hamilton would be measurably true of many other towns and cities," said Mr. Parsons.

As to removing the duty on agricultural implements, there are approximately 160 firms making one or more lines of farm implements, but the number of implement plants is sixty; capital, $60,000,000; total wages and salary bills, $7,000,000; dependents, about 50,000.

"A few of the larger concerns might still live on account of their large foreign export business," said Mr. Parsons, "yet as they purchase millions of dollars worth of supplies of all sorts from other manufacturers in Canada, all such secondary concerns would be adversely affected immediately, and there would be a general weakening and tearing down of a large portion of the industrial fabric of the country throughout. Figuring the total duty paid on agricultural implements in 1916, it means about 3½ cents for every $100, or, in other words, a farm valued at $10,000 would pay on the average annually $3.50. This does not seem like a staggering obligation by way of contribution to the national funds.

"The removal of the duty on tractors without any consultation with the tractor manufacturers to see what they could do to help out the situation calling for greater production, and without even making provision for the rebate of the duty on raw materials imported by the tractor manufacturers, was an unfair and unjust measure. We made such representations to the government that they finally rebated the duty charges on raw materials, but the tractor industry, where hundreds of men were employed and others in anticipation, as well as hundreds of thousands of dollars already invested, has been paralyzed, at all events for the present.

"Manufacturers are, however, quite tired of the abuse that is being heaped upon them from interested quarters. The profits of manufacturers, generally speaking, have been grossly exaggerated, and, while here and there abnormal figures are shown (which are subsequently largely extracted by the business profits tax), yet the large profits feature also applies in the case of agriculturists. The great majority, however, of these two classes, as well as of all other classes in the country, are simply making reasonable and necessary headway.

"The time has arrived, therefore, when the government, members of parliament, and the people at large must be fair to the manufacturers of this country and not consider their interests as a football to be kicked about by interested politicians and others, otherwise the national interests are sure to be adversely affected. The tirade of abuse has already gone too far.

"By way of contrast, it is interesting to note that in Australia the Prime Minister, Mr. Hughes, called all the manufacturers together in conference and outlined to them a very definite scheme, calling for their help, and promising the co-operation of the government for the furtherance of industry, and especially to try and secure export business.

Manufacturers Must Maintain Their Own Case.

"In Canada, however, not only have we received no direct help and lead from the government in connection with planning for our industries after the war in the nation's interests, but a considerable section of our population is keeping the country in a foment of agitation which would tend to destroy rather than to build up.

"As far as export trade is concerned, manufacturers in Canada may be forced in the national interests to sell their wares at a merely nominal margin of profit so as to help preserve the balance of trade and at the same time give employment to the largest possible number of people. The crux of the situation calling forth denunciation of industry we believe to be just here. Interested parties have poisoned the minds of agriculturists and other classes in this country and have led them to believe that the manufacturers not only received directly an enormous advantage from the tariff which they were not entitled to and in consequence were making profits which were out of all proportion to the risks involved, but were also actuated by the most selfish motives.

"It is, therefore, opportune to say fairly, honestly, and emphatically that the average net return from the investment of capital in industry is not more than it should be to encourage men to take the risks incident thereto. Further, while here and there large profits have been made by manufacturers, as is also the case of agriculturists and other classes, yet the history of the past generation shows thousands of abandoned industrial enterprises in which men have lost their all, just as there have been abandoned farms that were not made to pay.

"In the United States, according to recent returns made to the Federal Trade Commission, out of 250,000 trading and manufacturing concerns over 100,000 earn no net income whatever; in addition, 90,000 of them make less than $5,000 per year, some of whom have very large capital invested. It is the same thing in Canada.

"No nation can become great that is concerned solely with agriculture. Every important country in the world, except Great Britain, has found it necessary to adopt a policy which gives protection to its home industries, and many believe that she will be forced to fall into line after the war is over. Under free trade, agriculture has not prospered.

"If the agriculturists of the West are not receiving proper consideration, then we should be the first to cooperate with them in trying to remedy their difficulties.

"There is said to be a condition existing among the truck farmers and gardeners of the east, whereby they receive only an average of thirty-five cents as their portion of every dollar's worth of products sold. If this is correct, it is a wrong that should be righted, and for this purpose the facilities of our association would be placed at the disposal of those interested."

Statistics just presented to the city guardians of Fort William, show all civic utilities more profitable than in 1917. Substantial surpluses are shown on water, light and telephone services, while the deficit on street railway operation has been reduced by more than $1,000.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Ontario Silver Company.—For the first time in 15 years the company has declared a dividend. It is 50 cents a share.

Shawinigan Water and Power Company.—A quarterly dividend of 1¾ per cent., payable July 10 to shareholders of record of June 27, has been declared.

Vipond-North Thompson Mines.—It is likely that the mines will close down for the present. This is due, it is understood, to financial difficulties, aggravated by high operating costs and shortage of labor.

Dome Lake Mines.—The conditions of the company since the annual report was issued have improved. The management has been running through the mill good ore from a body opened up at the 500-foot level. The value of the ore at this level is approximately $16 to the ton.

Walkerville Light and Power Company.—The annual report of the company presented to Walkerville council on June 11th, shows that earnings for 1917 totalled $152,000, against $112,000 in 1916. Expenditures were $135,000 for the year, or about $30,000 greater than in 1916. The net profits for 1917 amounted to $10,380.

Nova Scotia Steel and Coal Company.—The company's plants broke all previous records in May for steel and iron production, despite a labor shortage. The open-hearth plant produced 14,558 tons of steel ingots and the blast furnace 8,835 tons of pig iron, as against the previous record of 14,243 tons of steel and 8,016 tons of iron in March, 1917.

Tough-Oakes Mine.—It is likely that the mine will have to close down. High operating costs and shortage of labor are reasons, but operations are seriously handicapped by meagre ore reserves. This condition is due not to lack of good pay ore bodies in the property, but to backwardness in development of known ore bodies. The company requires further financing.

Lake Shore Mine.—The showing of the Lake Shore Mine for May was about equal to that of April, which was remarkably good. Since the mill started operations on March 8th, the output up to April 30th, was $66,000. The production for May was in the neighborhood of $45,000. The mine would have done better had there been sufficient labor available.

Vacuum Oil and Gas Company.—The total revenue of the company for the year ended April 30th, 1918, was $13,445, compared with $12,020 in 1917. The operating account shows $12,570 spent on field work expenses, as compared with $10,651 the year previous. The result of the year's operation thus showed a deficit of $2,614, compared with a deficit of $5,559 in the previous year. This was transferred to the development account.

Southern Canada Power Extension.—The Southern Canada Power Company has completed its high tension transmission lines with the necessary sub-stations, etc., connecting the cities of Sherbrooke and Granby. This line, which is of 48,000 volts capacity, passes through Magog, Knowlton, Foster, etc., and serves the intervening territory with electric power. The company is also building additional high tension transmission lines connecting Brockville with the city of Sherbrooke.

Tuckett Tobacco Company.—The statement of the company for the fiscal year ended March 31st last shows a gain in profits of $14,983, the total of $201,481 being the largest since 1915. This compares with $189,498 in 1917, $150,991 in 1916, $142,795 in 1915, $214,225 in 1914 and $303,384 the first year of the company's operations, the present being the sixth annual statement. After the deduction of $140,000 dividends on the preferred stock there was carried to surplus account a balance of $61,421. The total at the credit of this account is now $337,933.

GROWTH OF MANUFACTURERS' ASSOCIATION

Increase in Membership and in Revenue—Election of New Officers

The revenue of the Canadian Manufacturers' Association for the year was $79,869, and expenditures were $72,651, an increase over last year of $13,246 and $8,014, respectively. The net assets are now $46,730. During the year a library of about 500 volumes was established.

S. R. PARSONS,
Retiring President of Manufacturers' Association.

The executive committee, in its report at the annual meeting, dealt with the question of research, and suggested that one or more men, familiar with actual industrial problems in lines other than those already represented, should be added to the government advisory council. It also suggests that the British plans for industrial housing after the war should be considered by Canada.

Discussing the bankruptcy legislation of the Dominion parliament, the legislation committee points out that administration by the provincial courts is liable to prove a fatal defect. The committee would favor effective control of a federal official or board, also it doubts whether it will prove satisfactory to provide for the discharge of the bankrupt without an effective centralized check and supervision of the trustee and his accounts. The insurance committee states that legislation to deal with fire waste should be framed to deal especially with standard minimum requirements, and provisions for adequate inspection.

The membership on April 30th, 1918, was 3,389, an increase of 150. By provinces the membership is distributed as follows:—

Provinces.	Members.	Increase or decrease.
Ontario	1,891	+35
Quebec	755	— 4
Nova Scotia	96	..
New Brunswick	69	..
Prince Edward Island ..	3	..
British Columbia	72	..
Manitoba	341	..
Alberta and Saskatchewan	162	..

The membership of the Maritime Provinces increased by 20; that of British Columbia by 8; and that of the prairie provinces by 91.

Mr. S. R. Parsons, the retiring president of the association, was born in Port Hope, Ont., in 1854, and educated at Port Hope Grammar School. While still a young man he went to Winnipeg and engaged in the stationery business as senior partner of the firm of Parsons, Bell and Company, which afterwards merged with the Consolidated Stationery Company, Limited, of which he was president for some years.

When the British-American Oil Company was established in 1906, he became its president, which position he still holds. He was elected chairman of the Transportation Committee of the Canadian Manufacturers' Association for four successive years (1911-15); elected second vice-president in 1915; first vice-president in 1916; and president in 1917. Mr. Parsons was chairman of the Ontario board of directors. Canadian Fire Insurance Company, since 1900; a member of the Northern Ontario Fire Relief Committee; and a member of the Ontario executive of the Bonne Entente.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Calgary, Alta.—June 3—Home of Mr. Saxton at 619 Eleventh Avenue East was damaged.

Chatham, Ont.—June 6—The Hotel Glassford was damaged. Cause reported as spontaneous combustion. Estimated loss, $25.

Collingwood, Ont.—June 1—The original office of the Collingwood Shipbuilding Company was damaged. Estimated loss, $8,000.

June 6—Exhibition stables in the town park were damaged.

Edmonton, Alta.—June 3—The Albany Apartments, 125th Street and 110th Avenue, were damaged. Caused by overheated chimney.

Euphrasia, Ont.—June 11—Home of Richard Lyons was destroyed.

Halifax, N.S.—June 7—The machine shop at the dockyards and several adjoining buildings were destroyed.

Hamilton, Ont.—June 3—The Hamilton Steel Wheel Company's munition plant was damaged.

Kingsville, Ont.—June 5—Barn owned by George Branchflower was destroyed when struck by lightning. Estimated loss, 1,060. Covered by insurance in the Essex and Kent Fire Insurance Company.

Milington, Que.—June 5—The dwelling-house, mill and barn belonging to Mrs. Patch were destroyed. Estimated loss, $6,000.

Mount Albert, Ont.—June 11—Barns of Joshua Watt were destroyed after being struck by lightning.

New Liskeard, Ont.—June 9—Farm buildings and machinery of Mr. Loach, on the North Road, were damaged. Caused by spark from wood-cutting machine. Estimated loss, $4,000.

New Waterford, N.S.—June 6—Building owned by Sam Karrell was damaged.

Nova Scotia.—June 3—Forest fires in Queens and Lunenburg counties were raging and have spread in toward settlements, destroying a number of houses, while others are threatened. Within four miles of Liverpool at least ten houses have deen destroyed in addition to much valuable forest properties. In Lunenburg county the whole district of West Dublin is threatened. Four houses already have been destroyed. Nearly all the men of the districts are fishing in the Newfoundland Banks, and women, children and old men, assisted by volunteers from other parts of the county are fighting the fire desperately to prevent the wiping out of the entire Dublin settlement.

Owen Sound, Ont.—June 4—Small shed at the rear of J. R. Boyd's butcher shop, on Second Avenue East, was destroyed. Estimated loss, $100.

Port Credit, Ont.—June 11—Residence of Mr. W. R. Wadsworth was destroyed after being struck by lightning. Estimated loss, $8,000.

St. Catharines, Ont.—June 7—The moulding-shop at Black's foundry and many patterns were destroyed. Estimated loss, $7,000.

Whitevale, Ont.—June 11—Barn of H. Pointer, which was struck by lightning, was destroyed.

Windham, Ont.—June 11—Barns and machinery of Wm. Vert were destroyed when struck by lightning.

Winnipeg, Man.—June 8 The Winnipeg Telegram printing plant was damaged.

PUBLICATIONS RECEIVED

Toronto Board of Trade.—The annual report of the Toronto Board of Trade for the year 1917 has just been issued. In addition to the reports of the various committees, it also includes the president's address, secretary's report, list of officers and members and roll of honor. An article by Professor J. C. Fields upon "Science and Industry," the report of the Northern Ontario Fire Relief Committee, a description of the Union Stockyards, etc., also add much to the value of the volume. A number of illustrations of Toronto and district are included.

RISING INTEREST RATES

The rate of interest is a matter of vital importance in the economic life of any nation. Cheap money and cheap and efficient labor made the United Kingdom the world's greatest commercial state. It is not denied that there were other important factors in the situation, but cheap and abundant capital was not the least important. The phenomenal reversal in Canada's balance of trade, the magnificent response of the people to the government's request for funds to finance the war, the nation's relative self-sufficiency in an economic way during these war years, should not obscure the fact that we shall need capital, and need it in abundance, in the years to come after the close of hostilities.

The rate of interest, therefore, is not merely a question of academic importance to the commercial and agricultural classes. Essential supplies of capital may make all the difference between industrial expansion and stagnation. During periods in which there is an increase of money in circulation and expansion of credits, there is a steady rise in general prices; and it follows that the rate of interest on long-time loans must also rise, to offset losses on the capital value of the loans when they mature—for rising prices always injure the creditor. And Canada must be both a debtor and a borrower for many years to come.

Those who cavil at the present rates charged by the banks and other lending organizations, fail to understand the underlying facts in the situation. Interest is the reward paid for the use of capital; and its rate is determined by the relation between the demand for, and the supply of, that capital. The rate, in the long run, is fixed at the point that equalizes the supply and the demand.

An elementary survey of the situation discloses the fact that the supply of capital depends upon its cost of production; for capital has a cost of production which may be estimated in terms of sacrifice, the sacrifice involved in saving. The cost of postponement of consumption, as balanced against the immediate enjoyment of goods, has greatly increased because of the harder conditions under which the world is living. Interest rates must remain high to encourage thrift, and overcome the urge of spending during these days of high cost of living.

It is plain that producers must pay high interest rates for years to come, under the conditions that confront the world. Not only is it harder to save than ever before, but there is a greater demand for loanable funds. Aside from war loans and spendthrift loans, capital is needed for productive purposes. And it is plain as a pike staff that, in the long run, interest can be paid only from the productive use of capital—even the interest upon war and other loans of a similar nature. This is a consideration that should give serious pause to such public men as may feel inclined to make "the capitalists pay for the war." The interest upon war debts, and the ultimate extinguishment of the debts themselves, can only be accomplished through speeding up production and increasing the nation's economic output. It is equally clear that no legislation can be tolerated that will tend to drive capital out of the country; for without capital the nation's economic activities will be curtailed to the point of stagnation and industrial decay.

SHORTAGE OF HOUSING ACCOMMODATION

Among the problems resulting from the scarcity of labor and high cost of production, is that of a shortage of dwelling and apartment houses. During 1914-15 there were in most cities of Canada buildings in the process of construction, the completion of which did more or less to relieve the continually increasing demand. After that, however, very few structures were commenced and during the past year or so the critical shortage of supplies and labor have made building operations practically impossible. In most of the cities and towns of Canada, there has been a sufficient margin of accommodation to permit of some increase in the requirements, and some of the smaller cities, towns and villages have experienced an actual decrease in population. On the other hand, the larger cities and many smaller cities have undergone a rapid increase in population, principally on account of the possession of industries directly connected with war operations.

Some of the cities have taken steps with a view to remedying this situation. In Guelph, about the beginning of the present month, a special committee of the Board of Trade took up the question of financing the erection of from 25 to 50 houses, costing between $1,500 and $1,700, to be sold to workingmen. Complaints were being made that several of the local factories were unable to retain their help because no houses were available. In Toronto the position was also reported as being critical. Lists of properties suitable for the erection of small houses were secured. The lots were in the most convenient of the unbuilt sections of the city, and range in price from $15 to $45 per foot.

One of the principal causes of the shortage in Toronto was the fact that considerable numbers of discharged soldiers wished to make their home there. Rents in the cities, as in practically all the other eastern cities, have been rising fairly rapidly on account of the discrepancy between the supply and the demand for buildings. The prices of improved properties have, therefore, in spite of the increase in taxes, been increasing to some extent. Unimproved property, on the other hand, is difficult to sell on account of the high taxes, and the practical impossibility of erecting dwellings upon it at a profit.

It is urged that Toronto requires several thousand new houses to sell at, say, $2,500 each, or as an alternative apartment houses providing equal accommodation. The general opinion, however, is that the separate dwellings are more economical.

To deal with the question generally, a committee has been appointed by the provincial government with Sir John Willison as its chairman. The other members of the committee are: G. Frank Beer, Rev. Peter Bryce, Ald. J. Gibbons, Capt. S. H. Marini, Thos. Roden, H. H. Williams, M. J. Haney, H. V. S. Jones, H. C. Scholfield, J. H. McKnight, E. J. B. Duncan. For the present the members are all from the city of Toronto, but it is expected that the committee will get in touch with municipal councils and other organizations interested in the subject throughout the province with a view to co-operation.

The prevailing opinion appears to be that municipalities or possibly the provincial government should take upon themselves the responsibility of providing housing accommodation. The result, it is almost certain, would be another enormous bill of expense to municipalities which are already overladen. Costs are at the present at a maximum or near a maximum and investments in works such as these would be certain to prove decidedly unprofitable. As it is proposed to extend long credit to the purchasers of the properties, considerable sums would accordingly be required to finance the scheme.

If economic conditions warrant work of this kind on a business basis, private individuals will not be lacking to engage in it, and there is no occasion for municipal action. On the other hand, if it be granted that the venture will assuredly be unprofitable no other considerations can be urged which would justify the scheme. The fact must be recognized that Canadian standards of living, including house accommodations, have been high and possibly extravagantly high in the past, compared with other countries and cities even in America. There is plenty of room for economy without injuring in any degree the health or welfare of the people of Canada.

Not long ago some school teachers, in agitating for a raise in the scale of salaries, complained that under the existing scale they would soon be obliged to vacate their private residences and share a house with another family. There are, in fact, thousands of Canadians with small families who would regard as a calamity the project of living in a house of smaller capacity than eight to twelve or even fifteen rooms. We have prided ourselves on being a hardy and enduring race, and it is not fitting, therefore, to create a clamor at the prospect of limited dwellings, and to embark upon a course of municipal expenditures of the utmost extravagance. What Europe has endured for centuries, we can endure for a decade.

It may, of course, be argued that the accommodations are sufficient, but are unevenly distributed. This is undoubtedly the case to a large degree. It could be remedied by a system of rationing; but increased municipal, or provincial, or even Dominion property taxes would effect it in a more satisfactory manner, and would at the same time provide an increase in the supply of accommodations for those of small means.

UNNECESSARY PUBLIC EXPENDITURE

On the 5th of June, Sir Wilfrid Laurier and Mr. Thomas Ahearn, president of the Ottawa Motor Club, went to Montreal to discuss a proposed boulevard from Ottawa to Gatineau, in Ottawa County, Quebec, with Sir Lomer Gouin, Premier of Quebec. This highway has been urged for some time, and the principal supporters are naturally Ottawa motorists. No decision has as yet been announced, and if public sentiment and financial conditions are taken into consideration, the subject will be dropped.

The city of Ottawa succeeded in persuading the Ontario government to undertake the construction of a highway from Ottawa to Prescott in order to link the Canadian capital with the roads of New York State, and thus pave the way for an influx of American tourists. It is now proposed to obtain a similar concession from the Quebec government to add to the attractions of the city of Ottawa. The cost of the boulevard, which is to be known as the Gouin Boulevard, is estimated at $300,000. In support of the scheme is brought forward the argument that the business derived from American tourists will indirectly repay the investment. Recent events do not justify this conclusion. A severe restraint has already been placed upon the use of automobiles in Canada, and there is every reason to believe that the regulations and taxes will be increasingly severe, not only in Canada, but also in the United States. A certain amount of traffic is, of course, inevitable, but in spite of the fact that foreign traffic for pleasure from the United States is practically impossible, there is as yet no indication of a boom in the tourist industry in Canada.

There is no justification for such an expenditure on business grounds, and most certainly apart from this, the project is purely an item of luxury. At the present time when governments and municipalities are hard pressed to secure funds for necessary or urgent improvements, it is not fitting for anybody, even a provincial government, to adopt a course of this kind. The province of British Columbia recently entered the market for funds, and the best offer they received was about a 6½ per cent. basis The funds were required for practically essential requirements. Many municipalities at the same time are unable to carry on waterworks, sewerage systems, etc., because of the same financial stringency. The approval of the department of finance should not be given to issues such as that which is proposed, and if the province is in a position to finance the expenditure out of current income, some better use could be made of the funds.

New Heads of Manufacturers' Association

W. J. BULMAN,
President, Canadian Manufacturers' Association.

Mr. W. J. Bulman, the new president of the Canadian Manufacturers' Association, is president of Bulman Brothers, Winnipeg; he is also a director of the Merchants Casualty Company, and of the Trustee Company. Mr. Bulman was born in Toronto in 1870, and went to Winnipeg and established a printing and lithographing business in 1892. He was president of the Winnipeg Industrial Bureau, is vice-president of the Manitoba Patriotic Fund, and has taken an active interest in other local and Dominion matters, including education.

T P. HOWARD,
Vice-President Canadian Manufacturers' Association.

Mr. T. P. Howard, vice-president of the association, is managing director of the Phoenix Bridge and Iron Works, of Montreal; vice-president, Structural Engineering Company; director, Canada Envelope Company. He was born in Montreal in 1869, and began his business career with the Grand Trunk Railway in 1886. He was later with the Park Steel Company, James W. Pyke and Company, and in 1898 organized the Phoenix Bridge and Iron Works.

NEW INCORPORATIONS

The Halifax Shipyards, Limited, With Capital Stock of $6,000,000, Receives Charter

The largest company incorporated during the past week was the Halifax Shipyards, Limited, with a capital stock of $6,000,000, and head office at Montreal, Que. The Canadian Western Fuel Company, Limited, with capital stock of $5,000,000, and head office at Nanaimo, B.C., received charter.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Nanaimo, B.C.—Canadian Western Fuel Company, Limited, $5,000,000.

Fort William, Ont.—J. Dyke and Sons, Limited, $250,000; J. Dyke, S. Dyke, J. A. Dyke.

Glencoe, Ont.—Detroit-Glencoe Oil Company, Limited, $650,000; W. J. Carlyle, C. H. Corigan.

Midland, Ont.—Midland Iron and Steel Company, Limited, $1,000,000; D. S. Pratt, D. L. White, J. W. Benson.

Quebec, Que.—Laurentian Manufacturing Company, Limited, $10,000; M. M. W. Quarrier-Stobo, H. C. Thorn, J. Graham.

Hamilton, Ont.—British Columbia Coal and Land Company, Limited, $750,000; H. A. Burbidge, J. R. Marshall, A. B. Turner. Bird and Son, Limited, $750,000; J. S. Lovell, W. Bain, R. Gowans.

Toronto, Ont.—Canadian Northern Rolling Stock, Limited, $100,000; D. B. Hanna, R. H. Montague, R. P. Ormsby. Canadian Stoves, Limited, $40,000; F. P. Macklem, H. Macklem, H. D. Walker. Excelsior Wood and Wool Company, Limited, $100,000; R. H. Greer, G. L. Smith, G. R. Forneret.

Vancouver, B.C.—Welland Securities, Limited, $10,000. Vickers Contracting Company, Limited, $10,000. United Theatres, Limited, $1,000,000. G. G. Heather and Company, Limited, $10,000. Terminal City Coal Company, Limited, $10,000. Sentry Manufacturing Company, Limited, $10,000. Burnaby Oil Wells, Limited, $65,000.

Montreal, Que.—International Securities Corporation, $5,000; M. M. Z. Renaud, T. Jodoin, J. Gallant. Holland's, Limited, $99.000; H. Mackay, Edson-Grenfell Place, George-Wilton Rowell. Halifax Shipyards, Limited, $6,000,000; C. Pringle, N. G. Guthrie, R. Blake. Clyde Engineering Company, Limited, $100,000; F. T. Peacock, H. Kennedy, J. Bryson. Carter-Wood Shipping Company, Limited, $40.000; G. R. Drennan, W. Fielding.

LANDS LIABLE TO BE SOLD FOR TAX ARREARS

Difficulties of the Treasurer and of the Owner Under the Ontario Assessment Act

BY H. L. CORBETT, City Treasurer, Ottawa.

To the municipal treasurer who studies the Ontario assessment act, sections and sub-sections, for guidance only as to the proper notification and procedure in conducting tax sales, the above caption may not mean very much, but to the assessed owner it may mean a great deal.

My advice to landowners is to deny themselves rather than let their taxes go in arrears. All the municipal treasurer has to do if taxes are in arrears three years (and this would count from the first of the year for which the assessment was made) is to send a list to the assessment commissioner in the spring, before a specified date, so the assessor or assessors on their rounds in making the assessments in the summer can notify the owners of vacant lands that the land is liable to be sold for taxes. If the land is built upon or occupied since the tax collector made his return of the roll to the treasurer, a separate return is made for those built upon, and this is sent to the city clerk, so that the properties can again be put on the roll for another term. A list of vacant lands notified, with any errors in the description corrected, is returned to the treasurer by the assessors. The former puts on the water rates and expenses such as advertising and commission, etc., and makes out the warrant, which is signed by the mayor and sealed with the corporation seal. This warrant will specify that on a certain day (which must be advertised in the "Ontario Gazette" once a week for four weeks, and some newspaper published within the county, for ninety-one days before the date set for the sale) the lands will be sold by public auction. The treasurer then auctions off the lands, or part, for sufficient to pay the taxes. Having received his money and given a receipt therefor, he holds the same for 12 months to give the owner a chance to redeem the land, which he has the right to do by paying the treasurer the taxes and costs, and 10 per cent. interest. If the property is not redeemed then the treasurer makes search in the registry office and sheriff's office to see if there are any encumbrances on the property. He notifies the original owner and any other persons interested that if they do not pay the amount, with costs and 15 per cent. for interest, after thirty days he will proceed to give the purchaser a deed, which will be binding and valid. This deed is signed by the mayor and treasurer, and sealed with the corporation seal, and gives the purchaser a perfect title to the land.

Thus in the foregoing I have endeavored to give a short description of the modus operandi of conducting a tax sale.

Owner is in Difficult Position.

This is all the worry the treasurer has, but not so the owner, who has probably lost his land, or part of it, for the act provides that so much as will satisfy the taxes must be sold, and this might be any number of feet or inches from one up. The owner probably bought this land expecting to sell it immediately and at a profit during the boom previous to 1914; or perhaps it was bought to build upon and then sell again with the building on it; or this land may belong to some soldier who has gone overseas. Since the great European conflict has taken place, men, money and produce are needed all the time. The cost of living has gone up very rapidly, while salaries are in a quiescent state, the prices of labor and material are much higher than in 1914 and previously. Owing to the great requirements for money for war purposes the banks have shut down on mortgage loans; the building trade having dropped, leaves the vacant lands which are not producing one cent in revenue in the hands of owners who are not able to meet their obligations. On the other hand, the taxes are an ever-increasing quantity, with interest added. In all but perhaps one city in Ontario 10 per cent. is compounded annually (this means that in seven years the amount of taxes doubles itself). The taxes run in arrear very rapidly; then comes the tax sale, with its added costs in connection with selling. So one can easily see that if the arrears of taxes on land are not paid promptly, the land, so to speak, will be eaten up with taxes.

The selling of lands for arrears of taxes is rather a slow process. It is much quicker to take advantage of the section in the assessment act, which allows a municipality to sue for taxes. Any amount from $200 down can be sued through the Division Court, larger amounts would have to go to a higher court. A great many taxpayers will deny themselves in other ways to pay taxes promptly, rather than go to court, besides it makes it much cheaper for them in the end. This always catches the owner who is not particular whether the little strip of land is cut off his property or not, and let me here remark, that this little strip is a nuisance to the municipality, as a purchaser only buys it to squeeze the original owner for the sake of profit in reselling it, or failing that, to place some nuisance thereon to annoy him until he gets his price. Failing in this, he could abandon it with his taxes again in arrear, and give the municipality the trouble, time after time, of selling it.

I make this little digression from my main subject, as I think the better way would be to sell the whole parcel or lot, and after deducting the taxes due, return the difference to the original owner. Besides, the very good reason for getting the taxes paid promptly by suing for same, it gives the municipality a better standing in the eyes of investors to know that taxes are well met, and that tax sales are a rarity.

Non-Resident Owners Hard to Reach.

It seems to me only fair that men who own vacant lands and are serving their country overseas, should not have their lands sold for taxes while they are away and cannot look after them. It is rather difficult for a treasurer to know this for non-residents, and under these circumstances it would work a hardship to the owner. It might be better for the municipality to bear patiently with the taxpayer who, through unavoidable circumstances, chiefly caused by the war, is unable to meet the taxes in arrear. Of course, each individual case should be taken up very carefully and all the circumstances considered. If the municipality would pass a by-law compelling all the owners of tillable lands to put them under cultivation until the war is over, rather than sacrifice properties in a declining market, this would not only be a benefit to the unfortunate taxpayer but to the allied cause.

Another convenience to all parties concerned would be to have a by-law, or the assessment act make provision, to compel all owners of vacant lands to put up a sign-board with the name and address of the owner, or any subsequent address, also the number and size of the lot, the assessors in making their rounds would have everything convenient to set down in their field books this information. This would enable the tax collectors to send bills to the proper owners. As it is now the assessors are merely jumping at conclusions in such cases. It is true they can make a search in the registry office of the district, but this takes time and with busy assessors is not popular. The consequence is that tax collectors do not bill non-residents, and, in fact, do not know where to find them. This necessitates selling the land when in arrears, when the taxes could have been previously collected by proper billing and notification, or the courts resorted to where the parties were able to pay, but not willing for reasons known to themselves.

There is another section in the assessment act which allows a municipality to issue debentures on the strength of its arrears of taxes, and the taxes when collected would be applied to the redemption of the debt thus created. This expedient might be resorted to, but unless there is a large amount of arrears owing, it would hardly be necessary to create a debt generally, to take care of specific debts, especially when the interest rate on borrowings runs so high.

WORKMEN'S COMPENSATION IN ONTARIO

The total number of accidents reported to the Workmen's Compensation Board of Ontario for the four months ended April 30th, 1918, was 14,648, of which 155 were fatal cases. Schedule one industries contributed 12,063, 94 being fatal cases; schedule two contributed 2,430, 61 being fatal cases.

The figures for the corresponding four months of the year 1917 were: Total accidents reported, 10,536, of which 160 were fatal cases. Of these, 8,697 were in schedule one industries, 113 being fatal cases, and 1,679 were in schedule two, 47 being fatal cases.

The total amount of compensation awarded during the first four months of 1918 was $1,097,362.67, $746,974.45 being in schedule one and $450,388.22 in schedule two, being an average of $10,974 a day. The amount paid for medical aid during the four months was $115,004.17, being an average of $1,150 a day.

CLEAVAGE IN CANADIAN CAR AND FOUNDRY COMPANY

Effort is Being Made to Wrest Control from Present Management

On the sixth instant a circular was addressed to the shareholders of the Canadian Car and Foundry Company by a group of shareholders, requesting support at the coming annual meeting on July 15th. This "shareholders committee" consisted of L. G. Beaubien and Michael Connolly of Montreal, and Willard H. Jones, H. R. Hillard, and William A. Shakman of New York.

The circular referred to the fact that dividends had been suspended for some years, and that an unprofitable investment had been experienced, in the face of the fact that large war contracts had been secured by the company, and there was every reason to expect profitable results. At the last annual meeting a minority of the shareholders, representing, according to the circular, over $2,000,000 of stock, had elected to the directorate Mr. A. Hicks Lawrence, with a view to carrying out an investigation into the affairs of the company. They now point out that the management and the heads of the different departments have refused him access to the records necessary for this examination. The circular also states that the company omitted to take any physical inventory of the property up to the year 1917, and that there has been a lack of management throughout. Moreover, the management entered into an agreement with the president to share with him the profits of Russian shell contracts, and if these had resulted as anticipated, his share would have amounted to $5,000,000. Large commissions were, it is affirmed, also paid in connection with securing war contracts, and a bonus of $50,000 in cash was paid to the president for endorsing a note of one of the subsidiary companies, to the amount of $400,000.

The committee states that it has attempted to secure the desired information, etc., from the management, but have not received satisfactory replies. They accordingly request the assistance of the shareholders in securing a majority on the board of directors of the company.

Reply of the Directors.

A reply, signed by the members of the board, with the exception of Mr. Lawrence, appeared on the 10th instant. It is pointed out that the holdings of the members of the "committee" are only slightly over 6 per cent. of the capital; that Mr. Lawrence, since his election to the board, has maintained a position of continuous opposition to practically all the measures advocated by the other members, including the shipbuilding programme. It is also stated that every facility for obtaining information has been given to Mr. Lawrence, but it is also pointed out that there are certain statements and data, which it is impossible for a company, carrying on a war munitions business, to permit even a director to take out of its possession.

The directors point out that a system of continuous inventories has been maintained since the incorporation of the company in 1909, and in 1917 Messrs. Price, Waterhouse and Company, the company's auditors, made a complete inventory of the physical property, and found that the actual values of materials on hand were considerably greater than the amounts carried on the books.

Regarding the Russian shell contracts, the following statement is made:—

The Russian Shell Contracts.

"The directors felt that, as the Russian shell contracts were of an unusual nature, and their successful performance would necessarily involve great exertions on the part of the officers and staff of the company, as well as the active assistance of others, it was in the best interests of the company, and in accordance with well-established practice among industrial corporations, that some profit-sharing plan should be adopted, whereby, in the event of the profits derived by the company from these contracts proving as large as it was then anticipated, the officers and members of the staff and others assisting in the performance of the contracts would receive from the company, out of such profits, special compensation for their services. It was thought desirable that the shareholders should have an opportunity of discussing such a plan; and, for this purpose, a resolution for submission to the shareholders was adopted by the directors, providing that one-half of any profits in excess of five million dollars, which might be derived by the company from the contracts, should be paid to the president, the intention being that the president should distribute, or apportion, any amounts so received amongst the officers and such members of the staff and others as were, in his opinion, entitled to participate therein, as the result of services rendered.

"This resolution, being expressly subject to the approval of the shareholders of the company, of course, remained inoperative, otherwise than as a mere suggestion or recommendation by the directors, until sanctioned by the shareholders. Such sanction could only have been given at a special general meeting of shareholders called to consider the plan proposed, and of this meeting due notice would have been necessary.

"The shareholders were, however, not asked to sanction the proposed arrangement. The resolution was never acted upon, and was, in fact, on the suggestion of the president, rescinded in March, 1916. No further action has been taken in respect to the matter. As the minute book has at all times been open to Mr. Lawrence, he, and his associates, the signers of the circulars in question, must have had knowledge of these facts. A full and frank statement evidently did not suit their purposes.

Payment of Commissions Essential.

"The payment of certain commissions was a necessary part of the expenditure of the company, in acquiring the Russian shell contracts. Had the original estimates of profits been sustained these commissions would have appeared reasonable to any business man engaged, at that time, in foreign contracts for war munitions. It is entirely due to the efforts of the president that the commissions were subsequently reduced to a basis which allowed your company to emerge from these shell contracts with a profit. Disclosure and publicity of the various questions arising in connection with such matters would have prevented your president from effecting the compromises he has made for the benefit of the shareholders.

Endorsement by the President.

"In the years 1915 and 1916, when, due to war conditions, the company's finances were in a serious condition, the banks refused to make further advances to it, unless the repayment of such advances was guaranteed by Senator Curry. Cessation, at the time, of necessary banking assistance, would, without question, have resulted in the suspension of the company's operations. Under these circumstances, Senator Curry, without security to himself, did, in fact, guarantee advances aggregating very large amounts; and, by so doing, undoubtedly saved the company from very serious consequences.

"In the fall of 1917, one of your subsidiary companies (Canadian Steel Foundries, Limited), which was engaged in the execution of extensive war contracts, was refused further necessary advances by its bankers, unless the repayment of such advances was personally guaranteed in the same way, by Senator Curry. This guarantee was given in respect to advances aggregating over $400,000. Canadian Steel Foundries, Limited, was thereby enabled to continue its operations. This guarantee was so given, in December, 1917, prior to the date of the last annual report, and not subsequently thereto, as the circular falsely states. It is in full effect at this date. It must further be remembered that the finances of both companies were then in a very different condition from that existing to-day.

"There can be no question that the assistance of Senator Curry in these matters was of incalculable value to the company and its shareholders. The nature of the guarantees involved serious personal risk to Senator Curry, having regard to the then position of the company and of Canadian Steel Foundries, Limited.

"The assumption of a risk of this nature is, in no sense, a part of the duties of the president of a company. The directors felt, and still feel, that the services rendered by Senator Curry in giving these personal guarantees were of a special nature, entitling him to special compensation. They accordingly fixed that compensation at the sum of fifty thousand dollars, as remuneration for his special services, and for having personally guaranteed obligations of the company and of its subsidiary, Canadian Steel Foundries, Limited,

VICTORIA INDUSTRIALLY IN 1918

City is Benefiting by Demand for Ships—Tourist Trade Growing

BY C. L. ARMSTRONG

To be the "farthest west" city in Canada is no joke when it comes to the business of seeking to attract the attention of manufacturers with a view to interesting them in branch plants. Victoria, capital city of British Columbia, built on the site selected by the best brains among the Hudson's Bay Company's field executives as the most advantageous distributing centre for the vast territory to be served, after the fixing of the forty-ninth parallel upset the company's map —Victoria, the lovely "City that is Different," wants industries, wants warehouses, and means to get them. But, with a continent behind her and an ocean before, she finds the task of riveting the attention of Canadian industrialists, engrossed in the resources of the effete east and the vast markets of the middle west, on her advantages not dissimilar from that of the earnest young Tommy, who sought to put a Fritz machine gun out of action by throwing mud at the concrete emplacement. But, just as the same earnest Tommy eventually created a most decided impression by tossing a Mills No. 5 through the sighting-slit, so Victoria will one day cause manufacturers and distributors to wake up to her location with a loud and resounding bang!

Enthusiasm for Steel Development.

Last mid-winter the entertainment committee of the Rotary Club of Victoria, which, as all Rotary Clubs are, or should be, is a very much alive organization, introduced at one of its luncheons in the Empress Hotel a talk by one of its members on the iron resources of Vancouver Island, the large and potentially wealthy island, upon which Victoria is by far the largest centre. The talk was no sooner concluded than it became apparent that a wire fairly sizzling with current had been touched, and sparks began to fly in every direction. There was a demand for more luncheons devoted wholly to a consideration of the same subject. A series of three was required, and at the third a representative committee was struck. This committee, contrary to the unwritten rules which appear to regulate most committees, went out straightaway and started something. They started it so quickly and so thoroughly that within a week the matter had grown to such proportions that the Rotary Club felt it would be impolitic to seek to keep it to themselves. The result was the formation of the Central Iron Committee of Vancouver Island, drawing its membership from all parts of the island, and having for its purpose the exploitation of one of the world's greatest reservoirs of high-grade magnetite at a time when the entire anti-Germanic world cried aloud for steel.

Shortly, the live wires in Vancouver city and other communities on the mainland became fired with the spark which emanated from Victoria, and added their heat of enthusiasm to the energy flowing from the surcharged cables of the Vancouver Island committee. Some thousands of dollars were raised for campaign work; the most complete authentic reports yet published were collated and put out, showing exactly what Vancouver Island possesses in iron resources and what may be found in other parts of British Columbia; influential deputations were sent to the provincial government and then to the federal government at Ottawa. The latter delegates have not yet returned, but to date the net results have been the passing of remedial legislation by the provincial government, protecting British Columbian deposits from unfriendly outside influence; a provincial bonus on both pig-iron and steel; and the offer of the federal government to take the entire output of any British Columbia plant or plants for a period of three years, and the assurance that speedily much solid development will take place.

Just where Victoria will figure in the development of the iron and steel industry of British Columbia remains, of course, to be demonstrated, but when it is considered that a very large percentage of the known high-grade iron deposits, not alone of the province, but of the entire international Pacific North-west, are to be found on Vancouver Island and adjacent islands, it is quite conceivable that Victoria will not be entirely missing when the benefits are passed around.

Vancouver Island possesses, besides the ore, high-grade fluxes and ample deposits of coking coal; Victoria stands at the real gateway to the vast markets of Japan, China, South America, India, Australia and New Zealand, and has, besides, magnificent new deep-water docks and warehouse sites, built at a cost of several millions of dollars. The iron and steel industry, as is well known, is the grand-daddy of all industries and owns about fifty-seven varieties of dependents. Victoria is confident of the future where steel products are concerned.

Excellent Progress in Shipbuilding.

Looking the immediate present squarely in the face, Victoria finds herself benefiting materially by the shipbuilding programme. For many years—long before Von Tirpitz set his submarines to creep up on mercantile craft and strike them with a cloven hoof, like a snake in the grass (as an Irish friend recently described it)—believers in Victoria's destiny pointed to her manifold advantages as a shipbuilding centre. The demand for ships to beat the submarine campaign has afforded the capital city her chance, and she has fairly grasped it. Ideal locations on the old Indian Reserve, purchased a few years ago and laid out as union railroad terminals and industrial sites, have been seized upon by makers of craft, and a large programme, embracing both schooners and steamers of wood is being carried out. Labor difficulties, concerning which much has been heard in the east, have been no more marked than elsewhere, and, whilst the workers have insisted firmly upon good, substantial wages, the work has gone forward with eminent satisfaction.

Now that the demand for wooden ships is giving place to a more particularized demand for steel construction, Victoria is again in the field, and plans are on foot for the formation of a company to build steel craft, contracts for which have already been secured.

Lumber and Trade.

The demand for lumber has kept the great mills of Victoria working night and day, and, besides the material for ship construction and airplane needs, much has been made available for export.

Victorians interested have been keeping closely in touch with the rapid development of the use of concrete for ships of large tonnage, and there is keen interest in the impending voyage of the SS. "Faith" to this coast from San Francisco with her first cargo, made up of salt. Plans have already been secured for large craft of concrete, and before the year is out it is expected that steps will have been taken to put these plans to the test, for Victoria possesses, besides ample and ideal locations, two of the largest cement plants in Canada, turning out a product, the quality of which is peculiarly suited to the needs of concrete ship construction.

Much might be said for several smaller industries in Victoria, some of them much out of the ordinary. One might refer to the small plant which has been making bottles from locally-found silica, using a new furnace, locally invented; one might tell of the struggling young industry in a small tannery in Victoria, where an ex-fur-sealer and an English tanner and glover are making wonderful gloves from the hides of sea lions; one might picture the success of local jam-makers and fruit-canners, starting, in a small way, to take advantage of the wonderful opportunities afforded by the rapidly-growing fruit areas at Victoria's door; one might describe the plant so carefully perfected and built where potash is being recovered from the seaweed which strews our shores—but these are only portents of what is to come when Victoria ceases to be a closed book to those whose help is needed.

City Attracts Many Tourists.

No reference to Victoria's industries or possible industries would be complete without mention of what must always be one of the very greatest and most productive—the tourist industry. Victoria has invested, wisely, a good deal of money in building up this industry, but merely a fraction of what she could, with excellent judgment and perfect safety, invest. The remarkable beauty and charm of Victoria and Vancouver Island, although world-famous, are only just beginning to be known. Winter and summer, Victoria offers the finest year-around climate to be found in North America and one of the best in the world. Unlike other well-known localities, Victoria enjoys a sufficient change of seasons to provide the spice which, when lacking, causes any climate to pall. Never very hot, never very cold, with an unusual amount of bright sunshine and comparatively little rain during the winter, Victoria offers an almost ideal climate for twelve months in the year. Golf the year round; roses in the open garden at Christmas; golden English broom, real berried holly, gorse, box and many other distinctively Old World flora; glorious diversified scenery; a wealth of sport near at hand—these

and other attractions are drawing each year more and more visitors from the ends of the earth. Lately, Anglo-Orientals in China and Japan have "discovered" Victoria, and the past two summers have witnessed a great and welcome influx of them. They spend the summer months and put their children to school in Victoria. Then the parents return to the Orient and leave the youngsters with us for education. This season the Victoria and Island Development Association—the civic industrial and publicity bureau of Victoria—has inaugurated a special advertising campaign in China to reach Europeans resident there, and has issued a special illustrated folder for their information.

Hundreds of motorists from mid-western Canada and the United States tour Vancouver Island annually, and the number continues always to increase. Last winter witnessed several thousands of Canadian prairie farmers and their families seeking recreation in Victoria and other coast resorts, and last summer many hundreds of non-motorist visitors spent vacations in the lovely city.

The outlook for the coming summer season was never brighter, despite many discouraging influences begotten of war conditions. Battalions of weary war-workers will spend vacations in Victoria and on Vancouver Island generally, securing fresh vitality and new vim, so necessary to the morale of the army at home. Victoria will also be the setting this year for the annual convention of the Union of Canadian Municipalities and other sizable conventions.

The tourist industry, like many other industries, is susceptible of broad development in Victoria. Organized efforts to concentrate the traffic and to lengthen the average individual visit by means of properly systematized entertainment, thereby pleasing the customer and at the same time developing two shekels where but one is developed now—these are refinements still to come. One need not look very far to the southward to observe the value of organized tourist industry Victoria possesses all of the necessary "raw material." Capitalists, seeking worth-while investments, should investigate.

CITY OF REGINA FINANCES

The annual report of the city of Regina for the year ended December 31st, 1917, has just been published. The result of the operations for the year was a deficit of $14,117, which is, however, more than accounted for by the fact that a loss is recorded from the utilities instead of a surplus, as was anticipated when the estimates were prepared. None of the utilities, in fact, achieved the results anticipated.

The chartered accountants, Messrs. Gladwell, Wilson and Company, in their report expressed the opinion that the details in connection with the tax sales, including the collections for redemptions, etc., should be part of the duties of the department responsible for the collection of taxes. At present there is divided responsibility, and their suggestion would tend to greater efficiency, and consequently less in the possibility of arrears in the handling of this matter.

Included in the amount shown as arrears of taxes are a number of business and income taxes, some dating as far back as 1912, and which are considered uncollectable. The list of these is being prepared by the assessor. If cancellation is decided upon, the amount will have to be levied otherwise.

The total debenture debt of the city is now $10,526,087 and the total capital liabilities are $16,359,243. In addition to this there are revenue liabilities to the amount of $1,434,881. The result of the operations to the public utilities for the year was as follows:—

	Actual deficit for year.
Street railway net deficit	$63,898
Electric light and power net deficit	10,494
	$74,393
	Actual surplus for year.
Electric light and power taxes	$34,500
Waterworks department, net surplus	5,734
Property sales contribution for street railway sinking fund	20,574
	$60,809
Balance net deficit carried to general revenue and expenditure account	13,583
	$74,393

FIRES ON RAILWAYS

Government Railways Should Be Under Regulations of Railway Commission

"The requirements of the Board of Railway Commissioners have been well observed on the whole and the loss to our forests for which the railways can be held responsible is but a small fraction of the total fire loss," stated Sir Clifford Sifton at the ninth annual meeting of the Commission of Conservation. "This, as compared with the situation ten years ago," he continued, "is an improvement of the first magnitude. I should here explain that we secured the adoption of legislation by which the Board of Railway Commissioners was authorized to impose fire protection measures upon the railways, and we then assisted the board in drafting the regulations. When these were adopted, the board appointed our chief forester as its chief inspector in the enforcement of fire protection regulations for all the privately owned railways of Canada. The jurisdiction of the Railway Commission now extends to approximately 85 per cent. of the railway mileage of Canada.

"There are still 4,087 miles of Dominion government railways and 350 miles of provincially chartered railways in Alberta not subject to regulation and inspection by the Railway Commission, and the fire prevention service applicable to these two classes is not comparable to that applied under the Board of Railway Commissioners. The minister of railways has, so far, declined to take the progressive and effective step of adopting the regulations of the Board of Railway Commissioners in full and putting their enforcement in charge of our chief forester, unquestionably the best qualified man in Canada for the work. We trust this will soon be done. The situation at the present time, is therefore, that the parliament of Canada, in its zeal for the public good, requires all privately owned railways, such as the Canadian Pacific Railway, the Canadian Northern Railway and the Grand Trunk Railway, to submit to the regulations which are imposed for the public good by the Board of Railway Commissioners, but they will not allow the Intercolonial Railway, which they themselves own and manage, to be put under those regulations. The result is, that on the government's own railway the fire protective service is the worst that we have in Canada. Urgent necessity exists for dealing with the northern railways in Alberta, and it is to be hoped that the government of that province will fall in line with the progressive spirit which has been adopted throughout the remaining portions of Canada."

MERCHANTS BANK ANNUAL REPORT

The annual report of the Merchants Bank of Canada for the year ended April 30th, 1918, appears in this issue. The principal features of the report were mentioned in our issue of May 31st The total profits for the year are $1,657,973, and, next to the dividends at 10 per cent. of $700,000, the largest item of appropriation is $400,000 transferred to the contingent fund. The deposits show a very satisfactory increase, being greater by about 20 per cent. than for the year 1917.

The assets now total $140,937,544, which is a new high record in the bank's history. The bank handled subscriptions to the Victory Loan totalling $25,000,000, and its own holdings of government securities have increased by over $1,500,000. The government tax on net circulation amounted to $70,000, and the bank also contributed $50,000 to the officers' pension fund.

At the annual meeting Mr. R. W. Blackwell, vice-president, who occupied the chair in the absence of the president, Sir Montagu Allan, referred to the continuous agitation against the so-called vested interests. He emphasized the fact that the resources of any large bank belong mainly to its depositors, its own capital being, comparatively speaking, quite insignificant. Its depositors do not belong to any one particular class, and the bank is, in a sense, a trustee of millions of dollars belonging to all classes.

Mr. E. F. Hebden, managing director, referred to the important position held by the chartered banks of Canada. "There is," he said, "no more important part of the civil arm than the chartered banks. I say it without the possibility of the statement being gainsaid, that the chartered banks of Canada have been a pile-driving influence from Confederation on, notwithstanding some setbacks to themselves in the development of Canada's material resources in every field of enterprise."

The same directorate was elected for the coming year.

SASKATCHEWAN MORTGAGE ASSOCIATION

Success Has Been Attained in Legislative Efforts — Uniformity With Other Provinces

The fourth annual general meeting of the Land Mortgage Companies' Association of Saskatchewan was held in Regina on May 7th, 1918. The report of the executive committee on amendments to legislation was as follows:—

Report on Legislation.

"(1) Pre-emptions and purchased homesteads.—Many good investments are barred in Saskatchewan and much farm credit rendered unavailable by the existing regulations under the Dominion Lands Act. Your executive have exerted their influence during the past year to remedy this situation, and with the able co-operation of the Dominion Association have suggested amendments to the act which will enable entrants for pre-emptions and purchased homesteads to borrow money on the security of such lands after the duties have been performed, and before the issue of patents. This matter is under the consideration of the Federal government and has had its third reading. It is now before the Senate.

"(2) Volunteers and Reservists Relief Act.—This has been amended (Chap. 59, 1917, second session), as follows:—

"(a) The protection of the Act extends to soldiers discharged at any time after leaving Canada, for one year after the date of discharge.

"(b) Where a soldier is or has been discharged before leaving Canada, the protection of the act ceases from the date of discharge.

"(c) In the case of soldiers who have been killed or have died while on active service, the protection of the act extends for one year from the date of death, and in case of decease prior to the 15th of December, 1917, extends for one year from that date."

"(3) Trust Company Act.—This act now appears on the provincial statutes. It is not by any means perfect and offers opportunities for future legislative committees of this association.

"(4) Loan Company Act.—The government decided not to introduce this act at the last session.

"(5) Priority of Mortgage Over Relief Liens.—By order-in-council dated the 23rd of February, 1918, the minister recommends—

"'That in case of sale or of foreclosure and sale by such mortgagee or encumbrancee, the minister may, upon being satisfied that such mortgagee or encumbrancee has taken every reasonable and proper means to procure the highest price for the said land and has suffered loss by reason of liens so registered, issue such discharge or partial discharge as to the land sold as will relieve such mortgagee or encumbrancee of loss in the case of liens for seed grain and fodder, beyond the amount thereof applied on such land with interest, and in the case of relief, wholly or to such extent as the minister deems equitable.'

"The Saskatchewan Association desires to be placed on record as being opposed to anything less than the original intention of the Department of the Interior when the legislation relating to relief liens was under discussion, namely, that relief liens should not be a charge on lands in priority to other registered encumbrances and that apportionment should be made upon application.

"(6) Attornment Clause.—Owing to adverse legal decisions, it was determined to apply for such amendment to the Land Titles Act as would restore the effectiveness of the attornment clause. We are pleased to report that the necessary changes were made at the last session.

"(7) Arrears of Taxes.—This act has been amended and it is now necessary, in addition to the notice already provided for, that properties be advertised in detail once in the 'Saskatchewan Gazette' as well as once in a local newspaper.

"(8) Registered Power of Attorney.—Provision was made by amendment to the Land Titles Act whereby a certified copy of power of attorney could be registered.

"(9) Lunatics' Estates.—An objectionable amendment was proposed in this connection, giving the official administrator of lunatics' estates, the right to charge any advances made by him on behalf of the government, against the estate of the lunatic, such advances to take priority over all existing claims. On taking this up with the government the priority clause was eliminated.

"(10) Wild Lands Tax and Surtax.—The surtax on uncultivated lands, which was limited to $10 per quarter section or $40 per section, has been repealed and replaced by the wild lands tax. The new tax will be on the basis of 1 per cent. of the assessed value, which will mean a very material increase in taxes, and in the provincial revenues. This will not be of material interest to our mortgage lending companies, very few of whom lend on unimproved or wild land, but the item will no doubt be of considerable interest to many of the trust companies, who are members of our association.

"(11) Corporations Taxation Act.—There were also amendments to the Corporations Taxation Act, one of which provides that monies loaned by loaning companies or trust companies, 'upon municipal or school bonds or debentures, or upon the bonds or debentures of any other local or public authority in Saskatchewan,'' shall not be liable to the annual tax of 40 cents for each $1,000 of the funds under investment in Saskatchewan."

Report of the Executive Committee.

The president, Mr. W. E. Mason, then addressed the meeting as follows:—

"In laying before you the fourth annual report, your executive again record a year of forward movement and legislative reform. We were favored last May with a visit from Mr. Appleton, secretary-treasurer, of the Dominion Mortgage and Investments Association. Many matters relating to the well-being of the mortgage lending companies were discussed with him at that time, which have since borne fruit in the form of remedial legislation. We are fortunate this year in having Mr. Appleton with us at our annual meeting. He has visited other western associations, attending their meetings, and by thus keeping in touch with the many questions confronting the lending companies of the different provinces, all the local associations profit by his experience.

"Bulletin Reports.—Your executive during the past year have had the usual number of perplexing questions to consider and deal with. You have been kept closely informed on these matters through bulletins issued by the Dominion Association, which has become the clearing house for the provincial associations. Each association sends an outline of their work which is passed back in bulletin form to each member, thus enabling us to see the difficulties encountered in our sister provinces. Through this medium we are forewarned and may become forearmed against possible adverse legislation, and are better able to cope with the difficulties as they arise. Having had the bulletins before you, it is only necessary to enumerate the matters that have had the special attention of our executive during the past year. These have been reviewed in the secretary's report.

"Position of Saskatchewan.—Mr. A. L. Crossin, of the firm of Oldfield, Kirby and Gardner, contributed a paper at the annual meeting of the Dominion Mortgage Association held in Toronto on the 25th of March last. He dealt with western legislation relating to mortgage companies, and in referring to the work accomplished by the three prairie province associations, he said:—'That the work has borne fruit is evidenced by the undoubted fact that Saskatchewan, which for several years has had the doubtful honor of the most objectionable legislation, has so recast its measures, that this province has now on the whole the most useful and fairest legislation governing the relations of borrowers and lenders. The experience of Saskatchewan is suggestive and should be an example to the other provinces.'

"The Joint Committee of Commerce and Agriculture held their session in Regina on the 13th and 14th of March. This committee is responsible for better understanding between the borrowing and lending interests in the west. Farmers now appreciate that their credit is improved through the amended legislation for which the mortgage associations are directly responsible. The following matters in which loaning interests are concerned were considered.

"Financial Assistance to Homesteaders.—(1) A paper by Mr. Vere C. Brown on the subject of 'Financial Assistance to Homesteaders without Patent,' resulted in the following motion:—

"'Whereas it has been brought to the notice of the joint committee of commerce and agriculture now in session that it is the intention of the Federal government to introduce a bill amending the Dominion Lands Act, in such manner as to enable entrants for pre-emptions and purchased homesteads to borrow money on the security of the said lands after the

duties have been performed and before the issue of patent thereto.'

"'Therefore be it resolved:—(a) That this committee unanimously endorses the proposed action of the government in this respect. (b) That a copy of this resolution be forwarded to the minister of the interior.'

"Advances for Increasing Areas Under Production.—(2) A suggestion eminating from the Dominion government to advance monies to farmers in the prairie provinces for the purpose of increasing the amount of their cultivation, was brought to the attention of the meeting by Mr. F. H. Auld, deputy minister of agriculture, and resulted in the following motion:—

"'Whereas the Dominion government has signified its willingness to advance to the provincial governments monies to be loaned to farmers for breaking land so that production may be increased for 1919.

"'Therefore be it resolved:—That the joint committee of commerce and agriculture offer to the minister of agriculture for the province of Saskatchewan, the suggestion that he call a conference of representatives of the governments of the three prairie provinces, the Canadian Council of Agriculture and the Mortgage Loans Association, to consider plans for distributing these monies for the purpose designed.'

"The Dominion Association has taken this matter up with the acting minister of finance at Ottawa and received from him the following letter:—

"'Dear Sir,—I beg to acknowledge receipt of your letter of the 20th instant in reference to the subject matter of proposed advances to farmers. The government has not yet decided to embark upon any such policy, so in the meantime, there is nothing further I can say in reply to your letter. However, I beg to thank you for your assurance that the government can rely on the co-operation of institutions such as your own in carrying out any reasonable plan for providing facilities for the raising of larger crops in the future. If the government should conclude any policy in respect to this matter, I shall be pleased to advise you promptly.

"'Yours truly,
"'A. K. McLean,
"'Acting Minister of Finance.

"'Ottawa, March 21st, 1918.'

"Uniformity of Provincial Legislation.—(3) A paper was read by Mr. W. S. Fallis dealing with uniformity of provincial legislation. The following motion was unanimously adopted:—

"'Whereas it is desirable that there should be a uniformity of provincial legislation throughout Canada.

"'Therefore be it resolved:—That the joint committee of commerce and agriculture representing all classes of the community recommends the passage of the draft bill proposed to be submitted to the legislatures of the provinces to provide for the appointment of commissioners for the promotion of uniformity of legislation in Canada.'

"The secretary's report covers the amended legislation that has engaged the attention of your executive. In addition to this, as in former years, your legislative committee kept constant vigil during the sitting of the House. Our solicitor scans carefully every bill introduced and warns us of impending trouble (as all bills affecting our interests are not labelled in red letters or heralded from the house top). This is work of a negative character which is in many instances as important as positive legislation appearing on the records.

"Mr. Bradshaw's Resignation.—We regret to record the resignation of our late secretary, Mr. G. H. Bradshaw, of the Sterling Loan and Securities Company. Mr. Bradshaw has always taken a keen interest in the affairs of our Association. Our best wishes go with him in his new sphere of activities.

"I have pleasure in moving that the secretary's report be adopted and that the same be printed and copies sent to the members of this association in such manner as may be hereafter determined."

Discussion then followed, Mr. Givins considered the members should discuss freely the reports. Mr. Styles drew attention to the procedure regarding the sale of land for taxes, and the improvement as to advertising of lands for sale. Attention was drawn to the improvement in the law as to the attornment clause. On the motion being put to the meeting to adopt the reports, it was declared carried.

It was moved by H. W. Givins, seconded by W. G. Styles: "That Section 4 of Article No. 2 of the by-law of the association be amended by striking out the word 'four' in the third line and substituting therefor the word 'six.'" Carried.

It was moved by W. G. Styles and Lorne Johnson: "That Article No. 1 of the by-laws be amended by adding after the word 'Companies' the words 'or Mortgage Loan Association.'" The motion was declared carried.

Mr. John Appleton was then requested to address the meeting.

On motion by H. W. Givins and C. M. Johnson, it was resolved: "That this meeting approve of the suggestion of the secretary of the Dominion Mortgage and Investments Association that the annual report of the association be printed with the reports of similar associations and authorize the executive committee to make all necessary arrangements in connections therewith."

On motion of W. G. Styles and H. W. Givins, it was resolved: "That this association approve of the request from the Dominion Association to amend their by-laws and hereby authorize the executive of this association to consider such amendments as may be submitted to them with full power to deal with same and notify the Dominion Association of their decision on these proposed amendments."

The election of officers was then proceeded with and resulted as follows:—President, W. E. Mason; vice-presidents, H. W. Givins and C. M. Johnson; secretary-treasurer, Geo. S. Gamble. Executive committee, Messrs. J. E. Adams, W. G. Styles, John Rogers, L. Johnson, Don. Fraser, W. J. Rattray.

Mr. J. Appleton acted as scrutineer and announced the result of the election.

On motion of W. G. Styles and J. E. Adams, it was resolved: "That when this meeting adjourn that we do so to meet again one week previous to the next session of the Saskatchewan legislature, or at such other time as the president may call a general meeting." Carried.

On motion of H. W. Givins and Don. Fraser, the meeting adjourned.

COST OF INSURANCE REPORTS

Mr. G. D. Finlayson, superintendent of insurance for the Dominion of Canada, is calling the attention of insurance companies to the cost of the insurance reports, which has increased greatly. The expense is, of course, borne ultimately by the companies and not by the government, and suggestions from the companies are requested with a view to reducing the cost. During the past five years the cost of the reports has been as follows:—

Reports for business of year.	No. of copies. Volume I.	Volume II.	Cost.
1912	4,700	5,000	$ 7,414
1913	5,600	5,300	9,225
1914	6,100	5,300	9,268
1915	6,500	5,500	13,222
1916	7,300	6,000	14,147

The increase is partly due to the larger number distributed, but more especially to the increase in the cost of labor and materials entering into the work of printing and binding. Mr. Finlayson suggests that some expense might be eliminated by leaving out portions of the contents, or by reducing the number of copies distributed. At the present time all companies are asked each year for a list of agents to whom they wish one or more copies of the report to be sent. As a rule, the distribution is made from the lists received, but in some cases the numbers asked for appear to be unreasonable and the lists are cut down. The numbers requested are not always proportional to the size of the companies, and, in fact, are sometimes in inverse ratio. One remedy suggested is that the distribution should be in proportion to the net premium income of the companies, with a minimum allotment of two or three copies to each company, or, as an alternative, to supply to each company the minimum allotment and to make a nominal charge for additional copies supplied.

An announcement was recently made that the contract for the construction of the section of the Hanna Medicine Hat Branch of the Canadian Northern Railway, from Hanna to the Red Deer River, has been awarded to W. A. Dutton, of Winnipeg. The Hon. Arthur Sifton, who has strongly urged the building of this line to help market this year's crop, is hopeful that it will be completed in sufficient time, as the farmers are ready to supply nearly all the labor and teams required for the work.

The Merchants Bank of Canada

Proceedings of the Fifty-Fifth Annual Meeting of Shareholders on June 5th, 1918

The fifty-fifth Annual Meeting of the Shareholders of the Merchants Bank of Canada was held on Wednesday, June 5th, in the Board Room at the Head Office of the Bank at Montreal. The meeting was called to order at twelve o'clock noon.

On motion of Mr. John Patterson, the Vice-President, Mr. K. W. Blackwell, in the absence of the President (Sir H. Montagu Allan), was asked to take the chair.

Mr. J. M. Kilbourn was appointed Secretary of the meeting.

The minutes of the last annual meeting were taken as read.

The Chairman, Mr. K. W. Blackwell, then presented the Annual Report, as follows:—

It is my privilege to submit for your approval the Fifty-fifth Annual Statement of the Merchants Bank of Canada as at the close of business on the evening of the 30th April, 1918, the last day of the Bank's fiscal year, accompanied by a statement of the Profits covering the same period.

You will observe, with satisfaction, I doubt not, that the profits as a result of the year's operations amount to $1,236,680.96, being an increase over last year of $116,372.12.

Subscriptions by the Bank's clientele throughout the country to that important piece of national financing, know as the Victory Loan, amounted to no less a sum than $25,000,000, distributed amongst fifty-three thousand depositors. Notwithstanding the heavy consequent withdrawals, our deposits have grown about $20,000,000, or roughly, twenty-one per cent. Our commercial advances have correspondingly increased, thus enabling us, while maintaining a proper measure of liquid strength, to materially improve our earning power.

The whole position as reflected by the Balance Sheet will be viewed, I am sure, with feelings of entire satisfaction.

There has been no activity during the course of the year in branch extensions, owing to the exigencies of the staff situation. Indeed, we are, in all the circumstances, doing well to keep pace with the development of our business under the difficulties by which we are surrounded in this respect.

All the various offices have been inspected during the past twelve months.

The Auditors' certificate is appended.

All of which is respectfully submitted.

K. W. BLACKWELL,
Vice-President.

THE FINANCIAL STATEMENT

Statement of the Result of the Business of the Bank for the Year Ended 30th April, 1918.

The Net Profits of the year, after payment of charges, rebate on discounts, interest on deposits, and making full provision for bad and and doubtful debts, have amounted to......		$1,236,680.96
The balance brought forward from 30th April, 1917, was		421,292.96
Making a total of		$1,657,973.92
This has been disposed of as follows:—		
Dividend No. 120, at the rate of 10 per cent. per annum	$175,000.00	
Dividend No. 121, at the rate of 10 per cent. per annum	175,000.00	
Dividend No. 122, at the rate of 10 per cent. per annum	175,000.00	
Dividend No. 123, at the rate of 10 per cent. per annum	175,000.00	
		$ 700,000.00
Government War Tax on Note Circulation......		70,000.00
Contribution to Officers' Pension Fund		50,000.00
Transferred to Contingent Fund		400,000.00
Balance carried forward		437,973.92
		$1,657,973.92

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

In accordance with the provisions of sub-Sections 19 and 20 of Section 56 of the Bank Act, we report to the shareholders as follows:—

We have examined the above Balance Sheet with the Books of Account and other records at the Chief Office of the Bank and with the signed returns from the Branches and Agencies and have checked the cash and verified the securities of the Bank at the Chief Office against the entries in regard thereto in the books of the Bank at 30th April, 1918, and at a different time during the year and found them to agree with such entries. We also attended at some of the Branches during the year and checked the cash and verified the securities held at the dates of our attendances and found them to agree with the entries in regard thereto in the books of the Bank.

We have obtained all the information and explanations we have required. In our opinion, the transactions of the Bank which have come under our notice have been within the powers of the Bank, and the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

VIVIAN HARCOURT, } Auditors.
GORDON TANSLEY. }
(of the firm of Deloitte, Plender, Griffiths & Co.)

Montreal, 23rd May, 1918.

In moving the adoption of the Report the Chairman, after referring to the features of the Annual Statement, continued, in brief:—

"Some strange doctrines have recently taken possession of the minds of many people on this subject. It is a phase of the war excitements," he said.

"I am enthusiastic on the subject of fair play towards Vested Interests," he continued. "You and I, gentlemen, as bankers, and bank shareholders, are the natural guardians of of Vested Interests.

"We must argue against and oppose the mischevious propaganda of unthinking and illogical people. They will tell you that this is a socialistic age and complain that banks and large capitalists are banded together to keep on amassing wealth to the detriment of the conditions of the general community.

"We may answer this in saying most truthfully that banks themselves are absolutely socialistic in their methods. They accept money from those who have it, and lend it to those who need it and can use it safely.

"The great resources of any large bank belong mainly to its depositors, its own capital being, comparatively speaking, quite insignificant, nor do its depositors belong to any one particular class. It is a careful trustee of millions of dollars belonging to all classes.

"In our case, for example, the large total of our deposits and current accounts belong to so many thousands of individuals that the average holding is only about $500.

"Surely such depositors are not capitalists! Therefore, it would be most unfair to accuse us of being prejudiced in favor of great capitalists.

"The cost of the war is being paid for out of the savings of past years, and is now in some countries nearly approaching the limit of exhaustion, and the question of how interest charges are to be met, engages the deepest attention of all classes. Here again the treatment of Vested Interests must be carefully guarded against unwise and wanton action: when we hear people talk about the conscription of wealth and levy on capital in a vague and indefinite way we realize that this might be pushed to a limit that would break down the whole financial fabric."

He went into a discussion of what so-called conscription of wealth meant and the impossibility of turning property into cash as very little individual wealth was composed of cash.

"Vested Interests," he added, "are also threatened from another quarter. We, in this young country, must guard them against the free trader. I am not going into politics here, but the fact cannot be overlooked that amongst the agricultural community there are many who are favorable to taking down the tariff bars, in order to cheapen articles that enter into their own daily use, without thinking of the consequences, they don't seem to realize that if they disturb the

K. W. BLACKWELL, Vice-President.
E. F. HEBDEN, Managing Director.
D. C. MACAROW, General Manager.

present equilibrium of tax distribution, a greater share of the taxation must undoubtedly fall upon their own shoulders."

He concluded with an appeal to the public for fairer treatment of vested interests.

In seconding the adoption of the Report, Mr. Thomas Long then said:—

It is a great pleasure to me to be invited to second the adoption of the Annual Report, which has been presented by the Vice-President. I am sure that as stock-holders we are all pleased and delighted to see the substantial growth that has taken place within the past few years in the volume of business transacted by this Bank. That this progress it still continuing is apparent by the report we have just heard, so that we may look forward to the future with both hope and confidence. (Applause).

After remarks by Mr. Percival C. Elgee and Mr. R. Campbell Nelles, the Annual Report was unanimously adopted.

Mr. E. F. Hebden, managing-director, addressing the shareholders, stated that a year ago they had looked for the close of the war before another meeting, but in this expectation the world had been disappointed. Meanwhile, the affairs of the bank continue to prosper, stimulated by favorable economic conditions.

Mr. Hebden referred to the important position held by the chartered banks of Canada and said: "There is no more important part of the civil arm than the chartered banks. I say it without the possibility of the statement being gain-said, that the chartered banks of Canada have been a pile-driving influence from Confederation on—notwithstanding some setbacks to themselves—in the development of Canada's material resources in every field of enterprise." (Applause).

Mr. Hebden also referred at length to the very crippling effect the exceedingly heavy military levies upon Banks' staffs are having and will have upon their organizations.

Mr. D. C. Macarow, general manager, reviewed the financial statement and said, in part: "The times through which we are passing are indeed anxious and exacting, and the future unquestionably holds many serious problems, upon the wise solution of which far-reaching issues will depend. But the potentialities of this country are well nigh boundless, and if continued to be developed along sound and businesslike lines, as we have no doubt they will be, the future, I am sure, may be regarded without undue apprehension.

"Economists tell you that the stability and wealth of a country such as ours lies largely in the measure and value of the exportable surplus of our products. Judged by this true standard and in the light of past achievements one will require to be a pessimist indeed to regard our future otherwise than with well-grounded confidence."

Mr. Macarow paid a tribute to the loyalty of the staff to the Bank and to their country, so many of them having laid down their lives in defence of the latter, and those who are debarred from active participation in the war "doing their bit" in taking on additional burdens of work in the Bank to compensate for the shortage in the staff. (Applause).

On motion of Mr. John Patterson, seconded by Mr. A. D. Fraser, Messrs. Vivian Harcourt and Gordon Tansley, of Deloitte, Plender, Griffiths & Company, were appointed auditors of the bank, to hold office until the next annual general meeting.

Messrs. John Patterson and Arthur Browning were by unanimous vote appointed scrutineers, and instructed to cast one ballot for the election of the following persons as directors: Sir H. Montagu Allan and Messrs. K. W. Blackwell, Thomas Long, F. Orr Lewis, Andrew A. Allan, Lieut.-Col. C. C. Ballantyne, A. J. Dawes, F. Howard Wilson, Farquhar

Robertson, Geo. L. Cains, Alfred B. Evans, E. F. Hebden, T. Ahearn and Lieut.-Col. Jas. R. Moodie.

On motion of Messrs. R. Campbell Nelles and John Patterson, a vote of thanks was tendered the Board of Directors, the General Manager and Staff, which was briefly acknowledged by the General Manager, Mr. D. C. Macarow.

This concluded the business of the meeting, which then adjourned.

At the subsequent special meeting of the Directors, Sir H. Montagu Allan was re-elected president, and Mr. K. W. Blackwell, vice-president.

Mr. W. H. Farrell, terminal superintendent of the Grand Trunk Railway, has been appointed general manager of the Algoma Eastern Railway Company, with headquarters at Sudbury. Mr. Farrell will have charge of the line from Sudbury to Little Current, and will assume the duties of his new position on July 1st.

PERSONAL NOTES

Mr. John C. Rose, who was for many years clerk of the township of Orillia, is dead.

Mr. Herbert M. Marler, barrister, of Quebec, has been appointed fuel controller of the province of Quebec. No salary is attached to the position.

Mr. John Porter, of the legal firm of Kelly and Porter, Simcoe, has been appointed county treasurer of Simcoe, to succeed the late Mr. Roger Crysler.

Mr. J. L. Webster who, for the past two-and-a-half years has been manager of the Stratford branch of the Bank of Montreal, has been promoted to the managership of the branch at Fort William.

Mr. A. E. Ham, who has been superintendent of insurance in the province of Manitoba for the past 12 years, has resigned from that position and has accepted the appointment of vice-president of the Union Casualty Company, with head office in Winnipeg. He has also been appointed chief agent for Winnipeg, of the New Hampshire Fire Insurance Company, of Manchester, N.H.

A. E. HAM,
Vice-President, Union Casualty Company.

Mr. C. R. Drayton, manager for Canada of the Union Insurance Society of Canton, Limited, is at present on the Pacific Coast, having gone there to meet C. Montague Ede, Esq., general manager of the company.

Mr. Robert H. Parks, operating manager of the Canadian Car and Foundry Company, has been elected a director. Previous to joining the company in June, 1917, Mr. Parks was general manager of the Bettendorf Company of Iowa.

Mr. D. A. Dunlap, of Toronto, has been elected vice-president of the Hollinger Consolidated Mines to fill the vacancy caused by the death of Mr. John McMartin. Dr. W. L. McDougald, of Montreal, was also recently elected to the board of directors.

Mr. Thomas Wood, formerly inspector for the Ocean Accident and Guarantee Corporation, has been appointed by the General Accident Assurance Company of Canada to the position of inspector for Western Ontario to succeed Mr. G. B. Crumb who has resigned.

Mr. F. M. Marcotte has been appointed manager of the Three Rivers branch of the Banque d'Hochelaga. Mr. Marcotte commenced his banking career at Three Rivers in 1901, was transferred to the head office in 1908, and appointed manager of the Outremont branch in 1913.

GROWTH OF UNION CASUALTY COMPANY

The Union Casualty Company, organized in 1917, under a Manitoba charter, with head offices in Winnipeg, is meeting with good success. The officers of the company are: President, M. J. McMichael; vice-presidents, L. M. Fingard and A. E. Ham; secretary-treasurer, J. O. Melin; solicitor, R. B Graham; directors, J. S. Turner and W. J. Bulman.

Mr. A. E. Ham and Mr. J. O. Melin will have active charge of the company, and both are well fitted by experience for seven years in the insurance field. Mr. Ham has just recently resigned from the position of superintendent of insurance for the province of Manitoba after twelve years of service, and is, therefore, familiar with all branches of the insurance business. Mr. Melin was for ten years chief examiner of the insurance department of the State of Minnesota.

The company commenced business in September, 1917, writing health and accident insurance, but they have also taken up other lines, including fire, automobile, plate glass, guarantee, and fidelity insurance. The authorized and subscribed caiptal is $500,000, of which $76,611 is paid up. Apart from the unpaid capital, which is, of course, security for policyholders, the assets total $74,084, including $7,928 of Victory bonds and $14,545 of province of Manitoba bonds.

The company has also purchased the Western Canada Accident and Guarantee Insurance Company, with head office in Winnipeg, of which the Hon. Edward Brown was president. The business of this company has been reinsured in the Union Casualty Company, who are now licensed to do business in Manitoba, Saskatchewan and Alberta.

Exports from Canada of machinery and of metal of every kind have been prohibited, except under individual licenses. Applications for approval of individual licenses must be made to the War Trade Board.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Brandon, Man.—Authority has been received to issue $15,000 debentures for a new pump at the waterworks.

Quebec, P.Q.—The committee of public works of the city council of Quebec decided on May 29th, to expend $61,039 in improving the pavements of the city.

Ethelbert, Man.—On June 8th, voting took place on an issue of $9,750 6 per cent. 15-years debentures for construction of four bridges.

Goose Lake, Man.—Voting took place on June 8th on a by-law covering $25,000 20-year debentures, for enlarging and improving school buildings.

Newcastle, N.B.—The $40,000 Northumberland County bonds reported last week were sold to the Dominion Securities, and not to the Eastern Securities Corporation, as stated.

Gladstone, Man.—On June 5th ratepayers voted on a by-law for an issue of $15,000 6 per cent. 30-year debentures, for construction of electric system for lighting and commercial purposes.

Montreal, Que.—The city of Montreal 5-year 6 per cent bonds, which were recently sold to the Banque d'Hochelaga, will, it is understood, be offered to the public at par and accrued interest.

Regina, Sask.—By-laws, covering a 7 per cent., 10 and 20-year debenture issue of $55,000, re damages in connection with Broad Street subway, and $175,000 for purchase of new unit for power plant, were passed.

Scarborough Township, Ont.—On June 10, the Scarborough Township Council sold $20,000 of school debentures at 6 per cent. to local farmers. It is also stated that local improvement debentures to the amount of $6,000, will be sold in a similar way.

Woodstock, Ont.—On the 10th inst., the ratepayers approved two money by-laws authorizing the expenditure of $20,000 and $18,000 respectively. The first sum is to provide a site and building for the Worsted Spinning Company, and the second was a grant to the Hosiers, Limited.

Winnipeg, Man.—At the meeting of the city council on May 13th, the necessary authority was granted the Greater Winnipeg Water District to borrow $3,000,000 on short-term debentures, and to issue $4,000,000 long-term stock as collateral for such short-term borrowing. Only $1,000,000 will be issued immediately.

Calgary, Alta.—The city's 7 per cent. gold debentures, dated June 1st, 1918, and due June 1st, 1928, are being offered at par and interest by a syndicate composed of Messrs. A. E. Ames and Company, the Dominion Securities Corporation and Wood, Gundy and Company. The bonds are in $500 and $1,000 denominations, and interest is payable semi-annually on the 1st of June and December. The total issue is $2,300,000, this being the sum which it was found necessary to raise for the city's requirements. The issue does not constitute new financing, but is for refunding issues of short-term notes, made prior to the war. The population of Calgary is about 65,000, the assessment $76,508,000, and the net debt $7,253,027.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from May 27th to May 30th, 1918:—

School Districts.—Usherville, $1,200 10-years not ex. 8 per cent. instalment; Wm. Murray, official trustee, Usherville. Poplar Springs, $3,000 10-years not ex. 8 per cent. instalment; S. J. Teslock, Box 265, Canora. Pilgrim, $2,500 10-years not ex. 8 per cent. annuity; W. W. Walp, Craik. Sandringham, $2,200 10-years not ex. 8 per cent. annuity; R. Sheppard, Alameda. Bonnie Bank, $2,000 10-years not ex. 8 per cent. annuity; Geo. R. Kraft, Kamsack. Orel, $2,000 10-years not ex. 8 per cent. annuity; Walter Pope, Alticane. Rock Point, $2,500 10-years not ex. 8 per cent. annuity; W. J. Gardiner, Macrorie.

Rural Telephone Companies.—Spalding, $24,200 15-years not ex. 8 per cent. annuity; G. G. Tjomsland, Spalding. Glenford, $2,000 15-years not ex. 8 per cent. annuity; J. A. Brose, Glenside.

Town.—Gull Lake, $1,200 10-years 6 per cent. annuity; F. W. Hinton, Gull Lake.

The following is a list of debentures reported sold from May 27th to May 30th, 1918:—

School Districts.—Mawer, $4,000, Rosefield, $2,500; Waterman-Waterbury Manufacturing Company, Regina. Lilian, $1,500, North Lake, $1,300, Shackleton, $1,000, Riverdene, $1,200, Gabriel, $1,900, Lynthorpe, $1,000; W. L. McKinnon and Company, Regina. Margo, $2,000, One Mile Coulee, $2,000; Canada Landed and National Investment Company, Winnipeg. Hester, $2,300, Glenview, $2,000; Great-West Life Assurance Company, Winnipeg. Kingsmead, $2,000; E. B. Jonah, Regina.

Rural Telephone Companies.—Short Creek, $4,600, Hilldrop, $1,000, St. Gregor, $1,300; W. L. McKinnon and Company, Regina.

KENT COUNTY FINANCES

The last of the Kent county debentures, issued for the House of Refuge, were liquidated on Monday, June 10th. The only county debt is now $15,000, issued for patriotic purposes. The tax rate is to be struck this week, and will include grants for patriotic purposes.

NEW BRUNSWICK BONDS

The particulars of the tenders which were received by the province of New Brunswick for an issue of $70,000 5 per cent. bonds, due August 1, 1937, are as follows:—

Messrs. Wood, Gundy and Company, 87.78; Eastern Securities Company, Limited, 87.316; J. M. Robinson and Sons, 87.30; Dominion Securities Corporation, Limited, 87.29; Greenshields and Company, 87.25.

ADVANCE IN PRICE OF VICTORY BONDS

On Saturday, the 8th instant, the price of Victory Loan bonds of all maturities was advanced from 98⅞ and interest to 99½ and interest. The new price is considerably above the issue price, and is an indication of the strength of the bond market. The fact that the Victory bonds are exempt from federal taxation, and that it has been suggested that the new issue should not have this feature, no doubt has something to do with the price movement. Dealers reported an active demand for the bonds at 98⅞ and interest, and those who desired to sell could easily obtain a price of from ½ to 1 per cent. less than this. Now that the selling price has been raised to 99½, the price which the dealers will be willing to pay will, no doubt, increase proportionally.

NEWFOUNDLAND'S VICTORY LOAN

Preparations are being made in Newfoundland to float an internal war loan, to be called the Victory Loan. This is the first time that an attempt has been made to float an issue of bonds in the country. The population is estimated at 250,000, and the wealth per capita is, as well known, very small. Since 1914, however, the country has been fairly prosperous, a good market for fish, which is the principal product of the island, being assured, and the iron mines thriving under the increased demand and higher prices for iron and steel.

On account of the fact that Newfoundland politics have always been characterized by severe party strife, there was some hesitation on the part of the government in offering this issue. It has, however, been decided to proceed with it, and the Canadian Victory Loan has been used as a model in discussing the subject. About a month ago it was suggested that the minimum payment be made $50 and the maximum $500, with intermediate amounts; that the rate should be 6 per cent., with a special discount for payment in full of total subscription; that the bonds should also be non-assessable and negotiable, as well as redeemable; the maturing period should not be longer than ten years, excepting in the case of the $500 denominations, which should be for twenty years, as the man who could purchase sums of this amount would naturally prefer a longer period as a safe and substantial investment. It was also suggested that the surrender of Newfoundland debentures in part payment could be arranged.

Exempt from Dominion Tax

TAXATION PREFERABLE TO PRICE REGULATION

System of Maximum Prices Has Invariably Failed—Encouragement of Production and Taxation of Profits More Satisfactory

The 27th bulletin of the Departments of History and Political and Economic Science in Queen's University, Kingston, is by Mr. W. C. Clark, and is entitled: "Should Maximum Prices be Fixed?" It is pointed out that the old theory of supply and demand is not altogether fallacious, in spite of lack of the popular favor. The booklet discusses the attempts to control prices as follows:—

"The popular remedy is one which attacks the symptoms of the disease, rather than the cause. Soon after the outbreak of this war, as of most wars, governments were besieged with complaints against the rising cost of living. The blame was, of course, laid at the door of speculation, profiteering, exploitation by middlemen. To curb this wickedness, all that needed to be done, so the press told the public and the public told the government, was to fix maximum prices.

"Now it is conceivable that the state could fix prices with success. But certain conditions would have to be fulfilled. The state would have to understand thoroughly the nature of prices and the price system, and would have to assume the various functions with regard to production and consumption which the price system and competition have been shown to perform. Whether a single authority could be set up with wisdom enough to exercise the power with any certainty of beneficial results is doubtful, for the play and interaction of all the motives and considerations that determine prices and relate them to each other would seem to defy human calculation. History, is full of unsuccessful attempts. The experience of Julian the Apostate, of Constantine, of mediæval Europe, of some American colonies during the Revolution, of revolutionary France, goes to show that governmental regulation of prices usually results in aggravating the evils which it seeks to remedy. But an age of supermen, of super-organizers, may defy the teaching of history. Success is still conceivable. In the following paragraphs, we shall attempt to discover whether in the present war, governments have been any more successful in realizing the nature of and executing the great task which popular clamor against high prices forced upon them.

Cause of Agitation for Price Fixing.

"The case for fixing prices is in large part merely the criticism of what Mr. Hoover calls 'the specious arguments of the siren of high prices.' The force that drives most governments to adopt the policy is the popular cry that if prices rise, the poor alone suffer. High prices, it may be, reduce consumption, but they reduce it through the methods of famine, throwing the greater part of the burden on the people of limited means. Money, if you like, is just a system of food or commodity tickets; your dollar bill is a blank ticket, enabling you to command the world—to the extent of one dollar. Unfortunately these tickets are unequally divided and as long as this is true, what is an inconvenience to the rich man may be a cruel hardship to the poor. But, on the other hand, the fact must be accepted that any remedy that materially reduces consumption must accomplish its object chiefly through the great body of consumers. The rich, after all, are relatively few in number and their consumption of the chief necessaries, such as bread, is individually very little greater than that of the masses of the people. Besides, they are better able, and perhaps as a class more likely, to respond to a patriotic appeal for substitution of foods and readjustment of diet. Finally, the real point is whether the proposed alternative offers any better solution of the problem. Can the unequal incidence of high prices be remedied by any governmental legerdemain with prices?

Sugar Regulation in England.

"Recent experience confirms the verdict of history that the moment a government attempts to fix maximum prices, it sets in motion forces which react to the injury of the poor even more than to the injury of the rich. The English handling of the sugar question is a case in point. As this is a commodity of which the supply was absolutely controlled by the government, this is usually cited as a successful instance of price regulation, but a Royal Commission reported last summer that if other necessaries were similarly controlled and distributed, the unrest would become very dangerous during the winter. Finding itself with only 75 per cent. of the usual importation, the sugar commission, instead of rationing the people or selling the diminished quantity for what it would fetch, simply fixed a price somewhat below the market level. At this price it turned the sugar over to the grocers in proportions in which the total was divided before the war and insisted on their distributing it equitably among their regular customers at corresponding prices. As businesses wax and wane, and as an unexampled shifting of the English population had occurred since 1913, the grocers found it impossible to work out the principle strictly. They adopted instead what was perhaps the best course left open to them by giving away the sugar 'with a pound of tea,' 'sometimes in the literal sense of that expression, but more often simply by being accommodating or otherwise, according as the would-be purchaser of sugar was in respect of other things a customer whom it was desirable to placate.' The results were worse than if no attempt had been made to control prices. For in the first place, if allowance is made for indirect payments and for the large amount of inconvenience and annoyance endured, the consumers as a whole paid just as much as they would have paid in an open market. And in the second place, unrestricted prices would have brought a more just distribution of the shortage.

"Under the scheme adopted, the restriction of supply fell almost wholly on the poor who were 'choked off' by the grocers, and on those localities where the industrial population had grown most rapidly. Obviously the desire of the retailer to placate the rich would give the wealthy at least their usual advantage. The poor could seldom afford to spend a couple of shillings on other things for every pound of sugar bought, and so were frequently refused any sugar at all. Food Controller Devonport steadily refused to force the grocers to sell because he realized that at the government price the sugar would not have gone round and the queue system of distribution would have resulted, first comers getting all they asked for and late-comers getting none at all. Time and again, during the present war, the test of physical power which is involved in the queue system has been proved just as inequitable as that of money power and much more conducive to industrial unrest. The scandals of unequal distribution of sugar finally compelled the adoption of a system of rationing based on registered orders."

Rationing and Price Fixing Unsuccessful.

Illustrations are also given from France, Germany and the United States and it is pointed out that the regulation of the price of wheat in Canada and the United States has not met with the success anticipated. The bulletin concludes as follows:—

"We must conclude that the overwhelming weight of evidence is against a policy of fixing maximum prices. While ostensibly an easy solution for the problems of profiteering and the distress of the consumer, it fails to accomplish the objects sought and it has a multitude of unforeseen consequences which are frequently worse than the original evils. It fails to check waste and unnecessary consumption; it drives the commodity from the market and discourages production; it throws out of balance the sensitive mechanism of the price system; it involves endless frauds, with a general lowering of the moral standards of the community. It therefore aggravates the conditions which it seeks to remedy and if pursued far enough, it will inevitably drive the government to adopt two other drastic measures. For arbitrary prices determined with no reference to competition must be supplemented by arbitrary regulation of production and consumption.

"The state, that is to say, must control production and direct the production of the different commodities, either by a system of compulsory labor or by some graduated scale of rewards which would lure the requisite proportion of laborers to the different industries. Further consumption would have to be controlled by an elaborate system of rationing. Only by so doing would the state ensure the performance of the various functions ordinarily performed by the competitive price system which has now been discarded, in whole or in part, as the governor of industry. Most governments fail to understand those functions—so automatically and unconsciously are they performed at present—or to see the necessity of assuming them. If they do take up the burden, there is at least a chance of success, though the task is so huge and so complicated that it might seem to require something like omniscience on the part of a single authority. For instance, all the available evidence goes to show that Germany, in spite of her wonderful efficient bureaucracy, has made at least a partial failure of rationing, and as for production she has regarded any comprehensive measure of control as impossible even for her.

"In Canada, at any rate, the adoption of these measures is entirely impracticable. Control of production in

either of the two ways suggested is obviously impossible. Rationing is likewise impracticable because the population is scattered so thinly over so large an area and because the system would require a civil service and police staff disproportionate to the total of the population. Mr. Hoover's conclusion on this point for the United States is even truer of Canada; figuring that it would require more than 1,750,000 people, he says, 'rationing is a hopeless suggestion and one which can never under any possible conception be imposed on the American people.' We may therefore congratulate ourselves that our own authorities have placed production before price and, with a few exceptions, have steadily refused to adopt a policy of fixing maximum prices.

Production May be Stimulated.

"But to deny the efficacy of what seems the simplest solution is not to deny the desirability of the state concerning itself in other ways with the problem which war has created. The conclusion reached above was not based on any doctrinaire belief in laissez-faire but on a study of the facts of experience. Other forms of state interference or state guidance can undoubtedly be justified by the same test, by the ability to contribute in actual practice to a greater measure of social welfare. Space permits only the barest mention of a few of these. They are all based on the principle that the causes rather than the symptoms of the disease must be attacked. Thus since the root cause of the present trouble in the Northern Hemisphere is scarcity, governments should bend every effort to augment supplies.

"In the case of food, for instance, organization of labor supply; aid to producers in securing seed, fertilizers, tractors and other machinery; removal of artificial obstacles, wherever possible; proper direction as to probable trend of future demand; education of producers as to best methods; provision of timely and accurate market information; direction of substitution in food production—such things are indispensable. Most people recognize the necessity of some fundamental reorganization of our productive resources. Where labor, materials, capital, etc., are painfully limited, every possible care should be taken to direct them solely to the production of essentials and, indeed, only those with the highest food values. The food administration should take all practicable steps to facilitate such a reorganization. It is conceivable that, if the supply of any commodity is of supreme importance and if conditions are so uncertain as to provide little or no incentive to producers, the guarantee of a minimum price may be necessary, as has been given for wheat in the United States, and for potatoes and the grains in England. But there are grave dangers of serious financial losses to the state and of creating a vested interest which will resist its own removal.

A Campaign of Education.

"On the demand side also, much can be done. Correct information and sound advice will do much to prevent panicky buying and can be effectively supplemented by organization of buyers, encouraged and directed by the government. Wasteful consumption can be reduced, substitution of less needed or more nutritive foods can be secured, by elaborate publicity and advertising campaigns. Much has been done in this field already, though mistakes have been made through lack of an elementary knowledge of psychology and economics. Man is not a glorified test-tube, nor should he be advised to consume high-priced commodities which represent a wasteful working up of our potential food resources. In these days when the largest part of the commercial supply of poultry comes no longer from the barnyard as a cheap by-product,, the average man wisely refuses to accept the $2 chicken as a regular substitute for his $1 three pound beef roast. To demand chickens and thus divert labor to a very wasteful process of converting food potentialities into actual food can only be justified on the optimisitc assumption that the war is to be won out on existing stocks of food. But a commonsense campaign for economy, substitution and wise consumption could do a great deal to stretch supplies and check that panicky buying which now tends to give the sellers of certain commodities a quasi-monopoly position.

Profits May be Secured by State.

"Finally, to meet that mixture of good and evil which is condemned wholesale as 'profiteering,' the most effective remedy is drastic taxation of excess profits, taxation far more drastic and pervasive than we have yet attempted. To this end, registration and licensing of middlemen of every kind and for all important commodities; periodical reports as to supplies, costs price margins and profits; and power to inspect books, if necessary, will be indispensable if 'tab' is to be kept on trade conditions and the taxation programme made effective. Mere publicity will do a great deal to keep dealers within bounds. But if any instances of objectionable profiteering, such as manipulation or cornering of the market, do occur, these can easily be discovered by experts, and revocation of licenses, commandeering of supplies or other appropriate penalties should follow. Profiteering in the ordinary sense—i.e., taking advantage of market conditions, would merely result in excessive profits and these would almost wholly come back to the public in the form of taxes. Greater revenue from taxation would mean that the government would not need to raise so much by credit loans. Less inflation would therefore result and hence one of the chief reasons for high prices would be removed. A policy of war finance based, not on inflation but on drastic taxation, chiefly of incomes, is long overdue in all countries.

Wages Have Risen Also.

"If it did actually happen that the price of the chief necessaries rose to a level absolutely beyond the reach of a certain class in the nation, a case would be made out for more radical remedies—perhaps higher pension or separation allowances, enforcement of a minimum wage high enough to make possible the purchase of sufficient necessaries, or even a government subsidy. Some of these would, of course, be attended by dangers. The raising of wages would have to be confined to a limited class, else a vicious circle would result—higher wages leading to higher prices, higher prices to higher wages, and so on. Again, such a policy as the English bread policy, whereby, chiefly for political reasons, bread is sold below cost, and the difference is met out of the treasury, involves the state in heavy expenditure and will probably encourage rather than check the consumption of the subsidized product. The case for should be clearly proved. Rising prices should not be considered apart from rising wages. To what extent do steadier employment and higher wages make up for higher prices? Not wholly, we must admit, but the following quotation from the organ of the British Fabian Socialists is significant:—

" 'It is literally true that there were at all times more people hungry in England in the years of peace and prosperity that preceded the war than there are now in the fourth year of unprecedented conflict and expenditure—more infants perishing for lack of milk, more children found at school insufficiently nourished, more adults slowly starving to death, more unfortunate and friendless aged passing silently out of life from sheer lack of food and warmth. Far fewer families in the British Isles failed to get not only a full but even an extravagant Christmas dinner in 1917 than in 1913.'

"This statement, which is corroborated by organs representing such different angles of social sympathy as 'The Nation' and the 'Spectator,' gives one a better perspective, and reminds us that the evil of unequal and inadequate incomes is a peace problem as well as a war problem."

INCREASED TAXATION IN ONTARIO COUNTIES

An increase in the county tax rate of Norfolk amounting to nine mills will, it is understood, be made shortly. This is the result of contributions to the British Red Cross, Patriotic Fund, Young Men's Christian Association and Salvation Army. There is a general sentiment against floating any more debentures.

The county of Ontario also recently decided to add one-half a mill to the tax rate for the purpose of granting $3,000 to the Young Men's Christian Association.

Wellington county's rate has been fixed at 7.62 mills, or more than a mill over that of last year. This rate is exclusive of the grant to the Red Triangle of ¾ of a mill, affecting all places which have not made a grant.

The county council of Oxford recently passed an interesting resolution. It was decided that in future all county officers asking for an increase in salary must at the same time hand in their resignation. The occasion of the resolution was the increase in the salary of the county treasurer.

Announcement has been made of the formation of a partnership for the purpose of carrying on the work of auditing and accounting under the style and firm name of Cooper, Sanburn and Company, with temporary offices at 105, 352½ Portage Avenue, Winnipeg.

ROAD IMPROVEMENTS TO BE RESTRICTED

Room for Many Improvements But Financial Situations Prevent Expenditure

"The Public Service Monthly," issued by the province of Saskatchewan, contains the following outline of the policy of the department of highways:—

"The probable policy of the Department of Highways as regards road work for the year 1918, in view of existing conditions, has been a matter of some speculation amongst the people of the rural districts and especially amongst municipal councils in every part of the province. Those who heard Hon. S. J. Latta, minister of highways, speak at the rural municipal convention at Moose Jaw in the beginning of March, were given an outline of the department's proposals, and the changes which have now taken place were foreshadowed on that occasion.

"Several factors combine to make the year 1918 an excellent period for planning future works, to be undertaken under more favorable conditions than obtain at present, and to determine upon a comprehensive and settled programme of highway construction, the carrying out of which, although it may extend over a period of years, will bring about the department's ambition, which is to have the whole province covered with a system of well constructed main highways, giving to the majority easy access to their most convenient market. The chief reason why this should be a year for planning rather than for the carrying out of an extensive programme of road work, may best be set out in the words of Mr. Latta, when he said: 'I am convinced that good roads are absolutely essential in the building up of the great farming country, and that the road policy is of quite supreme importance in ordinary times. Present times and conditions, however, are extraordinary. The supreme thing now is the winning of the war, and every dollar possible should be directed towards this end. Considering then these things, the capital expenditure this year will be reduced to a minimum, provision being made for only such works as are absolutely essential.' As the amount of construction work to be done this year will therefore be confined to the construction of such bridges as are most urgently required, the time is opportune for preparation for the future, and for starting a policy which in the end will satisfy the needs of the community for better communications.

"The Department of Highways is planning for a system of main highways throughout the province, supplemented, with the assistance of the rural municipalities, by the construction of lateral feeders, in such a manner as to eventually constitute a system of cross country main routes. The first step to attain this object has already been taken. A circular letter was sent to all municipal councils, asking them to send in a map showing all the existing highways through the settled districts leading to market towns or shipping points. These individual maps will subsequently be grouped into one large map, and where the roads do not connect, the department and the municipalities concerned will confer and cooperate in effecting a junction which will be satisfactory to all. In passing it may be mentioned that a large number of these municipal road maps have already been received, and the department hopes in a very short time to have the whole of this important information at hand.

"It is probable that the rural municipalities will be expected to look after the construction and maintenance of all purely local roads and feeders to the roads constituting the main road system, and the department will endeavor to devote the money which will be available for government expenditure on road construction work to co-operating with the municipalities in carrying out the construction of roads included in the main road system.

Motor License Grants.

"The department will again as last year distribute to rural municipalities grants from the revenue received from automobile licenses to be used for the maintenance and improvement of main roads leading to market towns. The Highways Act provides that this grant shall be not less than $300 nor more than $600 in any one municipality and further that the total of all such grants paid in any fiscal year shall not exceed in the aggregate 80 per cent. of tne net revenue received by the treasury department during the previous fiscal period from the fees collected for automobile licenses. Last year the maximum amount of $600 was granted to municipalities surrounding the cities; $500 was granted to the municipalities surrounding towns of a population of 2,000 or over and the balance was given to municipalities in proportion to the area of each municipality. The ordinary-sized municipality of nine townships received $425.

Road Drags.

"There are some who advocate that the use of the road drag should be made compulsory, but while the department is willing to do all in its power to encourage the employment of this most useful implement in maintenance work, by force of example, by road dragging competitions, and by continued recommendations of its use, so drastic a rule could not be put in force unless the rural municipalities themselves requested the government to adopt such a course.

PRIMITIVE METHODS OF HANDLING COAL

No Serious Attempts Made to Prevent Great Waste in Mining and Coking of Coal in Canada

"Upon the whole question of coal Canada is woefully behind the times," stated Sir Clifford Sifton at the ninth annual meeting of the Commission of Conservation. "Dr. Adams," continued Sir Clifford, "the chairman of our committee on minerals, a considerable time ago, after studying the question, moved for the appointment of an inspector of mines in Western Canada. This proposition was laid before the government and it concluded to make the appointment. Instead, however, of consulting Dr. Adams and the committee on minerals in making the appointment, the government made an appointment which it can only be said was entirely inadequate and unsatisfactory. It still remains a fact that wasteful methods of mining are permitted throughout western Canada. No serious attempt has been made to grapple with the problem of preventing the serious and irreparable waste which is constantly going on in the mining of our western coal areas. Provision for inspection to prevent the loss of human life has been made by the provinces; but the permanent waste of very large quantities of valuable coal still goes on. What is required is a competent public service of technically trained men who will undertake the supervision and control of the mining of coal upon Dominion lands and put an end to the waste which is going on at the present time.

"In another respect, we are, as I have frequently stated, greatly to blame for pursuing wasteful methods. There are in the Dominion of Canada at the present time approximately 2,600 coke ovens. Of these, 910 only are by-product ovens. The rest, amounting to about 1,700 ovens, convert the coal into coke without saving the by-products. We are thus using coal in the most wasteful way and throwing away great sources of wealth."

CANADIAN NORTHERN EXPENDITURE

The sum of $2,000,000 will be spent in improvements and construction on the Canadian Northern Railway during this year. Practically all of the work will be one lines west of Port Arthur, in Saskatchewan and Alberta.

FIRST NATIONAL CORPORATION OF BOSTON

A company has been organized in Boston as a subsidiary to the First National Bank of Boston, and will be known as the First National Corporation. Its capital of $2,250,000, fully paid, is entirely owned by the bank. The corporation, it is stated, will supplement the work of the bank in the foreign field. It will do an international letter of credit business, and will develop a discount market for acceptances, particularly in New England. Offices have been opened in Boston, and branches will be established in other cities and in foreign countries as business develops.

The annual general meeting of shareholders of the Home Bank of Canada will be held at the head office of the bank, 8 King Street West, Toronto, June 25th.

DIVIDENDS AND NOTICES

THE MONTREAL CITY AND DISTRICT SAVINGS BANK

Notice is hereby given that a Dividend of Two Dollars and forty cents per share has been declared on the Capital Stock called and paid up of this Bank, and will be payable at its Head Office, in this city, on and after Tuesday, the second day of July next, to shareholders of record the 15th of June at 12 o'clock noon.

By order of the Board,
A. P. LESPERANCE,
Manager.

Montreal, May 27th, 1918.

CANADIAN CAR & FOUNDRY COMPANY, LIMITED, MONTREAL

Notice is hereby given that a dividend of Three and One-Half per Cent. upon the accrued dividends on the preference stock of the Company has been declared, payable on July 15th, 1918, to shareholders of record at the close of business June 15th, 1918. The transfer books of the Company will not be closed.

Shareholders will confer a favor upon the management by advising The Royal Trust Company, Montreal, Transfer Agents for the stock, of any change in address.

By Order of the Board.
F. A. SKELTON,
Vice-President & Treasurer.

Montreal, June 1st, 1918

THE CANADIAN CROCKER-WHEELER CO., LIMITED

DIVIDEND NOTICE

The directors of The Canadian Crocker-Wheeler Company, Limited, have declared a One and Three-Quarters per cent. (1¾%) dividend on the preferred stock of the Company for the three months ending June 30th, 1918, to shareholders of record June 20th, 1918. Also a dividend of One and Three-Quarters per cent. (1¾%) on the common stock of the Company for the three months ending June 30th, 1918, to shareholders of record June 20th, 1918.

The stock books will be closed from the 20th to the 30th of June both days inclusive.

Checks will be mailed to shareholders on June 29th, 1918.

By Order of the Board.
L. R. GRIMSHAW,
Secretary-Treasurer.

St. Catharines, June 5th, 1918.

PROVINCIAL PAPER MILLS CO., LIMITED

The Transfer Books will be closed from the twentieth to the thirtieth day of June, 1918, both days inclusive.

J. E. McELDERRY,
Managing Director.

Guelph, June 4th, 1918.

CITY OF MONTREAL BONDS

The syndicate which purchased the Montreal bonds last week, through the Bank of Hochelaga, is composed of Rene T. Leclerc and Versailles, Vidricaire and Boulais, Limited. The former handled an issue of Montreal bonds earlier this year, and the latter firm placed an issue of $1,500,000 of Outremont bonds on a 6 per cent. basis.

The bonds of the present issue are dated May 1st, 1918, and are in $100, $500 and $1,000 denominations.

SASKATCHEWAN BOND SALE

The province of Saskatchewan has sold an issue of $1,500,000 6 per cent. 20-year bonds to Nay and James, of Regina, at 94.625. The tenders were opened on Wednesday, June 12th, by the Hon. C. A. Dunning, provincial treasurer. The price paid was a little above a 6¼ per cent. basis. The Regina firm was acting for a syndicate managed by Brent, Noxon and Company, of Toronto, and including A. E. Ames and Company, Wood, Gundy and Company, Dominion Securities Corporation and W. A. Mackenzie and Company, all of Toronto. The selling price has not yet been announced, but it is understood the bonds will be offered the beginning of the week.

A tender was also received from C. Meredith and Company, of Montreal, of 94.70. The Toronto syndicate, however, specified for payment in Regina, and their offer was on that account considered more favorable.

Subscriptions from the army to the eighth German war loan brought the total of the loan up to 15,001,425,000 marks, according to Berlin despatches.

STATE CONTROL OF LIFE INSURANCE

Is It a Possible Economic Development in the Near Future?—Enormous Expense Would Be Involved

BY L. K. FILE, F.I.A., F.A.S.

There seems to be a belief in some quarters that, after the war is over, there will be a popular demand for the nationalization, or taking under government control, of many commercial enterprises now under private control, and that the great business of life insurance will be one of the first ones to be so dealt with. In support of this view, it is stated that one of the more important planks of the Labor Party platform in Great Britain is government control of all branches of insurance, and attempts are made to prove that in the United States the tendency is in the same direction.

No Justification for Nationalizing Life Insurance.

To one, however, who attempts to look below the surface and to make some analysis of causes and effects, it is a little difficult to see much justification for this attitude. There are many factors that must needs enter into the question, and the bearing of each one must be studied before a general conclusion can be arrived at. Let us consider just what results would justify the state taking over all the life insurance institutions in the country, assuming, of course, that if the state should do so, adequate compensation would be granted those entitled to it. The only result that would in any way justify such a course would be the furnishing at less cost of the same service that the companies are now furnishing. Unless this is accomplished the transfer would result in an economic loss. The question of greater security affects the question very little because of the unquestioned strong position of our leading life assurance institutions. But would such a result follow? The probabilities are all against it. As a matter of fact, actual experience as exemplified in New Zealand proves that the state fund does not give policyholders any cheaper insurance than the private companies. In New Zealand we could not have a better opportunity of studying what state control of insurance can do. The New Zealand insurance fund is well known throughout the insurance world for progressiveness and economic management, and yet the private companies doing business in New Zealand in competition with the state fund have no difficulty in getting their full share of business offering.

Unsound Theories Will Defeat Themselves.

So much for the merits of the proposition. Now let us consider for a moment another aspect of the question. It is believed in some quarters that the war has given a great impetus to the growth of socialistic ideas, and that many such ideas will be put into effect when the war is over irrespective of whether they are economically sound or not. The propaganda that the companies had to meet from the fraternals in past years and which has now been completely refuted by the fraternals finding themselves obliged to give up their "lower cost" ideas and raise their own rates is now reappearing in another and a more insidious form. Owing to lack of adequate publicity regarding the soldiers and sailors insurance scheme adopted in the United States, the seed has taken root and the public has in many cases come to believe that the companies have been and are charging too much, and that the state scheme there adopted of granting insurance to their fighting men at an annual rate of $8 per thousand is complete proof of this. The fact that the officials in charge of the state scheme frankly state that the premiums are merely nominal and must be supplemented by millions and perhaps billions of dollars from the public treasury has been overlooked by them. The actual working out of the scheme, however, will demonstrate this quite clearly and must convince all reasonable people that insurance cannot be sold at bargain rates even by the state. As a matter of fact, the soldiers and sailors scheme was never intended to be self-sustaining but was a patriotic war measure and not a commercial measure.

An Insuperable Obstacle.

However, the chief, and to my mind the insuperable, obstacle to state control of insurance, even if such control were to be seriously contemplated is to be found in the many complex and tremendous problems that must be dealt with at the close of the war. The problem of finance, alone, involving as it does the care of the enormous war loans and the resultant heavy taxation, is a staggering one and will tax the abilities of the leading statesmen in all countries for many years to come. It is hard to see how any nation can be willing to spend many millions more in taking over life insurance companies and perhaps rendering themselves liable for large annual subsidies in addition, in order to maintain the new system, a proceeding possibly rendered necessary by the adoption of rates absolutely inadequate, but adopted to make it appear that state administration is cheaper.

Best Educational Propaganda.

The best educational propaganda, and one to which, in my opinion, the companies would offer no opposition, would be the establishment in every country of a state life insurance fund such as is found in New Zealand. The state could establish its fund by buying out some existing company if necessary. The experience in New Zealand, already referred to, proves conclusively that the companies have little to fear from such competition, and the little competition the state fund did furnish, would be a small price to pay for the favorable advertising that would result from a comparison of the results under the two systems.

That there is a movement in the direction of the establishment of such funds is shown by the fact that there is a bill now before the legislature of Massachusetts with the object of providing an organization of agents and solicitors for the savings bank scheme of life insurance which has hitherto been done over the counter only. The bill, if enacted into law, will give Massachusetts what would in effect be a state fund, working along the same lines as the private companies.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended June 7th, 1918:—

Trethewey, 66,000; Beaver, 75,512; La Rose, 104,047; O'Brien, 64,075; Dominion Reduction Company, 85,000; Temiskaming Mining Company, 59,180; Edwards and Wright, 88,000; National Mine, 41,857; Mining Corporation of Canada, 215,147; Buffalo, 198,000; McKinley-Darragh, 173,453. Total, 1,170,271.

The total shipments since January 1st now amount to 12,317,283.8 pounds, or 6,068.4 tons.

MISCELLANEOUS INSURANCE IN ALBERTA

The following is a statement of miscellaneous insurance business in Alberta for the year 1917:—

	Premiums.	Losses.	Ratio of losses to premiums. Per cent.
Accident	$180,433.15	$ 56,263.94	31
Sickness	49,471.18	19,727.66	40
Tornado	779.52	6,049.47	776
Sprinkler leakage	716.53	194.16	27
Inland marine and transportation	2,546.63	1,059.79	42
Steam boiler	6,701.34	257.82	4
Live stock	29,707.46	12,753.67	43

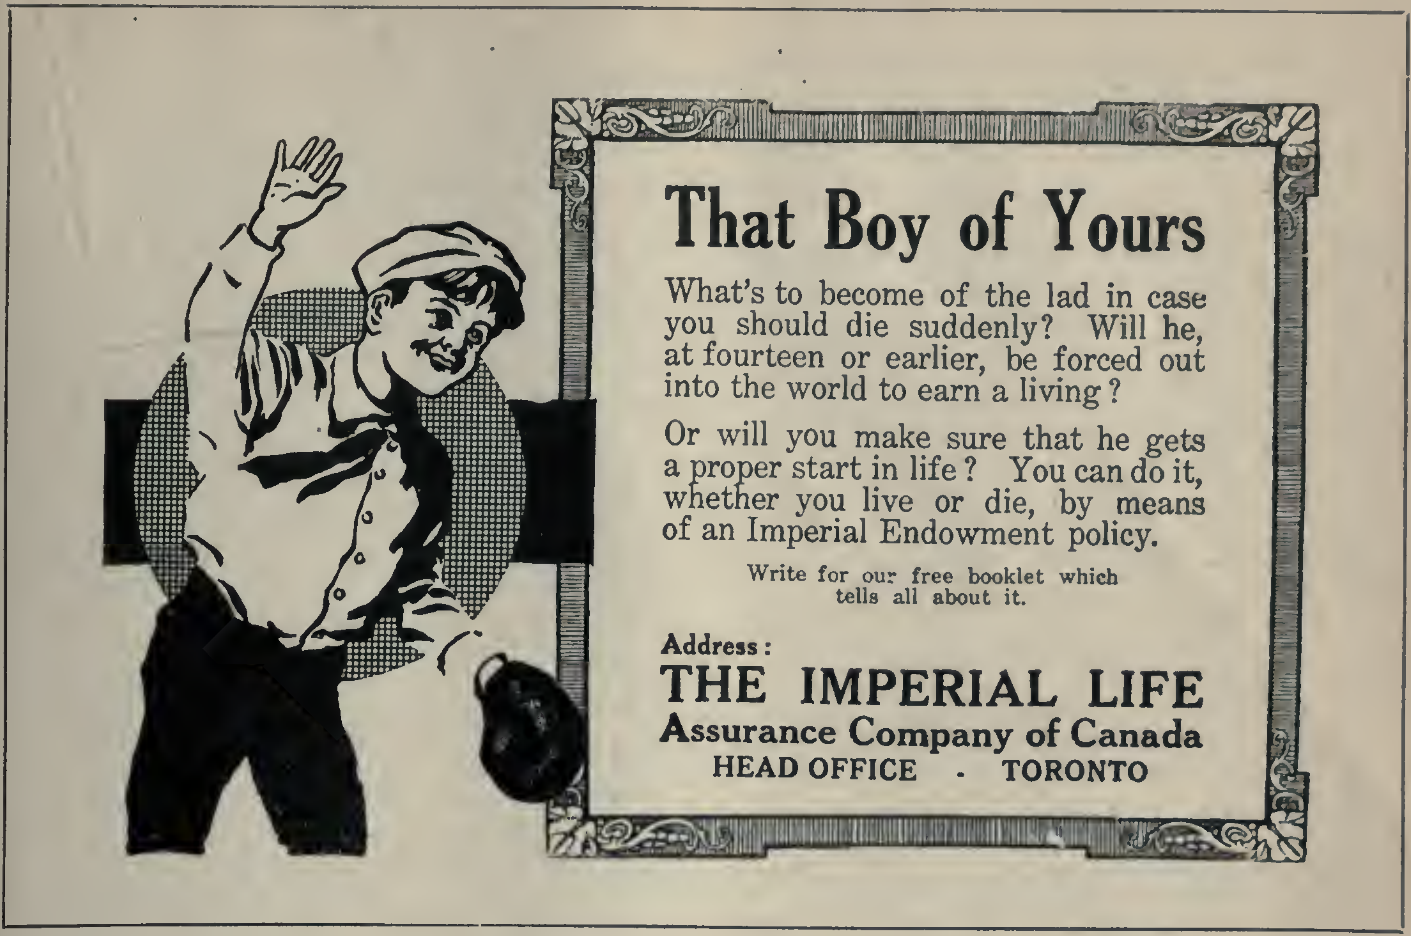
It will be seen that the tornado insurance is the only case in which the losses exceed the premiums. The amount of this class of insurance is, however, quite small, and if a considerable loss is incurred in any year the losses may be many times the premiums. This was the case in 1917, a loss of $5,500 being incurred by the Home Insurance Company on a frame corrugated iron implement and machinery warehouse at Medicine Hat, Alberta, as the result of a tornado on June 28th, 1917. If this item were omitted the premiums would be in excess of the losses.

In only one other class, viz., guarantee insurance, are the losses in excess of 50 per cent. of the premiums, and very few companies incurred losses heavier than the premiums they received.



That Boy of Yours

What's to become of the lad in case you should die suddenly? Will he, at fourteen or earlier, be forced out into the world to earn a living?

Or will you make sure that he gets a proper start in life? You can do it, whether you live or die, by means of an Imperial Endowment policy.

Write for our free booklet which tells all about it.

AGRICULTURE IN THE WEST

Substantial Increase in Dairy Produce—Crop Prospects are Good

The opinion expressed by the greater number of the agents of the Canadian Northern in the crop report of last week, that but little permanent damage had been done the growing grain in Western Canada on account of frost, high winds and adverse weather conditions, is vindicated in the report received from 230 agents of the Canadian Northern at the head offices of the company recently.

Generally speaking, the weather has become favorable throughout the entire grain growing areas served by some 6,000 miles of the company's lines in Manitoba, Saskatchewan and Alberta. Eighty-five agents report the wheat "as above ground and looking fine."

Moreover, it is shown that in cases where real damage was thought to have been done by frost or wind, that the wheat is showing green and appears to have suffered no damage apart from temporary set-back in growth.

Farming Becoming More Varied.

A remarkable increase during 1917 in handlings of livestock and of butter, cheese, eggs, dressed meat and dressed poultry, over its lines in Western Canada is indicated in a statement compiled by the freight deparment of the railway. Any great increase in tonnage in these commodities, of course, could not be accomplished without pronounced progress in permanent farming in areas served by the Canadian Northern Railway in Manitoba, Saskatchewan and Alberta. It is significant that the prairie provinces are becoming exporters of dairy products, where in recent years they were importers on a considerable scale.

During 1917, 11,363 cars of livestock were handled over the lines of the Canadian Northern Railway system, as compared with 7,245 during 1916. This is an increase of 4,118 cars or 57 per cent.

Of cattle in 1917, there were handled 5,421 cars, as compared with 2,900 in 1916. Of hogs 2,274 cars, as compared with 1,768 in 1916. Of sheep 261 cars in 1917, as against 76 in 1916; and mixed stock 3,407 in 1917, as compared with 2,501 in 1916. The percentage of increase in cattle was 87 per cent.; of sheep, 243 per cent.; hogs, 29 per cent.; and mixed, 36 per cent.

During 1917 the produce shipped from stations on the Canadian Northern western lines reached a total of 24,618,000 pounds, as compared with 21,436,000 pounds in 1916, an increase of 3,182,000 pounds, or 15 per cent. The butter shipped amounted to 8,146,000 pounds, as compared with 6,826,000 pounds in 1916, an increase of 1,320,000 pounds. The cheese ed amounted to 8,146,000 pounds, as compared with 6,826,000 in 1916, an increase of 292,000. Eggs in 1917 amounted to 5,980,000 pounds, as compared with 5,682,000 in 1916, an increase of 298,000 pounds. Dressed meats handled over the lines amounted to 9,108,000 pounds in 1917, as against 7,866,000, an increase of 1,242,000. Dressed poultry shipments totalled 312,000 pounds during 1917, as compared with 282,000 in 1916. The percentage of increase for butter handled was 19 per cent., cheese 37 per cent., eggs 5 per cent., dressed meat 16 per cent., and dressed poultry 11 per cent.

AUSTRALIAN WAR SAVINGS CERTIFICATES

The interest return upon Canadian war savings certificates is much better than that upon those issued in Australia. The interest rate in Australia is 4½ per cent.; 17s. and 6d. will purchase a certificate for £1, and corresponding amounts will purchase certificates for £5, £10, £50, £100 and £1,000. The certificates are payable three years from date of purchase. They are exempt from wealth levy, Commonwealth and state stamp duty, interest is free of income tax, and they are payable to bearer. War savings stamps are also for sale in amounts of sixpence and two shillings and sixpence, and booklets are supplied free in which they may be affixed.

Slightly over 79 per cent. of the municipalities of Canada own and operate their own water supply systems.

DEVELOPING CANADA'S LIGNITE DEPOSITS

Government Operations Commenced on an Extensive Scale—Much Private Capital Lost in the Industry

One result of the critical fuel situation during the past year in Canada, has been that attention has again been directed to the extensive lignite deposits which are found in many parts of Canada. Many private attempts have been made to mine these deposits, but so far no success has been attained, and a considerable amount of capital has been lost in such enterprises.

An exhaustive study of the question has been made by the lignite committee of the advisory council for Scientific and Industrial Research. This committee recommends the establishment of a plant for briquetting the lignite; to be financed and operated by the Dominion, Manitoba and Saskatchewan governments. The plant should, it is maintained, be located in southern Saskatchewan, "at a locality where the lignites are of poor grade, with the idea that if it were successful at this point, it would undoubtedly be successful elsewhere in Saskatchewan and Alberta." The report of the committee will, it is stated, be issued shortly.

Mr. C. W. Peterson, deputy fuel controller, was recently in the west on official business and conferred with the various provincial governments and fuel administrators regarding coal supplies and the publicity campaigns which have been pushed in the west to encourage the early buying of the winter's coal supply. He attended a conference of coal mine operators at Calgary, where increased production and better preparation were the main subjects of discussion. Mr. Peterson stated that in the absence of serious trouble, it seemed likely that the lignite mines of Alberta would be able to cope with the added burden of supplying Manitoba and Saskatchewan with domestic fuel next winter.

The supplies of lignite appear to be enormous. The serious question has been whether they can be profitably operated. Regarding this point the report of the lignite committee, which is in preparation, states:—

"The art of producing carbonized briquettes has passed the laboratory stage and no further information can be got by laboratory methods. The producer must face the difficulties inherent in commercial production, which are approximately of the same order as those met with in the smelting of certain ores. The road to success in the briquetting problem is strewn with the wrecks of amateur attempts to do this apparently simple thing, which accounts for the fact that private capital is so chary of such enterprises. The problem, therefore, in Saskatchewan is one which should be undertaken by the government as a public utility, at least until such processes as may be adopted are demonstrated a commercial success."

The committee's estimates give $400,000 as the capital cost of the completed plant. Production costs at the plant for carbonized and briquetted fuel, covering operating costs and fixed charges, are estimated at not more than $7 per ton. In this estimate no financial allowance has been made for the recovery of by-products, which are stated to be large and valuable.

Lignite of high grade can be utilized for fuel without further treatment, although it is, of course, inferior to bituminous coal. The object of briquetting is to increase the fuel value and at the same time to utilize the by-products. One of the principal difficulties in establishing a plant of this kind in Manitoba or Saskatchewan, would be the fact that there is no large centre of population near the deposit, where a by-product, like gas, could be profitably disposed of.

A lignite plant established in Manitoba or Saskatchewan would have a large advantage in the way of transportation over competing sources of supply. The main sources of deposit in southern Saskatchewan are closer both to Winnipeg and to Regina than are either the Pennsylvania mines, or the nearest Alberta source of supply, which is Drumheller, Alberta. Developments have been carried on for some time near Estevan by a private company. Recently, the Interprovincial Coal Company, Limited, was incorporated under the Company's Act of Manitoba, and licensed in the province of Saskatchewan with a capital of $500,000. They have considerable deposits and a siding from the Canadian Pacific Railway station at Roche Percée, which almost adjoins their property. It is expected that present developments will be continued in the form of shipments of the highest grade of lignite, and it is planned to install a briquetting plant when sufficient capital has been secured. In view of the coal situation in the West, a market is assured, provided that the fuel can be produced at anything like a competitive price. The cost of development and of operations are at the present time so high, that a new company is forced to incur a relatively higher capital expense than one that was developed years ago.

FORESTRY FORETHOUGHT

Taking no thought for the morrow has been characteristic of Canada's forestry policy in the past. In the early days the forest was looked upon as an impediment to development, and great areas were ruthlessly destroyed by fire to make room for farms. Then for many years the lumber industry cut and culled the choicest timber without a thought as to the reproduction of the crop. Gradually, however, it was realized that only scientific cutting, combined with careful replanting, could prevent the exhaustion of the country's timber and pulpwood resources.

This realization was followed by a generation of debate concerning the methods of forest management that should be adopted. In spite of that, however, it was possible for Dr C. D. Howe, one of Canada's leading forestry experts, to say recently that: "We are woefully ignorant of many of the fundamental facts absolutely essential to the first tottering steps in the management of the timber resources of the country."

There is urgent need for a definite stocktaking of the commercial timber and pulpwood now available. Mathematical accuracy is not essential, but sufficient cruising and gathering of data should be completed to permit of reliable estimates being made. Such work has already been done by the Commission of Conservation in British Columbia. Similar work will be done in Ontario as soon as the funds are available and the necessary organization has been completed. Then, too, the provincial government of New Brunswick is engaged in making such a survey. As yet, however, only a partial methodical stocktaking has been made of the available pulpwood supplies of Quebec. Quebec has, however, the most important pulpwood area in Canada. The transportation facilities of the province, both natural and artificial, are excellent for the delivery of pulpwood and pulpwood products on the important markets in America and England.

Much additional information as to the amount, distribution and accessibility of these pulpwood areas should be ascertained. Then, measurements of each tree in typical areas set apart for that purpose, should be made from time to time to ascertain the natural annual increase in diameter under normal conditions in the forest. This information would make possible a close estimate of the probable duration of the supply.

But, unless there is a replacement of the trees removed, it is obvious that the supply can only last for one generation of trees. In a study of a limited area in the St. Maurice valley Dr. Howe found that balsam and hardwoods predominate in the new growths, and that spruce and pine are being steadily and surely depleted. By practising scientific forestry, and by discovering means for utilizing the hardwood forests profitably, much may be done to correct this defect. However, to improve upon nature, it is necessary to know how nature acts and reacts upon the thing we wish to improve. Thus far, no determined and sustained efforts have been made in Canada to get such data in regard to forests. It will be essential to discard the trust-to-luck-and-to-nature policy and substitute therefor a policy based on knowledge obtained by scientific studies of conditions.

CONFERENCE ON VITAL STATISTICS

A conference on vital statistics between representatives of the Dominion and provincial governments is being held, June 19th to 21st, under the auspices of the Dominion Bureau of Statistics. The object of the conference is to create a Dominion-wide scheme of vital statistics under Dominion and provincial co-operation.

Vital statistics are administered by the provinces, but the subject is more or less closely allied to the census and to the general scheme of population statistics. In the past, the provinces have carried out the work by different methods and standards, with the result that interprovincial and international comparisons are impossible, though some very important problems, including the regulation of immigration, the protection of public health, etc., hinge thereon.

The insurance and immigration departments and the Pensions Board of Canada will also take part in the proceedings, and the Actuarial Society of America, the Union of Canadian Municipalities and the Municipal Improvement League will be represented. It is also the intention to have a leading vital statistician of the United States present.

The Right Hon. Sir George Foster will open the conference at 10 a.m., Wednesday, June 19th. The conference will discuss the matter primarily from a scientific standpoint, and will lay down a detailed scheme for submission later on to the governments concerned.

An issue of $60,000,000 Armour and Company 6 per cent. debenture bonds has been sold to a syndicate of Chicago banks.

On the 3rd inst., Canadian railroads asked permission of the Interstate Commerce Commission to raise rates on business done on their lines within the United States, to the level provided by Director-General McAdoo under the recent road orders for American railways. So far no decision has been announced.

The Toronto bank clearings for the current week are $72,817,222, compared with $59,138,786 for the same week in 1917, and $52,113,201 in 1916.

INEQUALITIES IN TAXATION

A pamphlet has been issued by the Bureau of Municipal Research, Toronto, dealing with the question of inequalities in assessments. It is pointed out that "Inequitable taxation, even if low, is worse than high, though just, taxation, because it tends to give artificial advantage to some individuals, groups and localities over other individuals, groups and localities."

The injustice is not, of course, intentional, but is none the less effective. As the pamphlet points out, no reader of the daily press can fail to be impressed with the fact that there is widespread dissatisfaction, both with the present laws and with the method of enforcing them. The Provincial Public Roads and Highways Commission pointed out, in 1914, some inequalities of assessment between different municipalities, which may be summarized as follows:—

	Per cent. of assessed value on sale price.	
County.	Lowest percentage in county.	Highest percentage in county.
Elgin	29.2%	95.2%
Frontenac	23.0%	69.0%
Halton	45.0%	92.0%
Middlesex	27.2%	96.0%
Waterloo	30.2%	96.0%
Wentworth	6.2%	94.2%

The bureau submits the question whether a provincial commission for the equalization of assessments, as between and within municipalities, would be of service.

Regarding city assessments, an analysis of 66 sales of Toronto property in 1915 indicated as far as information was obtainable, that in the case of 32 sales of unimproved land, the total assessments were 39.2 per cent. of the total of the sale prices, and in the case of 34 sales of improved property, the total assessments were 67.9 per cent. of the total of the sale prices. In July of the same year, 26 unimproved properties were assessed at 51.8 per cent. of the total of the sale prices and 69 improved properties at 63.26 per cent. of the total of the sale prices. Sale price is, of course, an uncertain guide in many cases, and other sales might show results quite the opposite. It is certain, however, that such inequalities of assessment do exist.

The pamphlet also summarizes other questions of interest, such as, whether incomes other than salaries are assessed as completely as incomes from salaries; is unimproved property assessed as heavily in proportion as improved property? When properties exempt from taxation are sold, should not a certain percentage of the sale price go to the municipality?

CANADA FOOD BOARD

The Canada Food Board has passed an order which is expected definitely to prevent speculation in the produce business, and to limit profits to a reasonable margin over cost. On and after July the first, wholesale selling price of meats, lard, cheese, butter, oleomargarine or eggs, in selling to a retail dealer, is not to be more than 10 per cent. over the cost price; in selling to another wholesale dealer, the profit is not to be more than 4 per cent.

DISCOVERY OF NICKEL AND COPPER ORE

Extensive deposits of nickel and copper ore of a high grade, have been reported in the Eardley Mountains, near Luskville, Quebec. The discovery is on wild land that has been frequently prospected. The property is over 500 acres in extent, and it is not yet known how extensive the deposits are.

The British-American Nickel Corporation recently announced their intention of locating a nickel refinery at Deschenes, which is not far from the Eardley district. The company states, however, that they were at the time quite unaware of this deposit.

A Practical Pointer on Salesmanship

It is of first importance in good salesmanship to select a worthwhile article to sell, something about which you can become enthusiastic with a reason—a reason that will last. In Life Insurance Salesmanship, for instance, a discriminating agent would naturally select the policies of the Mutual Life of Canada because—first, the Company is well-established—Second, it has an unblemished record—Third, it has a continental reputation as a dividend payer—Fourth, it is a democratic organization—Fifth, it is a wonderfully successful going concern—and lastly, being the only Canadian Policyholders' Company its contracts find a ready market. Where a company is so favorably known one half of the trouble of making the sale is avoided. If you get the best goods in your line and go to it, success is certain. Last year our agents placed $20,000,000 paid-for business.

The Mutual Life Assurance Co. of Canada

FIRE PREVENTION IN ALBERTA

Carelessness is Cause of Most Fires—Number Can Be Reduced by Educational Methods

The Saskatchewan government is impressing upon the public, through the medium of the schools, the necessity for fire prevention.

A bulletin has been issued by Fire Commissioner A. E. Fisher, addressed to the school teachers of Saskatchewan in which an appeal is made for assistance in the publicity campaign on fire prevention. The bulletin reads as follows:—

"A fire prevention campaign is in progress at the present time, the aim being to reduce as much as possible the excessive fire loss which is suffered annually in this province. A very important feature in this movement is the education of our citizens along fire prevention lines. The influence of the school teacher in his or her district is fully appreciated. Will you assist in this educational propaganda by occasionally discussing the question of fire prevention with your pupils? They in turn will undoubtedly mention the subject in their homes thereby indirectly bringing this important subject to everyone's attention. Such a method would undoubtedly be effective in eliminating the causes of many of our fires, the majority of which are absolutely due to carelessness and are consequently preventable.

Most of Fires Could be Avoided.

"May I give you a few facts to show the absolute necessity of fire prevention:—

"(1) Our fire loss in 1917 amounted to $2,750,000. Over 50 per cent. of this loss was due to carelessness—burning rubbish, burning straw piles, children playing with matches, carelessly throwing down lighted matches, cigar and cigarette stubs, overheated stoves, defective stove pipes, defective chimneys, cleaning clothes with gasoline near stoves and open fire. Carefulness and inspection of property would eliminate this loss. This waste would equip 325 scout aeroplanes for use on the Western Front. Impress on your pupils the necessity of carefulness and attention to fire prevention.

"(2) Twenty-three lives were lost and 15 were severely burned.

"(3) Fire is the greatest ally of the high cost of living. Every fire destroys food stuffs which at the present crisis of our national history are invaluable not only to the boys overseas, but also to those who remain behind. Destruction of food stuffs by fire lessens the supply and the natural consequence is higher cost. Conserve what we have and thereby assist in reducing the high cost of living.

"(4) More money is required at the present time to replace property destroyed by fire than formerly. Protect and save what we have.

"(5) In 1917 we lost in elevator fires about two hundred and sixty-five thousand bushels of wheat. Approximately thirty thousand bushels have been destroyed in barn and granary fires. Do you realize the amount of bread that could be made from the total wheat loss. This loss is serious. Care must be taken to protect our grain supply.

"(6) Greater production is the slogan of the day. Why produce more if we burn up what we have. Greater production and fire prevention go hand in hand.

Means of Prevention.

"These few points will emphasize the necessity of fire prevention. Show your pupils how the elimination of carelessness will reduce our fire loss. Encourage each pupil to look around his home and see if the premises are clean, if the wood work is endangered by the close proximity of the stove or stovepipes. Talk fire prevention regularly to your pupils. Have the pupils of the higher grades write compositions on fire prevention. In your talks use these war-time and peacetime suggestions:—

"Clean-up.

"Oily rags and waste should not be left lying around the barn.

"Never neglect to have flues cleaned, examined and re-
Sired at least once a year
Kitc."Stove pipes should not pass unprotected through wooden
ns.
Totarish should not be permitted to accumulate in base-
anywhere else about the premises.
The Torontperty at regular intervals.
$72,817,222, com
1917, and $52,113,

"Children should not play with matches.

"Trash should be removed without delay.

"No smoking should be permitted around barns or granaries.

"Handle gasoline with caution. Every time you fill the tank of an auto or tractor with gasoline by lamplight or an open light you are inviting a loss.

"Oil stoves and lamps should be filled only in daylight and never near an open light or fire.

"Only properly cured hay should be stored in barns. Spontaneous combustion destroys many barns.

"Fire is the Kaiser's best friend.

"Your co-operation in this great campaign is earnestly requested. You can awaken a provincial wide interest in this campaign if you will 'do your bit.' Are you willing to assist. If any information is required along the lines of fire prevention write the fire commissioner's office and same will be gladly given you.

Clean-up Week.

"Mr. A. E. Fisher, fire commissioner of the province of Saskatchewan, has billed the whole province with notices calling upon our citizens to clean up their property in order that the fire loss may be reduced.

"Judging from reports which have been received by the fire commissioner the interest of our citizens in this general clean-up movement is certainly most commendable.

Prairie Fires.

"The number of prairie fires which have occurred this spring show conclusively that our farmers are rather careless in the matter of the spring burning. The fire commissioner is preparing leaflets relative to prairie fires and spring burning which will be sent to all secretary treasurers of municipalities. This leaflet is of such a size that it can be easily placed in the envelope with tax notices. This will draw the attention of the public to the requirements and penalties of the law."

ESTIMATE PULPWOOD RESOURCES OF CANADA

The following table shows the approximate amounts of certain classes of pulpwood material now standing in the several provinces of Canada. All sizes of the species named are included. It represents, to some extent, a compromise between the guesses made by various individuals or organizations in the past, and information relating to partial areas based upon investigations actually made in the field:—

	Cords.	
Nova Scotia	30,000,000	spruce and balsam
New Brunswick	33,000,000	" " "
Quebec	300,000,000	" " "
Ontario	200,000,000	" " "
Total for Eastern Canada	563,000,000	
Prairie provinces	85,000,000	" " "
Prairie provinces	100,000,000	poplar
British Columbia	285,370,000	Sitka, spruce, western hemlock, balsam and cottonwood.
Total for Western Canada	470,370,000	
Total for all Canada	1,033,370,000	

In considering this table certain allowances must be made in arriving at commercial possibilities. In the first place, vast amounts of material of suitable size for pulpwood are so situated as to be commercially inaccessible. In other cases, bodies of timber of limited size are so scattered as to make profitable operation impracticable. Further, balsam does not float readily for long distances, and heavy losses result from sinking where long drives are necessary.

Another factor, sometimes overlooked, is the heavy demand upon these forests for purposes other than the cutting of pulpwood. The greatest of these is for the manufacture of lumber, for which very large amounts of spruce and balsam are used annually in Eastern Canada.

It is understood that negotiations are being completed for reopening the Ross rifle plant at Quebec, which has been idle since March, 1917, and pistols will be made on United States orders.

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

CLEAVAGE IN CANADIAN CAR AND FOUNDRY COMPANY

(Continued from page 16)

aggregating considerably over one million dollars. This was, in no sense, a bonus or commission, as the circular falsely states. Moreover, on a previous occasion, Senator Curry endorsed notes of agency of Canadian Car & Foundry Company, Limited, in New York, in the amount of five hundred thousand dollars, without security and without compensation. This agency company was a subsidiary formed for the purpose of handling the Russian contracts, and the shareholders have been benefited by this financial assistance.

"The directors are confident that no fair-minded shareholder will dispute the propriety of their action in this matter. The so-styled committee states that it has invited the co-operation of the present management to elect several "independent directors."

"What was in fact suggested to the management by certain of these gentlemen was that they should be permitted to nominate the majority of the board and in this way be given control of the company; and, in particular, they insisted upon the election of Senator Beaubien and Mr. A. Hicks Lawrence, as directors. They stated that if an assurance to this effect, was not forthcoming, a campaign would be commenced to obtain proxies in opposition to the present board. The directors replied that no such assurance could or would be given, the matter being one for the shareholders to decide. The present attack on the management is the result.

The question of a dividend policy has been most carefully considered, and the best answer the directors can make to the so-styled committee's criticism is the circular recently sent to you by your president. The liquid assets of the company fully justified the recent declaration of a 3½ per cent. payment on the deferred preference dividends. The seven months' statement for the current fiscal year, which will be issued to shareholders on or before the date of the annual general meeting on July 15th, will unquestionably show that the action of the directors in this respect was a conservative one.

"The undersigned directors consider it unnecessary to refer further to the statements contained in the circular, otherwise than to say that they deem these statements so misleading and damaging that they have instructed counsel to demand an immediate retraction and apology from those responsible for the publication of the circular."

The reply is signed by K. W. Blackwell, W. F. Angus, G. E. Drummond, W. W. Butler, R. H. Parks, V. G. Curry, and F. A. Skelton, directors of the company.

Commenting on the subject, Mr. F. A. Skelton, the vice-president and treasurer, points out that the company's affairs are progressing very satisfactorily at the present time, its order books are well filled, and a period of great prosperity evidently is in front of the company, unless unforeseen difficulties with regard to obtaining labor and materials prevent it from utilizing its present organization to the fullest possible advantage.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first week of June:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
June 7	$2,927,000	$2,846,000	— $81,000

Grand Trunk Railway.

	1917.	1918.	Inc. or dec.
June 7	$1,333,194	$1,383,669	+ $50,475

Canadian Northern Railway.

	1917.	1918.	Inc. or dec.
June 7	$ 908,700	$ 847,100	— $61,600

The city council of Ottawa has proposed to the Ottawa Light, Heat and Power Company, that the city acquire its holdings and interests, and operate the amalgamated concerns as a municipal plant. At a recent meeting of the company, it was decided to have an appraisal made of all the stock and assets of the company with a view to carrying on further negotiations with the city.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

BOOKKEEPER, ACCOUNTANT, BANKER, OFFICE MAN.—Become an expert in your chosen profession. The demand for high-grade trained men is keen. The trained man is not only able to respond and make good when opportunity presents itself, but has the power within him to create opportunity. Mail instruction in Higher Accounting, Chartered Accountancy (C.A. Degree of every province), Banking (Degree of Canadian Bankers' Association), Auditing, Business Law, Cost Accounting and Bookkeeping. Satisfaction assured—highest endorsements of successful students. We also teach—Commercial Art—Advertising—Show Card Writing—Salesmanship —Story Writing and Journalism—Civil Service and all Commercial Subjects. Write us for particulars (Department M.T.) Shaw Correspondence School, Toronto.

MOOSE JAW RENTAL AGENTS.—The Ralph Manley Agency, Limited, Walter Scott Block, Moose Jaw, handle the renting of Moose Jaw Improved City Property. Their facilities permit them to rent and re-rent property as well as looking after collections and any necessary repairs. Established 1908. Correspondence solicited.

FIRE INSURANCE head office, Toronto, requires man experienced in examining and passing business, and capable of handling agency correspondence. All replies treated confidentially. Apply Box 185, *Monetary Times*, Toronto.

MAPPING CLERK WANTED. — Fair knowledge of plans, rates and policy drafting generally. Apply personally or by letter, General Fire Assurance, Room 101, Continental Life Building, Toronto.

TIMBER LIMITS FOR SALE.—We have for sale, at a very attractive price, three excellent Timber Limits in British Columbia, comprising approximately 2,000 acres. These Limits will cruise 56,000,000 feet, of which 13,000,000 feet is Cedar and the balance Hemlock, Balsam, Spruce and Cypress, all of which is virgin. These Limits are accessible to deep water transportation and located only 150 miles from Vancouver in a sheltered bay. Absolute title, guaranteed by the government, will be given purchaser. This is unquestionably one of the best Timber investments in Western Canada. We can furnish blue prints and engineer's report to anyone interested. F. Griffin & Company, Yorkshire Building, Vancouver, B.C.

ALLIANCE INSURANCE COMPANY OF PHILADELPHIA

Assets, reserve and net surplus almost doubled is the record of the Alliance Insurance Company, of Philadelphia, during the past eight years. The total assets are now over $3,000,000, and consist mostly of bonds and stocks at their market value. The capital stock of the company is $750,000 and the reserve for reinsurance almost $1,000,000. Considerable reserves have also been set aside for unpaid losses for national and other taxes and for the contingent fund, in addition to which there is also a surplus of $750,000. The surplus of policyholders is $1,624.824. The following figures illustrate the growth of the company during the past eight years:—

Jan. 1st.	Gross assets.	Reinsurance reserve.	Net surplus.
1910	$1,632,376	$558,513	$454,444
1915	2,399,489	673,641	773,097
1918	3,114,009	978,627	874,824

The company has been engaged in business for over thirteen years, and writes fire, marine, automobile and miscellaneous insurance. It entered the Canadian field about two years ago, and its chief agents in Canada are Robert Hampson and Son, Montreal. Messrs. Parkes, McVittie and Shaw, of Toronto, are the agents for Ontario.

Motorize Farming This Year!

Increase in Acreage—Large Immigration Into Canada—Possibilities of Wheat Growing in Canada are Enormous—Plenty of Land at Low Prices For Immigrants — Machinery is Beginning to Revolutionize Farming—Inventions Come at Opportune Time.

By **CHARLES W. STOKES**

"CANADA must grow more wheat this year." But merely to repeat this non-arguable fact does not bring one single additional acre under cultivation. The desired end—more wheat—can obviously be attained only by one or both of two methods, either more wheat per acre or more acres under wheat.

The first, depending as it does upon causes mostly beyond human control, can be omitted from this discussion. The second is therefore the only logical solution. Either the man who is growing wheat already must grow more, or else the man who isn't growing it must grow some now.

The Canadian farmer in 1917 grew 234 million bushels, which was less than he grew in the two preceding years but probably the best he could do in the face of natural obstacles. With both patriotic and pecuniary motives to actuate him, practically every Canadian farmer who can grow wheat is doing so. Limited as he is by the possession of only one pair of hands, he has probably reached the limit of what he can grow unless he relinquishes some other branch of agriculture—in which case there would result a storm of indignation at the then-impossible prices of bacon, eggs, milk, vegetables and beef.

The number of wheat-growers has, of course, increased to some extent. Sixty-one thousand immigrants entered Canada from the United States last year, amongst whom were a large number of agriculturists—a larger proportion, indeed, than in most previous years. In the three prairie provinces, whither most of these immigrants went, there was in consequence a large amount of new land broken. There will be a great many more immigrants coming in this year, war or no war, for wheat prices are high, prairie land is cheap, and a good crop will pay for the land in the first year.

Probably, too, the back-to-the-land publicity has borne some fruit. Probably a certain number of city workers, partly in a desire to help the cause, partly attracted by the profit of raising wheat at a fixed price of $2.21 per bushel (with a not-distant prospect of an increase), partly to beat the high cost of city living, are now growing wheat. Let us hope so, at any rate, if only for the reputation of publicity.

But even then—

This is the day of "even thens." Notice, for example, that when the British War Minister wants 800,000 more men, he pays a splendid tribute to what has been done to date, but concludes "Even then—"; and gets his men. In 1917, Canada had nearly 15 million acres producing wheat, nearly fourteen of which were in the prairie provinces; but even then there are 1,400 million acres in Canada, without going to the trouble of including the Yukon and the North-West Territories.

It would, of course, be ridiculous to suggest that every one of these acres should be producing wheat. Millions of them are already producing something else indispensable, such as bacon or beef; other millions are afforested, rocky, mineral-bearing, clay, swamp, alkali or unsuitable. Yet unless there are not numerous other millions still remaining that should be producing wheat, Canada would not be in the colonization game—would not be able to justify its slogan of "The World's Future Bread Basket," for 234 million bushels, while they sound like a big quantity, are but a drop in the bucket of the world's needs.

The prairie provinces, for instance, have an acreage of 460 million. The estimate has been made, and as far as I know has never been disputed, that 200 million acres are suitable for cultivation. The area actually cultivated to all crops, according to the incomplete data that can be collated from government statistics, is about 20 million acres; that is to say, about 10 per cent. of the estimated resources. In other words, at this, the most stupendous moment in the history of the world, 90 per cent. of the best wheat land in the British Empire, capable of producing enough food to feed for a year, at the most modest computation, from 300 to 400 million people, is lying idle.

Conscript it? This demagogic solution is characterized by a certain ineptitude when it is remembered that while there are speculators in land the same as there are speculators in stocks and in food, the majority of this land is held either by the government, who will readily give any non-teutonic male over eighteen years of age 160 acres of it free, or by owners who would readily sell it to anyone who could pay the current market price. To discuss the reasons for the great amount of "speculative" land that is now on the market would take too long; in brief, it can be said that there are very few speculators who would not now sell at the market price. In fact, a questionnaire sent out by a large developing agency to non-resident owners of western land reveals that many such owners would consent to any reasonable arrangement, even the bare remission of taxes. Confiscating this "speculative" land would be a waste of time unless every acre of it is laid under contribution to the need of the hour, which is to grow more wheat.

It can be laid down as a broad principle that every western farmer is farming as much land as he can handle. Numbers of them have during the past two or three years invested much of their profit from high-priced wheat in more land—many are actually holding at this moment more than they can properly manage. What is wanted is not land, but labor.

There are those who say the labor problem will adjust itself. The chief attraction to labor is always its compensation; and with the slackening of munition work there is the possibility of a movement towards agricultural work. Last year Alberta farmers paid an average summer wage (according to government statistics) of $76.09 per month including board.

But even then, are we much nearer averting the danger of world-starvation, which, according to an economic pessimist, is due for three years hence if the war keeps up that long? The real problem is to speed up production not by putting more men on the land to produce in the same ratio as their predecessors, but to contrive that each man, new and old, will produce more per head.

Farm labor concentrated on a small area is intensive and non-expansive in output. It is his family of growing boys which enables the small farmer to dispense with a hired man—only that and nothing more. But the output of farm labor can be increased per head spread over a larger area and motorized. Ten men cannot plough a 1,000-acre field any quicker than one man can plough a 100-acre field—with horses; but two men can plough a 1,000-acre field considerably quicker—with machinery.

Therein probably lies the chief hope for more wheat. Is it entirely impracticable that these millions of acres of land which lie idle through no fault of their own, nor generally of their owners, could not be brought under cultivation this year by a gigantic program of contracting? There are any number of farming contractors in Western Canada, most of whom are open and able to accept more work; but the average contractor requires—and reasonably—quick payment, which may range from $500 to $2,000 per quarter-section, and as things are at present, there are few "speculators" who could put up that amount. Private or public financial backing might be made available—and surely the financing of wheat-growing is a legitimate outlet for national money; but failing any movement to provide such backing, is it impossible that the Dominion of Canada could not come to a reasonable arrangement with the owners of this idle land for it to be used this year by the Dominion of Canada, to grow more wheat by motorized means?

To "syndicate farming"—which means, broadly, farming by machinery on a large scale—many objections, mostly social, can in normal times be consistently urged. These, however, are not normal times. Machinery is even now breaking land in England where most kinds of machinery were never known before. The Allies want the wheat; we have the land, we can get a reasonably large quantity of machinery, we can, by making farm labor sufficiently attractive, get the labor. Not to bring these elements into combination is to make our own resources an idle boast.

OIL-PRODUCING DEPOSITS OF CANADA

Many Deposits of a Low Grade—Very Little Attempt at Development

The "United Empire," the magazine of the Royal Colonial Institute, in describing the oil resources of the empire, outlines those of Canada as follows:—

New Brunswick.

For many years the oil-shales of New Brunswick have been known, and schemes for their utilization have frequently been put forward. They are true oil-shales, but in a much fresher or less inspissated state than the Scottish oil-shales—as much as 2.3 per cent. being soluble in petroleum spirit. The quantity of shale in well-worked seams, proved at outcrop in borings and in mines, is enormous; while it is doubtful whether more than a fraction of the oil-shale area has been fully prospected. Exhaustive tests have been made, with the result that yields of crude oil of from 27 to 48 gallons per ton have been obtained; while ammonium sulphate has been produced at the remarkable proportion of 77 lb. per ton. This latter result was obtained in a large scale test by the Pumpherston Oil Company. These results compare very favorably with the 22 gallons of crude oil and 42 lb. of ammonium sulphate yielded by Scottish shales. The material is too rich for the ordinary Scottish-type retort, but would lend itself admirably to a lower-temperature method.

In Albert County one of the best fields could be mined for a number of years by open-cast work with steam diggers. Schemes for mining and retorting anything from 1,000 to 6,000 tons per day have been suggested in this locality, and a government scheme of development has been promulgated. Several of the fields are close to tide-water, and are traversed by railways.

Similar oil-shales, though possibly not quite so rich, are known in Nova Scotia. The latest news from that province is that a field conveniently situated for transport is about to be opened up, and a new form of retort capable of dealing with 300 tons per day is to be erected. This, however, is a mere beginning.

Quebec.

In the province of Quebec oil-shales have been identified, but no serious attempt has yet been made to develop them.

Alberta.

The great tar-sand outcrops of the Athabasca River, Alberta, though not oil-shales, but inspissated asphaltic oil-sands, offer what appears to be an excellent field for low-temperature distillation. The amount of material is practically inexhaustible. and it sometimes contains as much as 15 to 18 per cent. of hydrocarbons. A good yield of oil at a low temperature could be obtained. and the residue utilized to some extent in glass-making, etc. There is reason to believe also that a fair yield of ammonium sulphate could also be obtained.

There are other deposits, not yet fully studied. that might add to the quantity of retortable material in Canada; but these brief notes are sufficient to indicate what large virgin fields await exploitation. The Nova Scotia and New Brunswick areas, on account of their comparative proximity to the United Kingdom, are of the greatest importance.

Newfoundland.

Oil-shales of promising type have been discovered in Newfoundland, but have been neglected, chiefly owing to attempts, hitherto unsuccessful, to develop oil-fields. No complete account of the oil-shales has been published, but the quantity is said to be large.

FRIENDLY SOCIETIES IN ONTARIO

Results of Life, Sick and Funeral Benefit Insurance in 1917—Total Insurance in Ontario is Over $150,000,000.

According to the annual report of the Ontario Registrar of Friendly Societies, there are twenty-seven societies writing life insurance in Ontario, and one hundred and thirty-five writing sick and funeral benefits. A summary of the life business is given on this page.

The largest life business is written by the Canadian Order of Foresters, followed in order by the Chosen Friends, Oddfellows Relief, United Workmen, and Maccabees. The latter, however, has much the largest total business, its insurance in force totaling $359,824,687. The Royal Arcanum and the Catholic Order of Foresters also have large totals of $246,382,161 and $150,942,500 respectively.

The following societies write life insurance in Ontario only:—Commercial Travellers' Association; Knights of Malta; Mutual Masonic Compact; Ontario Commercial Travellers' Association. Total benefits of $2,719,906 were paid during the year.

Of the societies paying sick and funeral benefits, the majority are associations of employees, the remainder consisting of religious or social organizations. Their business is summarized as follows:—

Number of members	172,020
Deaths during the year	3,500
Amount paid in funeral benefits	$189,658
Number of members sick	33,468
Number of weeks' sickness	166,812
Amount paid for sick benefits	$811,774
Amount paid for medical attendance	90,621
Amount paid for special relief	61,229
Assets at 31st December, 1917	3,923,377
Liabilities	108,754

Short Name of Society.	Total membership in Ontario at 31st December, 1917.	Amount of Insurance in force in Ontario at 31st December, 1917.	Number of Certificates in force anywhere at 31st December, 1917.	Amount of Insurance in force anywhere at 31st December, 1917.	Number of Claims matured in Ontario in 1917.	Amount of Insurance Benefits paid in Ontario during 1917.	Amount of Disability Benefits paid in Ontario during 1917, including pensions and gratuities.	Assets in Ontario at 31st December, 1917.	Liabilities in Ontario at 31st December, 1917.	Total Assets anywhere at 31st December, 1917.	Total Liabilities anywhere at 31st December, 1917.

(a) About. (b) Gratuities and Pensions.

CROP PROSPECTS IN SASKATCHEWAN

The statistics branch of the department of agriculture, province of Saskatchewan, gave out on the 10th instant the following information regarding the wheat crop of the province:—

The average height of the wheat was from four to five inches, oats from two to three inches, while barley was just through the ground, or one or two inches in height. The warm weather of the preceding few days was just what was needed for the growing grain, and crops generally were in good condition. The only damage reported was that resulting from the frosts and windy weather a few weeks previous, and much of this damage had been repaired by reseeding. Cutworms had also been noticed in some parts.

CANADIAN WAR SAVINGS STAMPS

It has now been practically decided that war savings stamps will be issued by the Dominion government, although they may not be on sale for some time. The scheme has been successful in England and in the United States. It is reported that Sir Herbert Ames, M.P., will have charge of the arrangements.

An order-in-council has been passed prohibiting the export from Canada of hides and leather. The order is, it is reported, due to depletion of Canadian stocks. Another order has been passed prohibiting the export of tires for motorcycles and motor vehicles except under license issued by the customs department on the approval of the War Trade Board.

GAS COMPANY INVESTIGATION

Increase of Rates Has Been General Throughout Ontario —Cost of Operation is Higher

Some time ago the Consumers' Gas Company of Toronto, applied to the city council for permission to increase its rates. The council requested the city auditor, Mr. Walter Sterling, and the commissioner of finance, Mr. Thomas Bradshaw, to make an investigation. Their report was submitted to the council a short time ago, and contains important information, not only regarding the operations of the Consumers' Gas Company, but also of other companies, introduced for comparative purposes.

The capital stock of the company is now $5,256,465. Since 1887 the new capital issued has been as follows:—

1887—	$200,000.00	was subscribed	at	$180.32	per each $100.00
1889—	125,000.00	“	“	176.60	“ “
1889—	175,000.00	“	“	175.10	“ “
1891—	100,000.00	“	“	168.25	“ “
1893—	100,000.00	“	“	183.04	“ “
1900—	50,000.00	“	“	215.47½	“ “
1903—	50,000.00	“	“	209.15	“ “
1903—	100,000.00	“	“	192.86	“ “
1904—	100,000.00	“	“	200.00	“ “
1904—	250,000.00	“	“	210.00	“ “
1906—	250,000.00	“	“	200.75	“ “
1907—	300,000.00	“	“	190.66	“ “
1907—	450,000.00	“	“	180.44	“ “
1909—	250,000.00	“	“	203.91	“ “
1910—	500,000.00	“	“	199.99	“ “
1911—	384,500.00	“	“	192.64	“ “
1913—	340,500.00	“	“	166.84	“ “
1913—	157,000.00	“	“	161.95	“ “
1917—	478,700.00	“	“	150.00	“ “
	$4,360,700.00	Average price		$184.50	

Thus the average amount paid by shareholders for each $100.00 during the last thirty years is $184.50. Dividends are limited to 10 per cent. per annum upon the par value of the stock, not upon the amount paid therefor. The average income return therefore upon the shareholders' investment is 5.42 per cent.

The low price obtained in 1917, namely, $150.00 per $100.00, was undoubtedly due to the general decline in market values which had taken place in practically all public utility securities, and to the higher income return which investments generally yielded. While in 1909 and 1910 investors regarded a yield of 5 per cent. as a reasonable one for such a security as the stock of the Consumers' Gas Company, and were willing, therefore, to purchase new shares at $200.00, to-day 7 per cent. is regarded as the return which the stock should yield, $144.50 being the market price thereof. These facts are mentioned in explanation of the view held that the company should continue to receive about $200.00 for each $100.00 of new stock sold, as it did years ago; also to point out that while in the past the company could secure new capital moneys at a cost of about 5 per cent. the rate is now nearer to 7 per cent., or an increase of 40 per cent.

Reserve Fund.

The reserve fund in 1915 stood at $3,534,532.00, and now amounts to $3,525,833.00. An examination has been made to determine from what source the fund has been built up. It has been clearly determined that it represents only the premium on capital stock, and has not been accumulated out of the earnings or profits of the company. It represents the excess over par which shareholders have paid for their stock, and therefore is part of the shareholders' cash contribution in the enterprise. If it had been accumulated out of profits, then it would have been necessary to have investigated the effect that such accumulation had upon the price now being charged for gas, to consumers.

Plant and Building Renewal Fund.

The plant and fund is regulated by the company's charter, which provides that it is entitled to carry to it annually 5 per cent. of the value of the plant and buildings in use by the company. There is charged against it all repairs and renewals required to be made to plant and buildings. It has accumulated as follows during the past four years, ending January 31st:—

1915	$1,255,004.00
1916	1,412,257.00
1917	1,537,820.00
1918	1,662,972.00

It might be surmised that the fund is being unnecessarily increased, but when it is remembered that practically all companies have been withholding making important repairs, renewals, extensions, etc., during recent years, owing to the abnormally high cost of money, labor and material, it will be realized that to insure the future continuance and efficiency of the undertaking it is essential that the fund shall be maintained in a strong position, so that when normal conditions prevail the company may proceed with improvements and extensions which have been temporarily deferred. Then again, it must be remembered that at certain intervals in the life of such a utility, extensive and costly work has to be done which far exceeds the annual increment to the fund; and therefore preparation must be made for such emergencies. Not only is the company, by statute, permitted to maintain this fund, as it is doing, but, in our judgment, it is in the interest of the consumer that it should do so, and especially during such abnormal times as we are now passing through.

Results of Operations.

The investigation of the operations of the company for the years 1915 and 1016 reveals the following: After deducting from earnings: operating charges, the dividends to shareholders, and plant and building renewal fund appropriation, there was a deficit for the year ending September 30th, 1915, of $143,274.00; and for the year ending 30th September, 1916, of $97,792.00; both of which deficits were charged to the reserve fund. In the year ending 30th September, 1917, the earnings of the company did not permit it to set aside the full statutory 5 per cent. to plant and building renewal fund; otherwise there would have been a deficit of $46,311.00, which therefore may be regarded as the deficit for that year.

These deficits have had the effect of reducing those funds to an amount below what they should normally be, and it is quite evident that a continuance of this policy would not only be a serious matter for the future welfare of the company, but also for the consumer.

Cause of Deficits.

In order to determine the cause of the deficits referred to, an examination has been made into the chief items which enter into the cost of operation.

In 1917 there was utilized 211,320 tons of gas coal, which for our purposes may be assumed to be the amount which will be consumed in 1918, although it is claimed that in view of the greater demand for gas, a larger volume will be required. The increase in the price of gas coal, compared with that paid in 1915 is $2.3443 per ton. This represents an excess cost for gas coal alone of $495,397.48 or 63 per cent. The quantity of gas oil consumed in 1917 was 4,810,688 gallons; the increased cost per gallon over that paid in 1915 was 3.894 cents, or a total of $187,328.19, an increase of 81 per cent. The amount of fuel consumed in 1917 was 126,726 tons; the increased cost per ton over that paid in 1915 was $1.511, which represents a total increase in cost of $191,483.00, or 40 per cent. The price paid for labor, according to an analysis made, has increased 42 per cent. since 1915, which represents an increase of $192,426.00. Taxes have increased $73,214.00 since 1915. Thus, the aggregate increase in cost of operation, as compared with conditions in 1915, will amount to no less than $1,139,849.00.

A comparison was also instituted of costs in 1916 with those prevailing in 1918. As in the previous comparison, the same quantities of supplies for 1917 were taken as a basis for 1918 expenditure. It was found that the aggregate increase in cost of the several items previously enumerated will amount to $1,076,766.00.

And then, again, a comparison was made of costs in 1917, with those now prevailing, on the same assumption as to material and labor, when it was found that for 1918 the cost will be $595,076.00 in excess of that of 1917.

THE MOBILIZATION OF LABOR

The acute situation that has developed in the labor market, both in Canada and the United States, again brings to the fore the perennial problem of properly mobilizing the nation's labor power. The outbreak of war found Canada faced with a serious situation, in which unemployment and the closing down of industries brought the country to the verge of an economic crisis. The same situation arose in the United States, giving the utmost concern to the authorities everywhere. For a time attention was centered upon the problem of finding work for the unemployed; but the sudden expansion of war work reversed the whole situation and submerged the problem, for the time being, of how best to co-ordinate the labor and industry of the nation.

It is a problem, however, that will not down. It has been extremely difficult since the outbreak of war to find the labor essential for carrying on fundamental war work, both in manufacturing and in agriculture. In the latter, the most difficult phase of the situation is the securing of labor for seeding and harvest. Agriculture, no doubt, is the outstanding example of a seasonal occupation; but there are also many seasonal trades which cause a surplus of labor to emerge at more or less regular intervals. This labor, in the past, has been largely wasted; and there has been also an extravagant waste of labor energy through under-employment, over-employment and the failure, in general, to adequately co-ordinate the labor and industry of the nation.

While the several provinces of the Dominion, and the individual States of the Republic, have had labor bureaux of one sort or another for the providing of men with jobs, and jobs with men, nevertheless, these vital functions have been but poorly performed. Ontario has made a splendid beginning; but the other Canadian provinces lag far in the rear, in the solution of this problem. The truth seems to be that the efficient directing of the country's labor force can be accomplished only under federal authority. The United States has afforded sufficient example of the inefficiency of purely local administration of surplus labor.

A system of federal labor bureaux would effect many economies and cut down the expenses of administration, because directed by a single executive head. It is reasonable to expect that a superior personnel would be secured under the federal supervision of labor bureaux, since those employed therein could be brought under the scope of the Civil Service Act. Moreover, it is necessary to take the national view of the labor problem; to rise above local prejudices; to win the support of organized labor; and, above all, to swing the prestige of the federal government and parliament behind the whole scheme. But, whatever the best solution may be, it is of imperative importance that the problem be attacked now, to the end that our economic life shall not be dislocated at the close of the war.

RECONSTRUCTION IN UNITED KINGDOM

The British Labor Party, a short time since, gave to the world its programme of political and economic reconstruction after the war—a programme which, if carried into effect, is destined, according to the belief of Mr. Arthur Henderson and his confrères, to lay the foundations of a new social order. No doubt the labor parties and the Socialists of Europe expect peace to usher in full democratic control; but they are likely to be disappointed insofar as changes of a fundamental nature in diplomacy, politics and industry are to be accomplished overnight.

Specifically, the British Labor Party demands the enforcement of a minimum wage for all workers; the democratization of industry by giving labor a voice in its management; the shifting of taxes to large incomes and fortunes made during the war; and the appropriation of the surplus wealth of the nation for the common good. These are glittering phases. To what extent can they be translated from the realm of theory and speculation into the hard facts of everyday life?

At the conclusion of the war the United Kingdom will face a stupendous task in dealing with the demobifization of 8,000,000 workers, 5,000,000 of whom are at present engaged in military and naval service. To throw this vast labor force upon the country at a time when war orders have ceased, would effect economic paralysis. The British Labor Party has at least made one constructive proposal—that plans be immediately perfected for the carrying on of great national works, so that unemployment will not be permitted to develop, at least to any appreciable degree. The government of the United Kingdom has itself declared its intention of spending £300,000,000 sterling upon the building of cottages for the working class. Great power stations for the development and distribution of electrical energy may also be undertaken, as well as the extension of the nation's system of light railways and canals. It is obvious that, if national enterprises on a huge scale are started, the demand for materials from private industry will gradually result in the re-establishment of the normal trade and industry of peace.

We are not at all convinced that the war has demonstrated the superiority of State administration over private enterprise, or the capacity of uniformed masses of men to direct and control industry. As for a minimum wage, it is clear that labor cannot get more than it produces—and not even all that it produces; for otherwise capital would not be attracted to fields that prove unprofitable. Inordinate labor demands will kill industry, both domestic and foreign; for it is plain that a high level of wages, and excessive costs of production, diminish a nation's power to compete in the neutral markets of the world. The future of labor is to be found, not in short hours, inefficient work, and artificial wages, but in technical and trained efficiency and increased production. A just return to capital, commensurate with the risks of industry, and the loyal co-operation of trained and efficient labor will do more to safeguard the standard of living and advance true democracy than the vaporings of any Bolsheviki class, whether at home or abroad.

CANADIAN MANUFACTURES AND THE TARIFF BOARD

The Canadian Manufacturers' Association appears to have definitely decided to reopen the tariff issue. The plan of campaign has been very thorough, and involves not only activities of the association itself, but also of co-operating organizations. A few weeks ago the Canadian Industrial Reconstruction Association was formed, with the avowed purpose of considering after-the-war problems of industry and trade. The president of the association is Sir John S. Willison, and the directorate is practically identical with Canadian manufacturers' interests. Now it has been proposed that a tariff board should be created, which would be a government body having for its duties the investigation of tariff questions.

Mr. S. R. Parsons, in his speech last week, at the annual meeting of the Manufacturers' Association, presented a strong case for the interests of manufacturers in Canada. Generally speaking, no use was made of any "infant industry," or other time-worn arguments. He presented his case straightforwardly as in the interests of Canadian manufactures. What he did succeed in doing was in pointing out the prominent patriotic part which they have played in the war, and certain reasons why their interests should be maintained.

Whether it is intended that a general programme of higher tariffs will be put forward, remains to be seen. According to the manifesto of the Canadian Industrial Reconstruction Association, this would seem to be the case. The present is, however, a decidedly inopportune time for a program of this kind, and it would inevitably lead to the breaking up of the Union Government and of a recurrence of party politics more bitter than before. If, on the other hand, it is merely the intention to maintain the present degree of production, the activity on the part of the manufacturers would seem to be somewhat unwarranted. The agricultural interests in Canada have, without doubt, advanced enormously during the past few years, both in organization and in prosperity, but, as yet, there has been no organized attack upon protection. It may be the intention of the manufacturers to anticipate a move of this kind, but this is not yet known.

In view of the condition of the national finances, the reduction of any source of revenue is not probable. Judging from the last budget speech, moreover, it is evidently the intention of the government to evade the issue entirely, and to regulate trade by direct action in the way of embargoes and other trade restrictions.

THE BUSINESS PROFITS TAX

With a view to encouraging discussion of the business profits tax, the Toronto Bureau of Municipal Research has issued a pamphlet requesting opinions of it. The bureau mentions the four test questions as to the desirability of any mode of taxation. These questions are: First, Is it equitable, that is, capable of being levied with fairness? Second, Is it convenient to collect? Third, Can it be collected economically? Fourth, Is it conducive to the public benefit?

The pamphlet quotes the answers given in 1912 by the president of the Ontario Municipal Association. Regarding the first question, he states that the business tax is not levied according to whether the individual is or is not able to pay it. It is levied if the property is put to good use and is not levied when the property remains idle. There seems, in fact, to be a general impression that a business profits tax discourages industry and the profitable use of capital. If the business tax were the only tax we had, unquestionably this would be the case, and there would be a tendency for property to be left idle, which otherwise might be actively employed. When, however, substantial property taxes are levied, the same argument does not hold. It could equally be applied to the income tax for the latter places a tax upon abilities profitably and usefully employed, while it leaves untouched those which remain in idleness. The same thing would apply to income derived from investments according to whether it were intelligently and wisely invested, or merely remained comparatively unproductive.

As to the second question, it will be admitted that the collection of the tax is attended with some difficulties. These difficulties are, however, almost entirely confined to the matter of assessment and they are no greater in this case than they are frequently in the assessment of income or property taxes. The same may practically be said regarding the third question. In answer to this one, the president of the Ontario Municipal Association referred to the frequent cases when the premises at the time of collection were occupied by persons other than those who occupied them at the time of assessment. This is, no doubt, an objection, but it is merely a question of detail, and does not affect the equity or inequity of the tax.

EVILS OF OVER-INSURANCE

Fire Chief Tremblay, director of public safety of the province of Quebec, stated recently that many city fires have occurred because properties and stocks were over-insured by so-called insurance agents. He said that one of his firemen, acting on instructions, had secured fifteen policies of $500 each on the furniture in his house. Regarding losses in Canada generally, Mr. Tremblay said: "The fire losses in this country are enormously more per capita than anywhere else in the world, and I hope our governments will take vigorous measures. Fifty per cent. of the fire wastage can be stopped if proper laws were made and enforced. The loss in Canada from fire per capita is $3.58."

UNITED CANADIAN INSURANCE MANAGER

(The Monetary Times Photo.)
CHAS. E. BERG.

Readers of *The Monetary Times* will be interested to learn that Mr. Charles E. Berg, well known in insurance circles on account of his work in connection with the founding of the Hudson Bay Insurance Company and his successful management of that company until it was purchased by the Royal Insurance Company of Liverpool, England, has re-entered the field of insurance. His especial concern at the moment is the management of the United Canadian Insurance Company, with head office at 510 Hastings Street W., Vancouver. This company recently secured a Dominion charter. Mr. Berg has been connected with insurance since 1898. It was in 1905 he moved to Canada from North Dakota and organized the Hudson Bay Insurance Company, the head office of the company being subsequently moved to Vancouver.

The connections which Mr. Berg brings to his new task will stand him in good stead, while his managerial experience will prove decidedly advantageous to him in this new enterprise.

PUBLICATIONS RECEIVED

Regulation of Railways.—By S. O. Dunn, editor of the Railway Age. By reason of the author's close connection for many years with railroads he is able to speak with considerable authority on this question. Besides a discussion of regulation, a number of chapters are also devoted to a comparison of the advantages of government as compared with private ownership. The general conclusion is in favor of the latter. The book is especially serviceable to Canadians by reason of the fact that two chapters are devoted to Canada's experience in the government ownership of railways. The various events since the United States entered the war in 1917 are also explained. Appleton and Company, New York, $1.75.

PERSONAL NOTES

MR. W. J. TAYLOR, of the Woodstock "Sentinel-Review," and "Rod and Gun," has been elected president of the Canadian Press Association.

MR. W. H. SOMERVILLE, A.I.A., has been appointed secretary of the Mutual Life of Canada, succeeding Mr. Charles Ruby, who was recently appointed manager.

MR. J. WALTER WARDLAW, who began his railroad career with the Grand Trunk Railway at Toronto, has been appointed general manager of the Central Vermont Railroad, with office at St. Alban's, Vt.

MR E. R. WOOD has been appointed chairman of the committee in charge of the next Victory Loan campaign. Various matters relative to the coming loan are being discussed at a meeting of the Toronto bond dealers to-day.

MR. GEORGE H. THOMPSON, of Quebec, vice-president of the Union Bank of Canada, has been elected to the board of directors of the Bell Telephone Company of Canada. Mr. Thompson replaces the late Mr. C. F. Sise, on the board.

MR. GEORGE INNES MACKENZIE, formerly of the Regina Brokerage and Commission Company, is now in charge of the casualty department of Oldfield, Kirby and Gardner, Winnipeg, in place of Mr. J. Elmer Woods, who has gone to the war.

MR. A. L. CROSSIN, of Oldfield, Kirby and Gardner, Winnipeg, was a visitor to *The Monetary Times'* office this week. Mr. Crossin is on his way to Ottawa to attend a meeting of the Second Victory Loan Committee, called for Tuesday of next week.

MR WILLIAM J. HETHERINGTON, who was manager of the William Laking Lumber Company, and the Riverdale Lumber Company, died at his home 61 Prince Arthur Avenue, Toronto, last week. Born in Toronto, 51 years ago, Mr. Hetherington was raised and educated in this city. He was a member of the Independent Order of Foresters and of Zetland Masonic Lodge.

CROP ACREAGE FOR 1918

The North-West Grain Dealers' Association has completed an estimate of the acreage in crop as on June 8th, 1918, showing also a comparison with the figures for last year. The estimate (in acres) is as follows:—

	Dominion government census.		
	1917.	1918.	Increase.
Wheat	13,619,400	15,526,100	14.0%
Oats	8,559,500	9,133,000	6.7%
Barley	1,850,000	1,955,500	5.7%
Flax	909,800	1,000,000	10.0%

Progress of the grain movement is reported on June 8, 1918, as follows:—

	Bushels.
Wheat inspected to date	151,579,000
Wheat in transit, not inspected	1,559,000
Wheat in store at country points	3,686,000
Wheat used for seed, feed and country mills	35,000,000
Wheat in farmers' hands to market	2,000,000
	193,824,000
Less dual inspection (estimated)	3,000,000
Total wheat crop	190,824,000
Oats inspected to date	54,966,600
Oats in transit, not inspected	363,000
Oats in store at country points	1,844,000
Oats in farmers' hands to market	2,000,000
Barley inspected to date	9,142,900
Barley in transit, not inspected	50,700
Barley in store at country points	352,000
Flax inspected to date	4,927,600
Flax in transit, not inspected	20,000
Flax in store at country points	247,700

GERMAN SHIPPING AFTER THE WAR

Germany Will Find Herself in the Background After Years of Inactivity

The following article, written by Herr Oskar Linder, of Hamburg, a well-known German authority on shipping, appeared recently in the "Norddeutsche Allgemeine Zeitung," of Berlin, and was later translated in "Commerce Reports":—

With no branch of Germany's economic life has the world war played such havoc as with German oversea shipping. A good two-thirds of the collective German trade fleet has, up to the present, through seizure or capture, fallen into the possession of the enemy or been sunk, or else appears to be greatly imperilled.

To this must be added the frequently overlooked fact that German oversea shipping firms have, since the beginning of the war, despite the absence of any income worth mentioning, been obliged to spend, month in and month out, enormous sums for keeping their ships lying in neutral harbors in good condition, for harborage, and for the hire and support of the seamen on these ships—expenditures which have, of course, gradually become less with the entrance of the majority of the States originally neutral into the coalition against us, yet which still to-day require considerable quotas. There must, furthermore, be added the taxes at home, the cost of keeping in condition the ships lying here, the usual business expenses, the support of those employees who have joined the colors and of their dependants, and much besides.

The handsome profits which some of the large German shipping firms have gathered since 1916 through the transportation of iron ore and coal in the Baltic Sea can, in the face of these expenditures, hardly be considered as more than a drop upon a hot stone.

If the predicament of the German oversea shipping firms appears on the very face of matters to be an extremely difficult one, it appears still more perilous when it is compared with the foreign competition that it must meet on the world's seas after the end of the war, for the shipping companies of the neutral and enemy countries have earned altogether fantastic sums during the years of the war. They have thereby not only been in a position to declare dividends of unprecedented size, but have in addition to this also transferred vast sums to reserve and emergency funds, whereby their ability to compete against the weakened German shippers has increased to such an extent that one cannot but face the coming war of competition with concern.

Neutral Shipping Has Gained.

There has, furthermore, arisen in the neutral countries a lot of new and, at the same time, exceptionally well capitalized shipping enterprises that will likewise have a weighty word to say in the shipping rivalries after the war. Thus, for example, in Norway, which surpasses all other countries in this respect, there were established in 1915 no less than 488 new shipping firms with a total capital of 120,000,000 crowns [at normal exchange the crown is worth $0.268 United States currency]; in 1916, 459 more firms, with a collective capital of 353,400,000 crowns (according to other estimates actually 550,000,000 crowns).

How large the profits of the shipping companies of the neutral and hostile countries are, may be indicated through a few examples. Norwegian shipping firms, which have paid the highest dividends of all (up to 400 per cent.), can here be ignored, as it is our purpose to describe the alterations in the regular navigation service and the Norwegian shipping undertakes principally tramp service. Important, on the other hand, are the figures for the Swedish firms, which, before the war, were considerable feeders of the standard German lines, but which have now become so strong that they have entered upon the regular service themselves or have extended and solidified already existing lines to such an extent that German lines can hardly count on the Swedish traffic in the future. The amounts, for instance, for the year 1916 were:—

Shipping firm.	Stock. Crowns.	Net profits. Crowns.
Svea	8.400,000	10,000,000
Swedish-American Line	4,700,000	9,950,000
Swedish-Lloyd	5,800,000	8,530,000
Transatlantic	4,500,000	12,400.000
Swedish East Asiatic Line ..	4,000,000	6,200,000
Sweden-América-Mexico Line	2,800,000	2.830,000

In 1917 the expansion of Swedish lines made still greater progress—above all, that of the firm Transatlantic, in Goteborg, which, before the war, was an insignificant firm, capitalized at 2,400,000 crowns. This company had at the end of 1917—after several increases in capital which came partly through the distribution of free shares—a capital of 12,000,000 crowns; and, after consolidation with the Sweden-America-Mexico Line (which likewise can look back over a brilliant development during the war), a transportation capacity of 172,000 tons. Of late the Transatlantic is said to have undertaken an additional increase in capital of 1,200,000 crowns in order to take over the bonds of the Viking Company. This consolidation would give the Transatlantic concern a fleet of 44 vessels with a carrying capacity of 216,000 tons. In addition, 10 steamers, of 8,000 tons capacity each, are said to have been ordered. The company intends to extend still more its lines, which now go to all parts of the globe, especially those to North and South America; and, when it gains control over considerable ready money, it will constitute a competition against the German North American lines and against the Hamburg South American steamship companies, that must be taken very seriously.

Of the other Swedish shipping firms, we might mention here the Svea concern, which has increased its capital to 16,800,000 crowns, and owns a fleet of 67,000 tons capacity; also the Swedish Lloyd, whose capital before the war amounted only to about 1,900,000 crowns, but has now been increased to 9,700,000 crowns, with a corresponding increase in tonnage.

Of great importance for an estimate of the future of our shipping combines is the progress which the two largest Danish lines—the Forenede, which sails to North America; and the Estasiatisk Kompagni, which, as the name suggests, runs lines to east Asia—have made during the war. The Forenede, for instance, made in 1916, with a stock capital of 30,000,000 crowns, a net profit of no less than 40,000,000 crowns, of which a good 10,500,000 crowns was allotted to the reserve and emergency funds. The collective reserves of this company amounted to more than 26,000,000 crowns at the end of 1916; and its bank credits totalled 44,000,000 crowns. The East Asiatic Company, which, besides its shipping, trades in goods, gathered a net income of 47,800,000 crowns on a capital stock of 15,000,000 crowns.

The large Dutch shipping firms have likewise made enormous profits. The following table presents their results for 1916 [the Dutch florin, or guilder, is worth $0.402 United States currency at normal exchange]:—

Shipping firm.	Stock capital. Florins.	Net profits. Florins.
Holland-America Line ...	12,000,000	26,500,000
Stoomvaart Mij. Nederland	19,000,000	18,600,000
Kon. Nederl. Stoomboot Mij.	15,050,000	19,000,000
Rotterdamsche Lloyd	15,000,000	15,100,000
Kon. Hollandsche Lloyd ..	10,000,000	10,900,000

The example of the Holland-America Line shows best what enormous progress took place in the inner consolidation of the Dutch firms. The reserve of this company, which in 1913 amounted to 6,600,000 florins, grew to 24,800,000 by the end of 1916—in other words surpassed the previous stock capital (which in the meantime had been increased by 15,000,000 florins) by more than double. In addition, the company has available funds amounting in all to 21,700,000 florins. The reserves in the Nederland company, which have increased in the same period from 6,700,000 to 23,000,000 florins, exceeded the capital by 4,000,000 florins. The available funds of the Rotterdamsche Lloyd amounted at the end of 1916 to about 25,000,000 florins, with a share capital of 15,000,000 florins and a ready reserve of 16,000,000 florins.

Japan's Progress is Phenomenal.

But the business successes of the neutral European shipping firms are far surpassed by the earnings of the Japanese oversea lines. Thus the largest Japanese shipping firm, Nippon Yusen Kaisha, that sails from East Asia to all the important shipping markets, had a net profit in the summer half-year 1916 of 19,780,000 yen [the Japanese yen is equivalent to $0.498 United States currency]; in the winter half-year 1916-1917 actually 22,150,000; in a singe fiscal year it earned. therefore, about 42,000,000 yen. The company's capital stock amounted at the end of the fiscal year of 1916-1917, after a previous increase through the distribution of free shares, to 27,500,000 yen, the net profits of this single company being thus about 15,000,000 yen more than the amount of the capital.

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific

New York Agency: 63 and 65 Wall Street

Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

The company's fleet has grown considerably. The total available reserves amount to nearly 63,000,000 yen. Of ready money the company had at its disposal at the end of March, 1917, 55,300,000 yen. According to reports on hand, the company is supposed to have raised its capital in the meantime to 100,000,000 yen. That German firms running lines to Asia—that is, the Hamburg-American Line, the Norddeutsche Lloyd, the Hansa and the German-Australian Steamship Company—will be in a difficult position should there ever arise competition with these Japanese shipping firms, and that no amicable settlement need be expected, requires no emphasis.

The shipping firms of the other countries of the Entente have likewise, especially those of England, obtained exceedingly large war profits. And even though they may in a way have suffered considerable losses in ships through the submarine war, the large English, French and Italian owners of lines (and alone their rivalry is to be feared) have in consequence of these very earnings been able to maintain their fleets for the most part at the normal number, and in some cases to enlarge them, by buying out smaller companies. Besides, they are in possession of considerable ready money, which gives them an immense advantage over German companies.

The important Cunard Line had, for instance, in 1916, with a capital of £3,800,000 sterling (£1,000,000 of which went to a new issue of shares) a net profit of £2,350,000, as against £1,350,000 in 1915 and only £891,128 in the good shipping year of 1913. [The British pound sterling is equivalent to $4.8665 United States gold]. The available funds of the company amount to £1,770,000, representing, therefore, nearly half of the augmented capital. The White Star Line has available funds to the amount of £2,100,000; its capital stock aggregates £3,750,000. The Leyland Line has £6,000,000 in ready money, bank credits and securities, whereas its capital amounts to only £1,200,000 original stock and £1,700,000 preferred stock and bonds.

In the case of the French and Italian shipping firms there are, in addition to the war profits, quite recently granted subsidies which are to serve the purpose of enhancing the competing power of the national fleet in the period following upon the war. In France credits to a total amount of 360,000,000 francs [the franc is worth $0.193 United States gold] have been granted for the purchase and construction of seaworthy ships, to which it must be added that French shipping already before the war enjoyed the highest subsidies in the world. In Italy, besides an appropriation of 165,000,000 lire [lira equals $0.193 at normal exchange], exemptions from taxes for a period of several years for purchased and for new ships alike and premiums on construction have been granted. Thus, a new firm has been established under government patronage with a capital of 500,000,000 lire, a sum alongside of which the capital of the largest of German shipping firms, the Hamburg-American Line, with its 180,000,000 marks [at normal exchange the German mark is worth $0.238 United States currency], makes a modest impression.

State Assistance Not all Powerful.

A survey of the above data will lead inevitably to the admission that the outlook for the German oversea shipping firms after the war is by no means rosy. The German government's gratifying measures of assistance in favor of the shipping trade do not alter the situation in the least. For even if the shipping firms are granted considerable sums for the construction of ships to replace the ones lost, in accordance with the provision for the reconstruction of the German merchant marine, yet, on the other hand, the sums to be paid out according to the law are so adjusted that even in the most favorable cases the shipping firms have at least to bear a portion of the cost of reconstruction, equivalent to the value of the ship in peace times. The indebtedness of the shipping firms will therefore, in spite of the law, be subjected to a still greater increase before they obtain possession of sufficient tonnage to enable them to resume the struggle for their former fields of activities. This fact alone reveals plainly enough that the law amounts much less to a patronage of the shipping concerns than a measure for the extension of German foreign trade, of German economic life in general, which without a speedy reconstruction of the German merchant marine would have to pay millions of marks yearly to foreign countries, if any even approximately sufficient tonnage be put at its disposal at all, considering the scarcity of ocean-going vessels.

The material presented above proves in addition how little the immediate bourse speculation in shipping stocks ensuing upon the publication of the law is actually justified. German shipping firms will have to apply every possible energy and influence in order to reconquer their former place in the sun. As things are situated there need be expected no handsome dividends for years to come, even should the high freight rates now prevailing be paid for any considerable time after the war, which possibility is justly doubted in shipping circles. The profit of the first few years will in all likelihood be appropriated, for the most part, for the immediate payment of the obligations assumed during the war and for those to be assumed for the reconstruction of ships, as well as for the completion of the reserve funds, which naturally will have to be put to considerable use.

TORONTO STOCK EXCHANGE OFFICERS

At the annual meeting of the Toronto Stock Exchange, held on Tuesday, the 18th inst., the following officers and committee were re-elected: President, H. R. Tudhope; vice-president, Geo. W. Blaikie; secretary, O. Heron; treasurer, E. G. Wills; committee, D. S. Cassels, Edward Cronyn and Stewart B. Playfair.

(British and Colonial Press Photo.)

HILTON R. TUDHOPE.

Mr. H. R. Tudhope, the president, is a member of the firm of A. E. Ames and Company. He was born in Orillia, Ont., in 1877 and was educated at Gravenhurst public and high schools. He began his business career as a clerk with Messrs. Ames and Company in 1896, and became a member of the firm in 1898. The vice-president, Mr. Blaikie, is head of the firm of Geo. W. Blaikie and Company.

SIR THOMAS WHITE IN WASHINGTON

Sir Thomas White has been in Washington during the past few days, discussing the commercial and financial relations of Canada and the United States. The principal one is that of the coming war loan. An unprecedented level is to be set as the goal of the loan in Canada, and the Fourth Liberty Loan in the United States, to the amount of $6,000,000,000, will, it is expected, be open about the same time. It is understood that the minister will be back in Ottawa next week for a conference with the heads of the various committees connected with the last war loan, and that the terms of the coming loan will be thoroughly discussed.

Another question which is engaging his attention in Washington is that of trade and exchange relations between Canada and the United States. New York exchange is now quoted here at over 2 per cent., and the balance of trade is heavily against us. Some remedy is to be sought, either in the form of trade restrictions or of a Canadian credit in New York.

THE STERLING BANK

LIFE PREMIUMS AND LOSSES

Some United States Companies Subject to Excess Profits Tax—War Losses Anticipated

General counsel Job E. Hedges, of the Association of Life Insurance Presidents of the United States, has urged the House Ways and Means Committee, which recently sat at Washington, to clarify the excess profits tax section of the war revenue law, so that it could not be held to apply to funds held in trust for policyholders.

The war revenue act of the United States permits corporations to realize a net return of 7 per cent. upon the capital invested in their business without liability to the excess profits tax. The average returns realized upon investments of life insurance companies does not exceed 5 per cent. By technical ruling of the treasury department, the companies legal reserves are denied recognition as invested capital. As a result of this ruling, many of the companies may be made to appear liable to the excess profits tax, notwithstanding the fact that the ratio of their gross earnings to their actual invested capital is at least 2 per cent. lower than the rate permitted to ordinary corporations without payment of an excess profits tax.

With life insurance companies relieved of the excess profits tax upon the ground that they did not earn excess profits, they would still be liable to the same income tax as all other classes of corporations, as well as to the special tax of eight cents per $100 of new insurance, which other classes of corporations do not pay.

Army and Navy War Insurance.

Mr. Hedges showed the economic and social service rendered by life insurance in readjusting conditions due to untimely death. He also dwelt upon the government's endorsement of the principal of life insurance, saying: "You have in fact organized the entire army and navy into a great mutual life insurance company."

The institution of life insurance, Mr. Hedges declared, has been built up, without governmental subsidy, upon mathematical principles into a vast system of voluntary co-operation between policyholders for mutual protection on a basis of cost, plus the expense of administration. The companies are merely administrative agencies. Approximately 8 per cent. of all legal reserve business, including about 60 per cent. of all business carried by stock companies, is on the mutual plan. Of the stock companies only nine earned and paid to stockholders in 1917 dividends in excess of the minimum rate authorized by the excess profits law. The total of these dividends was $436,373, and the average ratio of dividends to capital invested was 8.45 per cent. Only three of these companies exceeded the 9 per cent. minimum rate recognized by the act as exempt from the excess profits tax.

Similarity of Mutual and Stock Companies.

In his illustration of the reasons for and the methods of building up the reserve, Mr. Hedges pointed out to the committee that the net single premium is the capital sum or reserve required to furnish the desired insurance under a paid-up policy, and that since it is generally inconvenient for the insured to pay the net single premium at the outset, it is commuted into convenient annual payments, from which the reserve must be built up by degrees. The aggregate of these reserves contributed by the policyholders constitutes the principal item in the capital of every life insurance company. In a mutual company it is the only capital until a surplus can be accumulated from expense savings or favorable mortality experience. Mr. Hedges continued:—

"The capital of a stock company includes, in addition to the reserves and surplus, the capital stock which merely affords a further guarantee for the payment of the outstanding insurance. Every gentleman on this committee who holds a policy of old line life insurance is a part proprietor of the company. If the company be a mutual one, the policyholders are the only proprietors. If it be a stock company, their interests preponderate."

The character of life insurance investments permitted by law is limited and specifically defined by statute. Safety, not profit, is the aim. Mr. Hedges showed from the records that during the 25 years since 1893 the average return has been less than 5 per cent.

Turning from income to outgo, Mr. Hedges made it clear that outstanding life insurance contracts entered into in times of peace, at rates based on peace mortality statistics, contain no provision for extra war premium—or if they did, they have been waived—and that of necessity the extra losses under these contracts, due to the war, will constitute an additional burden upon the companies to be met out of surplus.

The insurance in force on male lives of the draft age, he said, exceeds three billions of dollars. The best figures obtainable as to the Canadian war losses indicate a ratio in civilian losses in 1916 of about 35 per cent. and in Great Britain of about 20 per cent. Discounting the latter by half, the prediction is warranted that American life insurance companies will sustain an excess mortality of not less than $25,000,000 annually, to defray which no extra premium has been or can be charged.

Mr. Hedges informed the committee that there has been a horizontal decline in the value of securities held by American life insurance companies and that their earning power has also been materially decreased by reason of the low return upon the large subscriptions to Liberty Loans which have been and will be made in pursuance of what the executives recognize as a patriotic duty of the life insurance companies.

LAND HOLDINGS IN SOUTHERN ALBERTA

A pamphlet has been issued by the Lethbridge Board of Trade, entitled "How Much Land a Man Needs." It is pointed out that those who do not burden themselves with too much land will probably be in a more favorable position than those who have more than they can cultivate properly.

"Our best farmers long ago came to the conclusion that the closest approach to thrift and safety in this district lay in a steadily pursued plan of summer fallowing no less than one-third of their acreage each year." The point is illustrated by a Russian parable supplied by President G. R. Marnoch, of the board of trade.

Regarding the city of Lethbridge, the pamphlet states that out of $1,200,000 of sales of farm implements at one branch in Lethbridge in 1917, 92.7 per cent. of it, or approximately $1,100,000, was done in cash. In 1916 82 per cent. of the business, or somewhat less than $1,000,000, was for cash. The prospects for 1918 are considered to be even better than they were in 1917.

YORKSHIRE INSURANCE COMPANY, LIMITED

Among the oldest of British insurance companies is the Yorkshire Insurance Company, which has been established since 1824. According to the report for the year ended December 31st, 1917, another very successful year of business has been concluded. The net premiums from the five departments, after deductions of reinsurance, amounted to $3,045,620, as against $2,414,620 in the previous year. The losses were $1,478,500, this being 48.5 per cent. of the premiums, or an advance of 1.4 per cent. over last year. The sum of $235,335 has been carried to profit and loss, and the reserve for unexpired liability is $1,218,250.

In the employers' liability account the premium income for the year amounted to $571,640, and the claims were $248,165. The reserve for unexpired liability is now $228,660, and provision for outstanding claims $259,245; $100,000 was carried to profit and loss, and the balance carried forward was increased to $270,600.

The premium income in general insurance amounted to $1,556,095, and the claims paid and outstanding were $808,920, or 52 per cent., which is slightly less than last year. The reserve for unexpired liability is $622,450, and, after carrying $125,000 to the profit and loss account, the balance carried forward is increased to $385,685.

The balance at the credit of profit and loss from last year was $396,085, and, after the additions from the different departments, the total was $2,276,150; $1,000,000 was set aside as provision for excess duty, and $550,000 was carried to the general reserve fund. Dividends amounted to $313,220, and $392,930 was carried forward. The general reserve fund now amounts to $2,819,940.

Work is to be commenced shortly in Prince Rupert on eight steel steamships of 8,500 tons each, according to W. P. Hinton, vice-president and general manager of the Grand Trunk Pacific Railway. The vessels will be built by a United States company, using the drydock at Prince Rupert.

Debt Has Been Kept Down—Heavy Deficit on Street Railway But Other Utilities Showed Surplus

According to the annual statement of the city of Edmonton for the year ended 31st December, 1917, the net debt of the city is now $21,556,948, or about $900,000 less than two years ago. The following is a statement of assets and liabilities as at 31st December, 1917:—

Assets.

Capital—	
Lands, buildings, properties, utilities, etc.	$20,829,931
Expenditures against hypothecated debentures	2,479,044
Unexpended debenture funds, advanced to current account	1,289,798
	$24,598,774
Current—	
Interest	$ 5,795
Taxes receivable	6,157,075
Accounts receivable and suspense	301,906
Stores and loose tools	410,449
Capital expenditures unprovided for by sale of debentures	237,570
	$ 7,112,796
Total assets	$31,711,571

Liabilities.

Capital—	
Debentures issued (less sinking fund investment)	$21,556,948
Current account (on debentures hypothecated)	2,479,044
Capital surplus	562,781
	$24,598.774
Current—	
Bank overdraft and special loans	$ 2,945,303
Accounts and bills payable	744,638
Advanced from capital account	1,289,798
Accrued debenture interest and redemption	1,542,398
Sundries	186,892
Reserves for overhead depreciation	395,673
Revenue surplus	8,091
	$ 7,112,796
Total liabilities	$31,711,571

The expenditure and revenue for the year is summarized as follows:—

Expenditure.

Departments—	
Assessor and tax collector	$ 19,693
Auditors	1,500
Building inspector	4,042
Children's Shelter	10,924
City clerk	4,381
City hall maintenance	9,820
Commissioners	8,928
Comptroller	8,847
Engineer	13,654
Farm gaol	1,545
Fire (including water for hydrants)	145,584
Health and cemeteries	16,563
Legal and claims	7,053
License and collections	7,906
Markets	5,357
Parks	10,486
Police (including commission)	84,643
Pound	3,181
Sewer maintenance	10,326
Street lighting	45,122
Street cleaning and scavenging	72,442
Streets (maintenance and repairs)	31,664
Streets (fountains and water troughs)	2,132
Streets (maintenance of boulevards)	3,289
Streets (drainage)	5,786
Streets (destroying noxious weeds)	343
Treasurer	6,017
Miscellaneous	59,557
Grants and donations	53,728
Interest and exchange	445,004
Debenture interest and redemption	1,290,696
Surplus for year 1917	8,091

Revenue.

Departments	$ 43,641
Miscellaneous	15,175
Assessment	2,127,488
Interest and exchange	179,421
Net surplus from 1916	41,591
Total revenue	$2,407,318

The total assessment of Edmonton is now $112,430,190, and the net assessment $160,917,090. The tax rate for the year was 26.50 mills, and including frontage taxes and arrears of water rates, yielded a total of over $3,000,000.

The net assessment in 1914 was $191,283,970, so it has been practically cut in two. Between 1911 and 1912, it made a most remarkable jump from $46,494,740 to $123,475,070. The tax rate is now at its highest point in the history of the city, the rate of 21 mills last year having been exceeded only in 1901 by one-half mill.

BRITISH COLUMBIA INSURANCE COMPANIES

Fire Losses Low — Miscellaneous Business Generally Satisfactory

The ratio of fire losses to premiums on the business written in British Columbia during 1917 was 24.5 per cent., which is an extremely low rate. Only one company incurred a loss greater than its premiums, and in this case the difference was not large. The returns of some of the more important companies were as follows:—

	Premiums.	Losses incurred.	Losses paid.
Phœnix Assurance	$254,359	$ 79,693	$102,899
Liverpool and London and Globe Insurance	164,577	27,273	33,122
Royal Insurance	110,609	29,878	38,258
Commercial Union Assurance	104,969	41,903	40,612
Hartford Fire Insurance	96,904	14,316	11,721
Guardian Assurance	95,248	17,875	28,400
London and Lancashire Fire Insurance	90,215	27,730	23,134
Northern Assurance	78,942	16,801	16,773
Queen Insurance	74,940	18,943	23,943

Miscellaneous Insurance.

The returns of miscellaneous insurance are as follows:—

	Premiums.	Losses.	Ratio of losses to premiums.
Accident	$197,510	$110,947	56%
Sickness	50,621	21,157	42%
Liability	68,712	103,920	151%
Automobile	134.417	50,597	38%
Burglary	2,746	130	5%
Guarantee	35,216	9,545	27%
Plate glass	31,844	12,369	40%
Marine	283,449	152,880	54%
Livestock, steam-boiler, sprinkler leakage, inland transportation & explosion. (Indicated by initial letters)	5,511	227	4%
	$809,031	$461,776	57%

The liability insurance, which will be observed, is the only case in which the losses were greater than the premiums. There were 61 companies writing miscellaneous insurance during the year.

Mr. Darwin P. Kingsley, president of the New York Life Assurance Company, has completed his eleventh year in that office. During this period the company has progressed steadily, and is keeping up its record for the present year. The total business for the first twelve days of this month is $15,180,000 as against $12,671,000 for the same period in June last year.

Women Should Make Wills

It is quite as important for women to make their Wills as for men. In either case, it is of prime importance to appoint an Executor who will have the time and ability to do full justice to the Estate. Appointing individuals as Executors is frequently unsatisfactory on account of an individual not having the experience, the leisure or the willingness to properly carry out all the details essential to successful administration.

Let Us Send You Our Booklet on Wills.

RENT AND USE AND OCCUPANCY INSURANCE

Possibility of Loss and Income is Insurable as Well as Property

Mr. C. A. Macmorran, insurance manager for British Columbia of the London and British North America Company, Limited, discusses rent and use and occupancy insurance in the "Vancouver Sun," as follows:—

Few property owners fail to protect their buildings by fire insurance, but very many people, whose income is entirely dependent on rentals, neglect to provide for suspension of their source of revenue due to their building being rendered partially or completely untenantable by fire. In a similar manner, manufacturers frequently overlook that they can protect by insurance their loss due to cessation of business activities during the period required to repair or rebuild the premises damaged by fire. Possibly, therefore, a brief outline of what insurance companies contract to cover under a rent policy and under a use and occupancy policy, respectively, may be of interest. The following is the rent clause commonly used:—

"This insurance is to cover the rentals of the stipulated buildings, whether occupied or unoccupied. The liability of the insurers shall not, however, in any event, exceed the net rentals as defined in section 3 hereof, being received at the time of the happening of the fire or that may be actually under lease, together with the estimated rentals of the unoccupied portion or portions of the said building.

Terms and Conditions.

"This insurance is hereby granted by the insurers and accepted by the assured, on the following terms and conditions:—

"(1) The insurance shall cover the net rental of said buildings from the time of the occurrence of the fire and for the period necessary for reinstatement, not exceeding in all one year's net rental or the sum insured.

"(2) In case of total or partial destruction of or loss by fire to the building, it shall be deemed to be the duty of the assured, as a basis of settlement of the loss of rent, to rebuild or repair, as the case may be, the premises with all despatch. Loss to be computed from the date of the occurrence of said fire, and to be determined by the time it would require to put the premises in tenantable condition.

"(3) The liability of the insurers shall be further limited to the actual or estimated net rental of the building—i.e., after deduction has been made for the partial or total discontinuance of heating, lighting, cleaning, elevator service, taxation and for any other saving, however caused.

"(4) The assured undertakes to maintain insurance concurrent with this policy to the extent of the full yearly rental of the premises, as defined in section 3 hereof, and in the event of the assured failing so to do he shall be a co-insurer for the deficiency.

"(5) In the event of any disagreement, either as to the period necessary for reinstatement, the estimated rentals of any unoccupied portion or portions or of the actual net loss sustained by the assured, the same shall be left to the judgment and determination of appraisers or arbitrators, as provided in the printed conditions of this policy."

No Hardship Imposed.

It will be observed that the assured is required to carry insurance to the extent of the full "net" yearly rental of the premises, or himself be a co-insurer for the difference, and that the insurance company excludes liability for janitor's services, cost of fuel, etc.. as such expenses would be reduced, if not entirely eliminated, during the time necessary to render the building tenantable. This latter provision does not impose any hardship on the assured, however, for, of course, the co-insurance requirements would only apply if the assured had not maintained insurance to the extent of the full "net" rentals—i.e., after deducting said janitor's services, cost of fuel, etc.

The rate for rent insurance on all classes of building, wherever situated and however occupied, is 50 per cent. of the gross rate of the building, the expectation being that not more than 50 per cent. of the face value of a policy can be realized upon, six months being considered sufficient time in which to restore the damaged building.

With respect to use and occupancy insurance, no form can be laid down for general use, nor can any rates be fixed, as the different cases necessitate individual treatment. For example, a plant may operate full time during the summer months and only half time, or not at all, during the winter, and this would necessitate making provision in the policy for its varying earnings by specifying different loss limits per day by periods proportionate with the earnings. As a rule, the loss limit per day is based upon 300 working days in each year, and the amount for which the insurance company is liable is 1-300ths of the policy for each working day the plant is entirely prevented from operating, and for a pro rata share of the proportionate amount only thereof, in case of partial prevention of operations.

Use and Occupancy.

Considerable difference of opinion exists, even amongst insurance companies, as to what actually is embraced under "use and occupancy," some contending that the term means profit, and others asserting that it means net income, but in any event, the intention is to reimburse the assured for the loss of money he does not receive while his plant is inoperative, and the actual cover is a matter to be set forth in individual contracts between the insurance company and its assured. If the policy covers net income, then the basis of settlement of any loss must be what the assured would have received (his receipts from sales, less the cost of manufacture) if his plant had not been rendered inoperative. If the contract covers profit, that profit would not commence until fixed charges had been met, including taxes, interest on mortgages, interest on capital invested in any portion of the plant which the assured is unable to operate, salaries and wages of employees under contract, or necessary to be retained in order to maintain organization and general maintenance charges of every description.

BANK BRANCHES OPENED AND CLOSED

The following is a list of bank branches opened and closed during May, 1918:—

Branches Opened—Four.

Barcelona, Spain	Royal Bank of Canada.
Bristol's Corners, Que.	Merchants Bank of Canada.
Campbell's Bay, Que.	Merchants Bank of Canada.
Winnipeg, Man., Portage and Garry Branch	Bank of Hamilton.

Branches Closed—Twelve.

*Cap de la Madeleine, Que.	Banque Provinciale du Canada.
*Frankville, Ont.	Merchants Bank of Canada.
Jaspar, Ont.	Bank of Nova Scotia.
Markdale, Ont.	Wm. Lucas and Company.
Marpole, B.C.	Northern Crown Bank.
Montreal, Que., Cotes des Neiges	Royal Bank of Canada.
*Montreal, Que., Point St. Charles	Bank of Toronto.
*Montreal, Que., St. Francois de Salano	Banque d'Hochelaga.
St. Germaine (Lac Etchemin), Que.	Banque Nationale.
*Stanstead, Que.	Canadian Bank of Commerce.
Toronto, Ont., King and George Streets	Bank of Nova Scotia.
Vancouver, B.C., Mt. Pleasant	Northern Crown Bank.

*Sub-branches.

Kissel, Kinnicutt and Company, of New York, are offering 7 per cent. three-year mortgage gold notes of the Puget Sound Traction Light and Power Company. This company was incorporated in 1912, and is a holding company, controlling well-established utility companies serving Seattle, Tacoma and other Puget Sound points with electric light, power, and city and interurban transportation.

The Hamilton Provident and Loan Society

DIVIDEND No. 94

Notice is hereby given that a Dividend at the rate of Eight per cent. per annum has been declared for the half year ending June 30th, 1918, upon the paid-up Capital Stock of the Society, and that the same will be payable at the Society's Head Office, Hamilton, Ontario, on and after Tuesday, the 2nd day of July, 1918.

The Transfer Books will be closed from the 15th to the 30th of June, both days inclusive.

By order of the Board.

D. M. CAMERON, Treasurer.

Hamilton, May 31st, 1918.

THE HURON AND ERIE MORTGAGE CORPORATION

QUARTERLY DIVIDEND No. 123

Notice is hereby given that a Dividend of Three per cent. for the quarter ending June 29th, 1918, being at the rate of TWELVE PER CENT. PER ANNUM upon the Paid Up Capital Stock of this Corporation, has been declared, and will be payable at the Corporation's office in this City on and after July 2nd, 1918, to shareholders of record at the close of business on June 15th, 1918.

By Order of the Board.

M. AYLSWORTH,
Secretary

London, Canada, May 27th, 1918.

FINANCES OF TORONTO

Considerable Increases in Expenses and in Taxation—Some Expenses are Reduced—Debt Burden is Heavy

Estimates of the city of Toronto for the year 1918 include the large sum of $13,604,813 for uncontrollable expenditure, almost half of which consists of debt charges. The estimates of expenditure are as follows:—

Controllable:	
Court of revision	$ 4,800
City relief office	8,928
Special grants	9,480
Auditor's department	16,200
Cattle market	18,224
City council	36,582
Law department	43,512
Architect's department	62,710
Social service commission	91,598
City clerk's department	94,469
Miscellaneous	109,298
City abattoir	115,992
Assessment department	120,270
War bonuses	238,515
Park's department	382,003
Treasurer's department	443,173
Property department	771,806
Street cleaning department	887,000
Fire department	1,340,627
Works department	1,882,401
Total	$ 6,677,588
Uncontrollable:	
Grants, statutory and fixed	$ 14,800
Commission on claims	15,000
Industrial schools	19,954
War bonuses	64,678
Public library	149,524
Separate schools	217,936
Public health	424,135
Special works	495,980
Provincial war tax	605,728
Public hospitals	739,522
Administration of justice	1,151,499
Board of education	3,226,103
Debt charges	6,479,954
Total	$13,604,813
War expenditure	3,763,201
Grand total	$24,045,602

Large Sum from Taxation.

The estimates of revenue are as follows:—

Ordinary:	
Canadian National Exhibition	$ 35,000
Market and other fees	40,123
Sundry	74,037
Licenses	101,700
Civic abattoir	108,000
Administration of justice	114,400
Rentals from city property	274,547
Civic car lines	300,000
Street railway revenue	1,000,451
Water rates	2,362,268
	$ 4,410,526
Special:	
Surplus and transfers from 1917	1,527,404
Taxation	18,107,672
Grand total	$24,045,602

One-Half Expenditure Uncontrollable.

These items are expressed as fractions of the whole, as follows:—

Revenue.	Per cent. of whole.	Expenditure.	Per cent. of whole.
Ordinary	18.34	Controllable	27.77
Special	6.35	Uncontrollable	56.58
Taxation	75.31	War	15.65
	100.00		100.00

The following are the latest statistics of the city:—

Assessment	$605,727,725
Exemptions not included in above	87,375,684
Population	473,829
Area of city (acres)	25,339
Tax rate: General (mills)	23.30
" School (mills)	7.20
" Total (mills)	30.50
Gross funded debt	100,323,433
Sinking fund	24,427,757
Net funded debt	75,895,676

Surplus Realized in 1917.

The actual revenue for 1917 exceeded the estimates by $238,698, and $69,086 of appropriations were not expended. Both these items were carried forward as receipts for 1918. Every source of revenue, excepting that consisting of rentals, licenses, fees, etc., realized a greater revenue than was anticipated, and out of 27 departments or services, 18 spent less than they had at their disposal.

The city's permanent assets are valued at $100,042,539, while the net debt is $75,895,676. While, therefore, the debt is high, being about $160 per head, the city has more than the usual proportion of assets. There are, however, about $7,000,000 of unsold debentures, issued to finance public works, which had been commenced before the end of 1916, and during 1918 there are $2,740,684 of debentures maturing.

CITY OF BRANTFORD FINANCES

The total receipts of the city of Brantford during the year ended December 31st were $948,390, including $40,000 of treasury certificates and $70,000 from the Bank of Montreal. The treasury certificates were redeemed during the year.

Some of the receipts were as follows:—

Taxes	$561,066
Water commission	50,000
Municipal Railway Revenue Act	22,314
Hydro-electric	17,221
Sinking fund earnings	42,201

Over $70,000 was used on new works, principally waterworks. The main heads of expenditure are as follows:—

Expenditure.

Board of education	$108,070
Hospital	23,000
Police	23,174
Fire	28,375
Streets and walks	22,927
Material	30,768
Street lighting	24,966
Garbage	17,434
Water	57,000
Provincial war tax	18,164
Dominion war loan	43,977
Patriotic fund	24,500
Interest on general debt	112,862
Interest on local debt	41,232

The following is a summary of assets and liabilities:—

Assets.

Current	$ 53,354
Debentures carried over	116,787
Works under construction	16,991
Advances	110,150
War relief advance	5,000
Municipal utilities	1,149,910
Permanent	1,036,831
Unrealizable	99,000
Local improvement	774,981
Investments	1,024,546
	$4,387,554

Liabilities.

Current	$ 18,027
Special	199,673
Trust funds	9,128
Workmen's compensation	2,000
Waterous Engine Works, Limited	2,238
General debt	2,552,340
Local debt	901,839
	$3,685,249

WORKMEN'S COMPENSATION IN ONTARIO

Results of Year 1917—General Increase Due Mainly to Higher Wage Scale—Operation is Expensive

The annual report of the Ontario Workmen's Compensation Board for the year 1917 has just been made public. The board commenced operations on January 1st, 1915, so that this completes the third year of operations.

The industries subject to the act are divided into two schedules; in those under the first schedule, the losses are borne by the industry as a whole; in those under the second schedule, they are borne by the employer alone. The second schedule comprises such bodies as railroads and municipalities, where to apportion the loss would be an obvious injustice.

In submitting the report, the following general review of the work of the year is given:—

The total amount of assessments in schedule 1 for the year, including estimated adjustments, was $2,460,882.89; the number of employers was approximately 14,000; the total estimated payroll was $256,580,000; the estimated number of full-year workers covered was 287,750.

The total amount of compensation in schedule 1 for the year, actually awarded and estimated still to be awarded, was $2,434,209.66. The amount paid and estimated still to be paid for medical aid for the half-year during which the medical aid provisions were in force was $167,028.14.

Industries under schedule 2 are not under the insurance system but the employers are individually liable for payment of the compensation fixed by the board for accidents as they occur. The amount of compensation awarded in the industries under schedule 2 during the year was $623,556.37, $460,420.84 of which was for railways, and $75,815.19 for municipal corporations.

A separate chapter gives the work handled during the year, without regard to when the accidents happened. Regarding this point, the report states: That this point of view is to be distinguished from that of chapter one in which the compensation is assigned to the year in which the accidents happened, and the assessments to the year for which they are levied. This latter mode of treatment is necessary in schedule one industries in order to fix the rates of assessment. It involves in any early report the use of estimates for adjustment of assessments and estimates for compensation still to be dealt with after the close of the year, thus making the statement only a provisional one. Chapter one deals with the year 1917 in this way. The final figures for 1917 will not be available for some time, but will be given in the next report, as the final figures for 1916 are given in chapter five of the present report. The actual figures for the work handled by the board during the year are, upon the other hand, available immediately upon the close of the year.

The total amount of compensation awarded during the year 1917 was $2,913,085.81, $2,289,529.44 being in schedule one and $623,556.37 in schedule two, the average per day being $9,071. The total during 1916 was $2,011,468.94, $1,559,759.01 being in schedule one and $451,709.93 in schedule two, the average per day being $7,800.

Wages Have Generally Increased.

The increase in compensation, and also the increase in amount of assessments is due to the increased rate of wages perhaps more than to the increase in industrial activity, and accidents are no doubt now more fully reported than in the early history of the operation of the act.

During the year 1917, 28,702 accidents were compensated, 25,277 in schedule one, 3,406 in schedule two, and 19 Crown cases. The total during 1916 was 18,208, of which 15,370 were in schedule one, 2,825 in schedule two and 13 were Crown cases.

During 1917 there were 3,008 cases in which medical aid only was paid covering the last half of the year.,

The total number of accidents of all kinds reported during the year 1917 was 36,514, 30,701 being in schedule one, 5,813 in schedule two and 18 Crown cases, the average per day being 126, the total number of fatal cases being 454. The total number of accidents reported during 1916 was 26,092, 21,269 being in schedule one, 4,860 in schedule two and 17 Crown cases, the average per day being 87.

The amount paid to employers' safety and accident prevention association and their inspectors during the year was $38,210.24. The administration expenses of the board amounted to $133,629.50, of which the province contributed $100,000 in addition to commissioners' salaries and office accommodation. The cost of administration borne by schedule one employers during the year was .86 of 1 per cent. of the assessments received during the year, or 1.27 of the compensation awarded.

Medical Aid.

The medical aid amendment to the act went into force July 1st, 1917. Under this, workmen, whether disabled more or less than seven days, are entitled during a period not exceeding one month from the commencement of disability, to medical and surgical aid and hospital and skilled nursing services necessary as a result of the accident. This in schedule one industries is to be provided by the board or as the board may direct or approve, and is to be paid for out of the accident fund. In schedule two industries it is to be provided by the employer individually.

A schedule of medical and surgical fees has been adopted by the board to be used as a guide in fixing allowances for medical aid under the provisions of the act. Fixed rates have also been arranged as far as possible for hospital accommodation throughout the province. The provincial secretary has ruled that all hospitals entitled to government grant are to be entitled to this grant upon all patients whose maintenance is paid by the Workmen's Compensation Board, notwithstanding that such patients may not be public war patients.

Pursuant to authority contained in the medical aid amendment, a regulation was passed by the board during the year requiring all employers having more than 15 workmen usually employed to provide and have in charge of some suitable person a first aid kit, and requiring every employer having 300 or more workmen usually employed, to provide at his factory or plant an emergency first-aid-room, with necessary equipment and supplies, and to have the same in charge of a clerk, nurse, or other person who has taken a recognized course of study in first-aid to the injured.

Working of the Act.

The year 1917 has been an exceedingly satisfactory one in the operation of the act. Workmen, in addition to receiving compensation, are now enjoying the benefit of the new medical aid provisions; and, notwithstanding the additional expense involved, it has been found possible, with the large contribution now made by the province toward expenses, to reduce the employers' rates of assessment. This has been done retroactively for 1917 in most of the important classes of industry. The rates are now very much lower than those originally fixed when the act first went into operation. The average rate per $100 of pay roll under the rating schedule originally adopted for 1915 was (an estimated) $1.64; the average rate for 1915 under the schedule as finally adjusted was $1.09; and the average preferred rate for 1917 (an estimated) is 98 cents. An explanation of the method of fixing rates is contained in the rate book for 1918.

As has been frequently pointed out, the rates in Ontario are exceedingly low in comparison with those in other places, though the benefits to injured workmen are higher than in many places having higher rates of assessment. A feature of the Ontario act which must be highly satisfactory to both workmen and employers is the fact that practically all the money contributed by employers goes to the workmen or their dependants as compensation, or is paid for medical aid.

The state insurance system of workmen's compensation law to which the Ontario act belongs has been extending rapidly in recent years. Acts very similar to the Ontario act have gone into force in British Columbia and Nova Scotia, and one has recently been passed in Alberta. Properly carried out, this system should be cheaper, more beneficial and more equitable than any other. Profits and unnecessary expenses are eliminated. The administrative body in such a system has no motive to give the workmen or his dependants less than they are entitled to, and no motive to charge the employer more than he should pay.

DYE INDUSTRY FOR WALKERVILLE

A company has been organized and is applying for a charter to engage in the manufacture of aniline and other dyes in the town of Walkerville, Ontario. The company, which will have a capital of $1,000,000, has been formed by Hiram Walker and Sons, distillers, of Walkerville. As soon as the charter is secured the company will commence building a $1,000,000 plant at the river front at Sandwich upon property leased from the Canadian Salt Company. It will also build a factory at Walkerville to manufacture toluol.

TO THE SHAREHOLDERS OF

La Banque Nationale

FIFTY-EIGHTH ANNUAL REPORT, 1918.

The fifty-eighth annual general meeting of the shareholders of this institution was held at the office of the Bank on Wednesday, the 12th of June, 1918, at three o'clock p.m.

There were present:—Messrs. Rodolphe Audette, J. B. Laliberté, Victor Châteauvert, Nazaire Fortier, Charles Pettigrew, Nap. Drouin, Nap. Lavoie, Revds. Canon J. C. Arsenault, Tancrède J. Pâquet, Messrs. Lt.-Col. Chas. A. Chauveau, Alph. A. Dechêne, J. F. Dumontier, N. Arthur Drolet, Pierre Drapeau, A. S. Garneau, Charles Grenier, N.P., Elzéar Labrecque, M.D., M. A. Labrecque, S. Jules LaRue, N.P., J. C. Lévesque, James McCone, Chas. Noreau, F. X. Rainville, Alf. A. Roy, Zotique Turgeon, Geo. V. Tessier, Cyrille Tessier, N.P., L. P. Thibault, etc., etc.

Mr. Rodolphe Audette was called to the chair and Mr. P. Lafrance was requested to act as secretary.

Before proceeding to the reading of the annual report, the following gentlemen were elected scrutineers, viz.: Messrs. N. Arthur Drolet, Charles Grenier, N.P., Charles Noreau.

The president read the following report of the affairs of the Bank:—

REPORT OF THE BOARD OF DIRECTORS.

Gentlemen Shareholders:—

The Directors have the honor to submit to your approbation the result of the operations of the Bank for the year 1917-18, by the statement of Profit and Loss Account, together with the statement of the Assets and Liabilities of the Bank:—

The balance to the credit of Profit and Loss, on 30th April, 1917		$ 59,965.83
The profits of the year, after paying interest on deposits and deducting bad and doubtful debts		435,283.20
Forming the sum of		$495,249.03
Which has been disposed of as follows:—		
To Quarterly Dividends, at the rate of 9% per annum (i.e., 2¼% payable 1st August, 2nd November, 1st February and 1st May)	$180,000.00	
To Reserve Fund	100,000.00	
To Depreciation on securities and for contingencies	100,000.00	
To Depreciation on Bank premises	35,000.00	
To Depreciation on fixtures	10,000.00	
To Pension Fund	15,000.00	
To War Tax on circulation	20,000.00	
		460,000.00
Leaving to the credit of Profit and Loss a balance of		$ 35,249.03

This past year has been for the Bank an exceptional one, both as to profits and general increase of its business. It is not our intention to make lengthy comparisons on the items mentioned in the statement; we will simply mention the principal ones.

We had, last year, notes of the bank in circulation, to the amount of $3,591,956. This year, the item is $4,260,980, an increase of $669,024, which explains the $1,700,000 that we have on deposit in the central gold reserves. This item of circulation, which we curtail as much as possible, shows the large capacity which the bank has to circulate its notes through its branches and sub-agencies and the amount of its business, so much divided. This facility for circulating our notes, which could easily reach $6,000,000, will certainly justify and necessarily oblige an increase of capital. Our deposits, last year, were at $27,618,301.28; this year, they are $27,213,155.01. This item deserves an explanation, because, though it shows an apparent diminution of $405,145.37, there is really an increase, as last year included in this item was an amount of $1,292,190.09 due to the Canadian Government. This year, we have made a separate item of what is due to the Government, so that the increase on the regular deposits is $887,044.72. The item mentioned as "deposits received elsewhere than in Canada" represents those of our branch at Paris, France. They are, this year, $1,211,921.61; they were, last year, $1,238,112.96: a small diminution of $26,191.35.

The Paris branch, in spite of the war, showed, up to the end of February, a very satisfactory increase, but the German offensive of March last had for effect drawings of large amounts, and those drawings are repeating themselves in this second German offensive. We are, however, encouraged by the confidence of our Parisian depositors, not only by their confidence in the bank, which, whatever happens in Paris, would reimburse them, but by their confidence in the final success of the war; otherwise, they would have drawn their moneys on a larger scale.

This general increase of $887,044.72 in the deposits does not seem large, at first sight, but it is a large one, if we consider the Victory Loan and the sale of debentures, in general, which is made by drawings on the deposits of the banks. This sale of municipal and industrial debentures is practically a new kind of business in the Province of Quebec, as also the Government's loans; we must expect that our deposits will feel the effect of such a new departure, at least in the increase, which will be less than the increase we would have expected otherwise.

If, this year, we have been able to increase our deposits, in spite of the investments of our depositors, the reason is due to the abundance which exists in our parishes, where the products of the farm have obtained high prices which give to agriculture a plenty and which make it what it deserves to be: the most prosperous of our industries.

Our loans have also increased considerably. We have contributed, like the other banks, our share to the loans made to the Government, without restricting our loans to commerce, to industry and specially to agriculture, which we encourage by all our efforts, in giving instructions to all our managers to favor the farmers as much as possible, so that they may improve their farms, their herds and all other things which may better their condition and increase their production. Agriculture is a very important factor for La Banque Nationale. We are making the greatest possible efforts to promote it, knowing that it is, at the same time, advantageous to the Bank, and also contributes to the development of our Province. We are the bank most interested, as we are the one having the greatest number of branches and agencies in the farming country-places of the Province. We desire to identify ourselves, more and more, with the farming community without neglecting the commercial and industrial interests.

We believe in a policy of prudence. We are going through a difficult period and if, since the beginning of the war, the Bank and the country have had prosperous times which seems a sin when we see misery and death ruling in European countries, we must prepare ourselves to have our turn of bad times. This preparation will be arrived at by prudence and economy. Prudence teaches us to curtail advances to the public, to divide them so as to encourage commercial and industrial ventures of first utilities, only giving parsimoniously and the least possible to luxury, fashions, fancies and amusements. This policy, our merchants and our industrials should follow. It is a policy of restriction in buying and in the manufacture of objects that are not of first utility and a diminution of stocks in general, so that, when bad times arrive,—and they are sure to come—we will not be taken by surprise. We do not say anything new; the economists of the country, the governments and the Bankers' Association are expressing the same ideas.

This year, the opening of branches, agencies and sub-agencies has been limited; we opened a branch in Mont-Laurier and closed one at Laprairie. Seven agencies were opened and these before an agreement between banks was made not to open any during the war; four were closed.

According to what was promised at the last annual meeting, a dividend at the rate of 9 per cent. was paid. The reserve is increased by $100,000, and an amount of $100,000 is appropriated for depreciation on values and contingencies, as a further protection for our assets. We considered that it was necessary to write off from our fixtures $10,000 and from our premises, $35,000. We believe in the necessity of such a reduction, once in a while, so that both of those items be kept at their minimum value. The amounts paid to the

Pension Fund and the War Tax on our circulation are the usual amounts.

The inspection of all the bank, its branches and agencies has been carefully made. Our staff, though conscription imposed upon it more responsibility and work, has given complete satisfaction. We have been obliged to take into consideration, in regard to them, the high cost of life and have voted them, outside of the regular increases of salaries, a special war indemnity to the amount of $30,569.45.

Last year, we expressed the wish to see the end of the war before this meeting; unhappily, it goes on more furiously than ever. Let us pray and hope that Providence will favor the armies of the Allies and give us Peace in Victory before our next meeting.

R. AUDETTE,
President.

N. LAVOIE,
General Manager.

TO THE
SHAREHOLDERS OF LA BANQUE NATIONALE

In accordance with sub-sections 19 and 20 of Section 56 of the Bank Act, 1913, and as auditor for La Banque Nationale, I have the honor to submit the following report:—

I have compared the above balance sheet with the books and vouchers kept at the Head Office of La Banque Nationale and with the certified returns from the different branches to the 30th April, 1918; I have checked the cash and verified the securities and other valuables at the Head Office and at four of the principal branches of the Bank; and, after having obtained all the necessary information and explanations, I certify that, in my opinion, this balance sheet represents a true and correct view of the state of the bank's affairs up to the 30th April, 1918.

I have, in addition to the above-mentioned, during the current year, checked and verified the cash and securities at different branches and Head Office of the Bank and found them to be in agreement with the entries on the books of the Bank relating thereto.

I may also mention that the different officials of the Bank have given me, to my satisfaction, all the required information concerning the Bank's affairs and transactions which have come under my notice, and I consider them within the power of the Bank.

OCT. BELANGER, L.I.A.,
Auditor.

Quebec, May 17th, 1918.

Moved by Mr. Rodolphe Audette, seconded by Mr. J. B. Laliberté: That the report of the Directors and the statements now read be adopted, printed and published for distribution among the shareholders. Adopted.

Moved by Mr. Charles Grenier, N.P., seconded by Mr. Alph. A. Dechêne: That Mr. Octave Bélanger, accountant duly qualified as per section 56 of the Bank Act, be appointed auditor of the Bank for the year 1918-19, with the same remuneration. Adopted.

The election being then proceeded with, the following gentlemen obtained the largest number of votes and were consequently duly elected Directors for the ensuing year: Messrs. Rodolphe Audette, J. B. Laliberté, Victor Châteauvert, Nap. Drouin, Naz. Fortier, Chas. Pettigrew and Nap. Lavoie.

The president left the chair and Mr. A. S. Garneau being called thereto, it was moved by Mr. Charles Noreau, seconded by Mr. Arthur Drolet: That thanks be tendered to the President and Directors for the services they have rendered to the shareholders during the past year. Adopted.

Moved by Mr. Zotique Turgeon, seconded by Lt.-Col. Charles A. Chauveau: That the thanks of this meeting are due and tendered to Mr. Rodolphe Audette for his services in the chair, and also to the scrutineers and secretary for the fulfilment of their respective duties.

This motion was adopted and the meeting adjourned.

R. AUDETTE,
President.

P. LAFRANCE,
Secretary.

Quebec, 12th June, 1918.

At the meeting of the Directors held on the same day, Mr. R. Audette was re-elected President, and Mr. J. B. Laliberté, Vice-President of the Bank for the ensuing year.

P. LAFRANCE,
Secretary.

WANTED $10,300

Security Value $773,219.00

WE WILL SELL $10,300 City of Courtenay 6% 20-Year Bonds—Price 92½

Will sell in lots of $100 and upward. Each one hundred dollar bond will cost you $92.50. Interest is payable half-yearly. The City of Courtenay is located on Vancouver Island in the midst of one of the finest farming districts of British Columbia. It has a population of about 500 and enjoys what is probably the lowest tax rate of any city in British Columbia. It has its own electric light plant and unlike many other municipalities is not burdened with debt. Its total bonded indebtedness being only $20,000, of which the above issue forms a part. Courtenay's property assessment is:

Lands	$552,969.00
Improvements	220,250.00
Total	$773,219.00

Therefore these bonds are an absolutely safe investment

FINANCES IN THE ORIENT

China is Experiencing Unprecedented Prosperity, Which is Reflected in the Republic's Finances

The annual review of world trade with special reference to the trade of the Far East made by the Hongkong and Shanghai Banking Corporation at its annual meeting, which is taken as the chief authoritative review of Oriental trade and finance each year, shows exceptionally favorable financial conditions in Far Eastern countries during 1917. While the unfavorable effect of war was felt in all countries, particularly as regards shipping, conditions in China, Japan and India were such as to give very favorable returns for the year. Of the trade and financial year for China the report says in part:—

Notwithstanding the many disabilities, such as exchange fluctuations, political disturbances, floods and shortage and uncertainty of tonnage, under which it has been carried on during the past year, trade in China has been on the whole satisfactory for both foreign and native merchants. The world's production of raw materials being now barely sufficient for the world's needs, it is not surprising that the demand for the produce of central and northern China—cereals, cotton, wool, oils, hides, etc.—should be maintained, despite the higher rates of exchange, freight and insurance.

In former years a high level of exchange tended to curtail exports from China, but this was not so in 1917, and European and American buyers have been able to pay the prices asked from this side. It is to be noted also that America has consumed large quantities of Chinese produce which before the war found a market only in Europe. The result has been that the native merchant has received higher prices for most of his produce than he has done for many years past. He has, therefore, been able to pay the higher prices required for imported commodities; and considering the difficulties experienced in the supplying markets, the trade in piece goods and other imports has been satisfactory.

The risks and difficulties inseparable from the interchange of commodities, already greatly increased by war conditions, have been intensified, and the strain borne by merchants and bankers, with their depleted staffs in carrying on the business of the country, in maintaining the supplies essential to the prosecution of the war, and at the same time in steering clear of financial trouble, has been arduous and severe.

From a financial point of view, the past year was even a more prosperous one for China than its predecessor. The total maritime customs collection for 1917 was 38,177,000 haikwan taels, equivalent, at the average rate of exchange of 4s. 3.13-16d., to £8,241,857 ($40,109,000 United States gold), as against a collection for the previous year of 37,764,000 haikwan taels, equivalent, at the rate of 3s. 3.13-16d., to £6,264,496 ($30,486,175 United States gold).

Revenue is Adequate.

Considering the handicap imposed upon China trade by adverse war conditions and a dearth of tonnage, the increase in the actual collection is no less remarkable than that of the sterling equivalent, due to the extraordinary high rate of exchange. Thanks to this latter factor, the maritime customs revenue during the past year has not only met the service of the various loans which are a first charge upon it, but has paid the whole of the Boxer Indemnity service and, for the last six months of the year, the service of the Reorganization Loan, which, by a special clause of the loan agreement, is charged upon surplus customs' revenues. After the discharge of all these liabilities, there still remained a surplus of 10,000,000 taels, of which 2,000,000 taels was released to the Chinese government in August last, and the balance has since been paid into salt revenue account in reimbursement of contributions previously made toward payment of the Boxer Indemnity.

The net salt revenue collection paid into the group banks during the year 1917 amounted to $70,627,249, local currency; from which, after discharging all liabilities and maintaining a fixed reserve of $10,000,000, an amount of no less than $68,613,370 (including contributions received from the maritime customs) was released to the free use of the Chinese government.

In addition, China has now entered upon negotiations with its allies for the revision of the customs tariff to an effective 5 per cent., which may be expected to result in a substantial increase to the revenue. The country's revenue is also gaining by the slow but gradual improvement in railway earnings. The earliest of them in which we were interested, the Shanghai-Nanking Railway, is now more than paying its way. After meeting all its current expenses, including the payment of interest on its debt in sterling, the accounts for 1916 show a surplus of about £17,000.

BRITISH WOMEN IN THE WAR

According to official announcement there are, at the present time, 4,538,000 women and girls employed in classified trades that are under the jurisdiction of the British Board of Trade. These figures are exclusive of women employed in small trades and on the land. Domestic servants are also excluded. All hospital helpers, Red Cross and other nurses are not counted. Taking all classes of British women war workers the total is considerably over 5,000,000.

Less than 200,000 women were employed in Great Britain before the war began and these were mostly in textile mills. The report for 1917 gives 198,000 in government offices exclusive of civil service and local government. The latter two employed 146,000. Munition workers numbered over 800,000; workers in chemical and engineering plants, 200,000; land workers, 100,000 (with an additional 30,000 called for this summer) and thousands as mechanics, motor drivers, ambulance drivers, street car and omnibus operators, cab drivers, every sort of railway work, letter carriers, bank clerks and office workers of every kind. Recruiting goes on steadily in all these lines and the response has been to the tune of 15,000 a week.

BRANT COUNTY TAX RATE

The total sum to be raised in Brant County for the present year is $129,812.50, exclusive of the provincial war tax. Of this sum $96,019 must come through taxation. The special war grants include $6,500 for the Red Cross, $30,600 for the Patriotic Fund, and $5,000 for the Y.M.C.A. Red Triangle. A levy of 1.6 mills will also be required to cover the work of roads and bridges.

WINNIPEG'S FINANCIAL POSITION

The city of Winnipeg has been well administered, financially, during the past year, according to the report just issued. The annual statement of the Winnipeg sinking fund trustees for the year ended April 30th, 1918, shows total assets amounting to $9,100,139, a gain of $957,444 over the previous year. About 40 per cent. of this total is invested in government bonds, or bonds of the city of Winnipeg, the balance being mostly in western municipality debentures or in the Bank of Montreal. Securities purchased at a discount are valued at cost, and when they mature a profit will, therefore, be realized. Those which were purchased at a premium, on the other hand, have been written down to par. The total premiums written off in this way amount to $68,808. The interest earnings for the year were over $500,000, and, after deducting interest requirements, the excess interest earnings are $198,166. Included in this total is an amount of $14,177, which consists of profit realized on maturing securities which had been carried on the books below par.

The total surplus income including the amount carried forward from last year, was $249,066. Fifty thousand dollars was transferred to investment reserve account, at the credit of which there is $250,000. It will be observed that the average interest earned during the year was 6.123 per cent., which is considerably above the interest estimated in fixing sinking funds rates. Only one of the investments, the debentures of a school district, is in arrears, and it is being settled at present.

During the year $1,500,000 was wiped off the city's debt account, and during the last four years a total of $6,000,000 has been cleared off the books. This reduction in the city's debt is a very agreeable contrast to the heavy increases which have been incurred by other Canadian municipalities. It is partly accounted for by the fact that Winnipeg has paid for patriotic grants, etc., out of current taxation without adding anything to the debt for this purpose. The complete statement appears on another page of this issue.

CANADIAN PULP AND PAPER TRADE

Bulletin No. 5 of the Canadian Pulp and Paper Association calls attention to the fact that in the ten months ending January, 1918, we imported paper and manufactures of paper to the value of $6,330,823. Most of these goods could have been obtained just as well in Canada, and, in view of the adverse trade balance with the United States, which now amounts to $400,000,000 per year, the purchases should be made here.

Canadian exports of pulp and paper products now amount to about $60,000,000 per annum, or about $200,000 for every working day of the year. Only five years ago the total manufactured exports were around $55,000,000, and the trade balance was heavily against us. The pulp and paper exports have played an important part in establishing a balance in our favor and by reducing imports of such products. From the United States we could still further lower our unfavorable balance with that country and increase the total balance of trade in our favor.

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Kitchener, Ont.—The city has sold debentures to the amount of $45,694, bearing interest at the rate of 6 per cent.

Strathroy, Ont.—Messrs. Brent, Noxon and Company, of Toronto, have been awarded a block of $13,835 6½ per cent. bonds, payable in 20 annual instalments.

Woodstock, Ont.—Debentures to the amount of $20,000 and $18,000, running for 10 years and bearing interest at the rate of 6 per cent., will be issued by the city.

Dartmouth, N.S.—The town has awarded a block of $150,000 6 per cent. bonds to H. M. Bradford, of Halifax, N.S. He offered 98.21 for 10, 15 or 20-year bonds.

County of Peterboro, Ont.—Messrs. C. H. Burgess and Company, of Toronto, have purchased a block of $15,000 5½ per cent. 20-instalment bonds. The proceeds will be used for enlarging and furnishing the offices in connection with the county courthouse and jail. They also purchased a block of $7,000 5 per cent. 20-instalment bonds. The proceeds will be used for bridge construction and improvement of county property.

Edmonton, Alta.—Tenders for Alberta school district debentures were opened on June 10th, and the five different blocks were awarded as follows: Block No. 1, Rural, 10-years 7 per cent.—Lewis S.D., $1,600; Two Rivers S.D., $500; Fifteen Mile Lake S.D., $1,500; total, $3,600. Block No. 2, Rural, 10-years 7 per cent.—Amethyst S.D., $1,500; Wilcox S.D., $1,200; Shank's Lake S.D., $1,000; total, $3,700. Block No. 3, Rural, 10-years 7 per cent.—Shaftesbury S.D., $1,200; Creek Valley S.D., $750; Hillanvale S.D., $1,200; total, $3,150. The three blocks were awarded to Messrs. Macneill and Young, of Toronto, all at 98.03. Block No. 4, Rural, 6-years 7 per cent.—Hillman S.D., $300. The block was awarded to Messrs. Brent, Noxon, and Company, of Toronto, at 97.02. Block No. 5, Consolidated District, 10-years 7 per cent.—Sundial Consolidated S.D., $5,000. The block was awarded to Messrs. W. L. McKinnon and Company, of Toronto, at 99.

Victoria, B.C.—The corporation of the city of Victoria offers for sale the following debentures:—

Due date.	Amount.
September 15, 1919	$ 2,500.00
October 15, 1919	20,000.00
September 15, 1920	1,500.00
October 15, 1920	25,000.00
October 15, 1921	17,000.00
May 15, 1922	2,000.00
September 15, 1925	500.00
October 15, 1927	384.18
Total	$68,884.18

These debentures are a direct obligation of the city of Victoria, are in denominations of $500, bear interest at the rate of 5 per cent. per annum, payable half-yearly, and are payable as to both interest and principal at the office of the Bank of British North America in either London, New York, Montreal, Toronto, or Victoria at holder's option. They are free from taxation as personal property by the province of British Columbia, and bear the certificate of the inspector of municipalities for British Columbia. This issue is offered to the public at a rate to yield the investor 7 per cent. per annum, interest to commence from date of purchase.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from June 4th to June 7th, 1918:—

School District.—Currie, $2,000 10-years not ex. 8 per cent. instalment; John Lavender, Dirt Hills, Sask.

Rural Telephone Companies.—Turn Hill, $5,350 15-years not ex. 8 per cent. annuity; J. A. George, Rush Lake, Sask. Wiseton, $3,500 15-years not ex. 8 per cent. annuity; E. M. Holmes, Wiseton. Storthoaks, $900 15-years not ex. 8 per cent. annuity; E. A. Handfield, Storthoaks.

The following is a list of debentures reported sold from June 4th to June 7th, 1918:—

School Districts.—Golden Valley, $2,000, Beehive, $2,500; Waterman-Waterbury Manufacturing Company, Regina. Omand, $1,000; A. E. Gudelot, Kinistino. Orillia, $2,400; Nay and James, Regina.

Rural Telephone Companies.—Clayton, $500, Turvin, $13,000; W. L. McKinnon and Company, Regina.

SASKATCHEWAN BOND ISSUE

The syndicate which recently purchased $1,500,000 of province of Saskatchewan 6 per cent. bonds at 94.625 and interest, offered them at 96.62 and interest, yielding 6.30 per cent. The issue was oversubscribed within four days.

URUGUAY TO MAKE BOND ISSUE

The republic of Uruguay is contemplating the purchase of the Uruguayan Central Railroad and a number of public utilities from British interests. For this purpose it is proposed to issue government bonds to the amount of 60,000,000 pesos, or about $64,000,000 in our money. As very few of the bonds could be sold locally, very high rates would have to be paid in the international money market. It is proposed to create a market in the following manner: Exporters are to be compelled to receive 25 per cent. of the selling price of their goods in these bonds. Those who are engaged in the export trade are the most prosperous class in the country at present, and this would be a case of conscription of wealth from the most easily available source.

ALBERTA BOND SALE

The province of Alberta last week sold $800.000 of bonds to the Canada Bond Corporation and C. H. Burgess and Company, of Toronto, at 95.83 and interest. The complete list of bids was as follows:—

Canadian Bond Corporation & C. H. Burgess & Co.	95.83
Wood, Gundy & Company	95.781
Dominion Securities Corporation	
N. A. Mackenzie & Company	
Brent, Noxon & Company	
G. A. Stimson & Company	95.37
Exford Securities Corporation	95.33
R. C. Matthews & Company	95.17
C. Meredith & Company	
A. Jarvis & Company	
A. E. Ames & Company	94.881

The issue is being offered to the public at 97.08 and interest, yielding 6.40 per cent.

LONDON ASSURANCE COMPANY

According to the annual report of the London Assurance Company for the year ended 31st December, 1917, the premium income from the fire department amounted to $4,363,625, and the losses inclusive of all claims amounted to $2,076,445. The balance at the credit of the fire fund is now $4,500,000. The sum of $424,970 was transferred to profit and loss account. The general reserve fund is $3,150,000, the life assurance fund $13,771,835, the capital and leasehold redemption fund $91,305, accident fund $189,485, marine fund $6,750,000, and the investments depreciation account $1,500,000. The company holds $6,583,855 of British government securities, and large amounts of mortgages, Indian, Colonial and foreign government, provincial and municipal securities, and railway and other debentures and stocks.

The head office for Canada is located in Montreal, and Messrs. W. Kennedy and W. B. Colley are joint managers for the Dominion.

The official administratorships of the entire province of Saskatchewan, instead of being confined to two trust companies as hitherto, have been allocated to the more important trust companies interested in the province, and the judicial district of Battleford, which runs from Borden on the east to the boundary with Alberta, has been assigned to the Saskatoon office of the Northern Trusts Company, who have other important interests there. Their representative is the well-known Saskatoon financial agent, Mr. J. S. Carmichael.

DOMINION STEEL CORPORATION'S REPORT

Production Has Suffered Through Labor Conditions—Redemption of Funded Debt

The annual meeting of the Dominion Steel Corporation, Limited, was held in Montreal on Friday, the 14th inst. According to the report which has been prepared for the year ended March 31st, 1918, the earnings for the year were $11,030,112. The following is a summary of the profit and loss account:—

Net earnings (including interest on investments and surplus funds), after deducting all manufacturing, selling and administrative expenses and government taxes for the year ending March 31, 1917, but before charging provision for sinking funds, depreciation and interest ..		$11,030,112
Deduct provision for sinking funds, depreciation and renewals, etc.		1,384,241
Interest on bonds and debentures		1,064,209
Less preference dividends for year ending March 31, 1918:		
Dominion Steel Corporation, Limited ..	$420,000	
Constitutent companies	560,000	
		980,000
		$ 7,601,660
Add balance April 1, 1917		7,596,892
		$15,198,553
Deduct dividends on common shares of Dominion Steel Corporation, Limited (aggregating 4½ per cent.)		1,444,396
Balance March 31, 1918		$13,754,157

Funded Debt Reduced.

Disbursements for bond interest have been reduced from $1,230,203 to $1,064,209 and there was received for interest on surplus funds the sum of $374,076. No deduction from profits was necessary to provide for the extinction of discount and premiums on securities, the entire balance on debit of this account having been disposed of by special appropriation from surplus last year.

During the year in addition to the regular dividends on the preference shares of the corporation, and the preferred stocks of the Dominion Coal Company and the Dominion Iron and Steel Company, two quarterly dividends of 1 per cent. each and two of 1¼ per cent. each, making 4½ per cent. altogether, were paid to the holders of the common shares of the corporation. On March 31st, 1917, an appropriation of $3,000,000 was made from surplus for special construction expenditures and for government taxes.

The capital expenditures for the year amounted to $2,435,073, the chief items being upon the property of the Dominion Iron and Steel Company and principally in respect to its mines at Wabana, its coke ovens and blast furnaces. Current and working assets have increased by $5,638,809 and current liabilities have increased by $1,066,107.

Funded and mortgage debts have been decreased by almost $1,000,000. The following bonds and debentures having been retired:—

Dominion Coal 5 per cent. 30-year bonds	$138,500
Dominion Iron and Steel Company 5 per cent. 30-year bonds	131,000
Dominion Iron and Steel Company 5 per cent. consolidated 5 per cent. bonds	85,653
Dominion Shipping Company serial debentures	117,000
Dominion Steel Corporation 6 per cent. 5-year notes	470,606
Employees 6 per cent. debentures	17,829
	$960,588

Production Has Fallen Off.

The coal output for the year was as follows:—

Year ending	Gross tons.
March 31st, 1918	3,781,615
March 31st, 1917	4,279,772
March 31st, 1916	5,261,198
March 31st, 1915	4,550,512
March 31st, 1914	5,047,683

The decrease in the coal output is attributed chiefly to the operation of the Military Service Act. The production of iron and steel in the past two years has been as follows (in tons):—

	Year ending March 31st, 1917.	Year ending March 31st, 1918.
Pig iron	346,926	332,231
Steel ingots	377,079	374,332
Blooms and billets for sale ..	144,051	139,557
Rails	17,495	17,103
Wire rods for sale	67,492	73,650
Bars	5,259	1,542
Wire	35,142	27,165
Nails	20,175	16,347

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended June 14th, 1918:—

Penn Canadian Mines, 65,975; McKinley-Darragh Mines, 65,821; Buffalo Mines, 88,000; La Rose, 65,837; Dominion Reduction Company, 166,500; Mining Corporation of Canada, 214,922; Nipissing Mining Company, 171,835. Total, 838,890.

The total shipments since January 1st now amount to 13,156,173.8 pounds, or 6,578.1 tons.

DEVELOPMENT OF NEW BRUNSWICK COAL

A group of United States capitalists are considering investing in the coal industry in New Brunswick. A party recently toured the maritime provinces with Fuel Controller Magrath. Included in this party were F. E. Peabody and W. H. Leland. They propose investing $500,000 in the fields in the neighborhood of Minto, New Brunswick. The provincial government is understood to be quite in favor of giving them the opportunity.

ANGLO-AMERICAN EXCHANGE

During the week ended June 14th gold shipments were sent from the Bank of England to the Federal Reserve Bank to the amount of $15,000,000. The shipment itself actually came from Canada, and is a part of the Bank of England's reserve at Ottawa.

The Federal Reserve Bank has had on deposit on the Bank of England a considerable sum since the time last year when British bankers paid off notes on which they had borrowed $52,000,000 in the United States.

The Bache Review states that the English bank has assembled during the year at Ottawa an amount varying from $100,000,000 to $200,000,000, part of which has been imported from South Africa by way of the Pacific coast. There has been some discussion, but no official confirmation to the effect that the British government had turned over to the United States the task of financing the Allies, and that hereafter she would finance her own war purchases.

The Bache Review also refers to the admirable manner in which the Bank of England has met the enormous financial strain. The correspondent of the Wall Street Journal, Mr. Herbert M. Casson, makes the statement that there is less personal freedom to-day than there was under King John. The Magna Charta has been set aside until after the war. Railroad fares have just been increased by 10 per cent., a total increase of 60 per cent. Prices are almost altogether at a new high level. One redeeming feature, however, is that food has never been so evenly distributed. The rich never had so little, the poor never had so much. The war has solved many problems in the way of political strife and industrial enmities. There is no labor and there is no capital, but both are united for the one purpose

Wood and Kirkpatrick have removed from 15 Wellington Street East to Rooms 204-5 Excelsior Life Building, Toronto.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

City Dairy Company.—The company, which recently declared a dividend of 1¾ per cent. on the preferred stock, has improved its position since the last annual report. It is understood that never in the company's history has its business and financial condition been better. The common dividend was passed in September, 1916, and the preferred in December, 1916. It is not unlikely, in view of the company's good showing, that deferred dividends will be paid off within the next year.

North American Pulp and Paper.—Chicoutimi Pulp Company has acquired a controlling interest in the Saguenay Light and Power Company which operates an electric light and power system in the town of Chicoutimi, Quebec, and the surrounding territory. Chicoutimi Pulp Company is a subsidiary of the North American Pulp and Paper Company, which has increased its timber limits by the acquisition of the Battle Island properties. It now holds 561,000 acres of freehold timber land and 700,000 on leasehold.

Sault Ste. Marie Railway Company.—The following is a statement of revenue and expenses of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company for the month of April, 1918:—

Main Line:	
Total operating revenue	$1,514,160.47
Total expenses and taxes	1,423,131.13
Operating income	$ 91,029.34
Chicago Division:	
Total operating revenue	1,030,159.88
Total expenses and taxes	905,378.31
Operating income	$ 124,781.57

Consolidated Mining and Smelting Company.—The company makes the following statement of ore receipts at Trail Smelter, from May 22nd to May 31st, 1918, inclusive, and from October 1st, 1917, to date in tons:—

Company's mines:		
Centre Star	477	41,505
Le Roi	477	54,249
Sullivan	1,290	51,988
St. Eugene	79	820
Emma	107	23,142
Lucky Thought	....	516
Molly Gibson	....	993
Highland	44	406
Ottawa	....	29
No. One	506	4,554
Richmond Eureka	....	36
Other mines	1,497	53,031
Total	4,477	231,269

International Nickel Company.—The annual statement for the year ended March 31st, 1918, shows earnings of $15,991,485, after deducting manufacturing, selling expense, ordinary repairs, maintenance and foreign taxes. With other income, the total was $16,181,500. From this was deducted administrative and head offices expenses amounting to $4,200,859, and sums for depreciation of plants, mineral exhaustion, etc., leaving profits of $10,129,987. After paying 6 per cent. on the preferred stock and 6 per cent. on the common for the first quarter, and 4 per cent. for the other three quarters, a surplus of $2,065,003 was carried forward in the balance sheet. The company has operated at maximum capacity during the year, except for slight interruptions, due to the fuel and transportation situation in the winter. The new refinery at Port Colborne, Ontario, is approaching completion, and it is expected that it will be put in operation during the coming summer. The cost of this plant up to March 31st, has been $5,314,091, and over $1,000,000 was spent during the year on the company's other plants in Canada and the United States.

Middle West Utilities Company.—During the year ended April 30th, 1918, this company made considerable extensions in its holdings, and also experienced a satisfactory year in the way of income. The following is a statement of its income and expenditure:—

Income		$1,955,210.77
Expenditure:		
Administration expense	$194,921.64	
Miscellaneous charges, including taxes, etc.	43,314.32	
		238,235.96
		$1,716,974.31
Interest on collateral notes and bonds	$550,939.00	
Interest on collateral loans, etc.	124,433.92	
		675,372.92
Net income for year		$1,041,601.89

During the fiscal year the company acquired the outstanding stock of the Southern Illinois Railroad and Power Company, the Hamilton Utilities Company of Benton, Illinois, the Hoopeston Gas and Electric Company, and one or two other companies.

Canadian Converters' Company, Limited.—The annual report for the year ended April 30th, 1918, gives the following statement of profits:—

To interest on bonds	$ 23,940
To reserve for depreciation	27,000
To reserve for bad debts and provision for war tax, 1917	21,500
To dividends paid	52,005
To dividend payable May 15th, 1918	17,335
To balance at credit	373,316
	$515,096
By balance	$297,207
By profits of subsidiary companies to date	217,316
By interest accrued on Victory bonds	572
	$515,096

The profits from the subsidiary companies is the best result yet attained by the company, being an increase over last year of about $13,000. Bank loans, which in the last statement amounted to $70,000, have been wiped out entirely, and the company has purchased $25,000 of Victory bonds. A dividend of 4 per cent. per annum was paid from 1912 to 1915, when it was reduced to 2 per cent., and was passed entirely in August, 1915. One per cent. was paid during each quarter of the past year, however, so that 4 per cent. has again been realized by the investors. The assets are now $2,786,070, and the balance at profit and loss is $373,316.

LA BANQUE NATIONALE

The annual statement of the La Banque Nationale, reference to which was made in our issue of June 7th, appears upon another page of this issue. While the bank has not extended its business as rapidly as some of the other Canadian banks, its management, especially during the past twenty years, has been very careful and conservative, and the bank has made steady progress. This is illustrated by a comparison with the figures in 1910:—

	1910.	1918.
Notes in circulation	$ 1,884,226	$ 4,260,980
Deposits payable after notice	7,756,485	20,949,282
Deposits on demand	2,603,807	5,051,952
Capital paid up	2,000,000	2,000,000
Reserve fund	1,200,000	2,100,000
Profit and loss account	26,014	35,249
Specie	151,454	286,091
Dominion notes	681,466	2,232,990
Deposit with Dominion government for security of note circulation	100,000	100,000
Call loans on stocks and bonds	879,803	2,235,169
Current loans, discounts and advances to the public	11,926,574	23,372,287
Bank premises, furniture and stationery	565,844	1,170,552

The bank practically confines its activity to Quebec province, which it covers thoroughly with 233 branches. Outside of Quebec province it has a branch in Ottawa and agencies in Bourget and Curran, Ontario.

EXPENSES AND PROFITS OF AGRICULTURE

Prices of Produce and of Supplies Have Both Advanced Substantially

The Northwestern National Bank, in its review for June, 1918, discusses the multiplicity of lines of farm implements, and the possibility of conservation in this field. The Commercial Economy Board of the Council of Defence has been gathering information on this subject, and its report concludes as follows:—

"It will be seen that the simplification of implement lines will not only save labor in the implement factories and steel mills by making possible longer runs on the machinery; it will also release a portion of the machinery for work on munitions, ships' parts, etc. In addition it will cut down the amount of stock the jobbers and retailers will have to carry, thus releasing capital for the purchase of government securities."

The Review continues to discuss the subject as follows:— "For a long time vehicle manufacturers have been asking why there should be a multiplicity of widths and thicknesses of wagon tires, heights of wheels and widths of shafts. Very well; they have now been standardized, for good and all. Also, why should such rural frivolities as lazy-backs for wagon seats, and left-hand plows, both heretofore made in large quantities, be allowed to consume the equipment of our factories, the investment capital of our dealers, and so forth? Very well, then, lazy-backs are taboo; left-hand plows are sent to the limbo, where languishes other dodo luxuries, such, doubtless, as the larboard moustache cup, and, perhaps, the left-handed monkey wrench.

"Also directing attention to the implement industry was the action of the Senate, on May 13th, directing the Federal Trade Commissioner to investigate the cause or causes for the high prices of agricultural implements and machinery required by farmers, and to report 'whether under the facts found, the farmers are required to pay an unreasonable price for things they are required to purchase and use on the farms in the production of food products, and whether they are thereby prevented from making a fair profit for their labor and money expended toward production.'

"Again, on the day following this action, the whole farm implement business, under the proclamation of the president, was placed under federal control, entailing the licensing, not later than June 20th, 1918, of all 'individuals, partnerships, associations and corporations,' engaged in the business of the importation, manufacture, storage and distribution of farm equipment. Unreasonable profits are prohibited, and equipment shall not be resold within the same trade without reasonable justifications, such a transaction being deemed a 'wasteful practice.'

"A later official notice explains that retailers of farm equipment are not required to procure licenses, 'but they must not profiteer.' Authority for the prohibition of such profiteering by retail dealers is given in the Food Control Act. The proclamation especially enumerates 78 articles, including tractors, trucks, binders, harvesters, windmills, silos, fencing, many small and large tools, and in fact, all 'tools, utensils, implements, and machinery required for farm use in actual production of foods and feeds.'

"Thus it seems that with prices fixed for such important products as wheat and wool that the farmer has to sell, there will be a corresponding regulation affecting what the farmer has to buy. Flour and sugar have been under government control for some time. The fertilizer industry was placed under Federal control on March 21st, and although this will affect the northwestern farmer very little, it indicates the government policy. An extensive inquiry into the binder twine industry has been instituted, though the regulation of the price of sisal, swollen to the point of extortion, is unfortunately beyond our control. The supervision of the sale of tools and implements will tend further to stabilize agricultural balance sheets.

High Prices Compensate for High Costs.

"The cost to the farmer of seed, labor, equipment and home necessities, is high, but it is offset by increases in the income from the sale of his products and the increase in the value of his land. Farm wages have not advanced as rapidly during the last four years as farm land values. Since the season of 1912-1913, up to the season of 1916-1917, increases in prices of articles that farmers have to buy surpassed the increases in crop prices; during the past season, however, crop prices have soared ahead, and the farmer has a better chance for profit on his toil and investment.

"It is not so much a question what the price of wheat or meat or wool may be, as what their bartering powers are, and how great an ultimate surplus can be invested in government bonds or certificates of deposit. An illuminating report has been issued by the Department of Agriculture showing the fluctuation during recent years in the prices of articles bought by farmers and the varying amounts of these articles purchasable with the proceeds from an acre of wheat, corn, cotton, or an average of all crops—figures that are countrywide in their scope, and not always, of course, applicable to local conditions.

Advance in Price is General.

"Ninety-four articles of purchase are tabulated in this government list, ranging from tin pans to double wagons. It is almost a flippant comment to state that not a single one of these ninety-four articles commonly bought by farmers has become cheaper in price since 1909; but, of course, the opposing fact is that the prices of all farm products have also increased; we are merely operating on higher levels.

"The article that shows the smallest relative increase since 1909 is coal oil, the 1917 price being 103 per cent. of that of 1909. The next articles on the list, necessary for the maintenance of our farms, are axle grease, cream separators, coffee and plug tobacco, the 1917 cost being 123, 127, 128 and 129 per cent. over that of 1909; fruit jars, rubber boots, tedders, gasoline, scythes and manure spreaders come next, in the order named. Going to the other end of the list, the greatest advances in prices have been made in crude carbolic acid, the 1917 price being 240 per cent. of that of 1909, the next few on the list being, in the order of greatest increase, brooms, hemp rope, lard, binder twine, paris green, calico, wooden buckets, tin dish-pans and grain sacks.

Exchange Value of Wheat is Still Ahead.

"What is most vital to us in the Northwest, however, is whether we can get more or less of these articles with an acre of wheat than we could in 1914, for instance, when the European war started. When the Northwestern farmer goes to town with a unit of agricultural wampum as expressed in an acre of 1917 wheat, can he bring back more or less lumber, coal, plows, shot-guns, shovels or sheeting than he could in 1914 with a like unit?

"He can bring home more now than in 1914, these government figures tell us. The bartering value of wheat is greater. There are six exceptions to this in the 1914 comparison, and only one of these affects the farmer very seriously. This exception is binder twine, which shows a disproportionate rise in price. The returns from an acre of 1914 wheat would purchase 126 pounds of this farm necessity, and only 122 pounds in 1917. An acre of 1909 wheat could be exchanged for 150 pounds of binder twine. The other five articles on this list of 1914 exceptions are hemp rope, lard, paris green, carbolic acid and brooms.

"The rest of these ninety-four items, including such articles as flour, sugar, men's and women's clothing, hardware, wire fencing, harness, and some tools and machinery, were relatively cheaper in 1917 than in 1914 when measured by the purchasing power of wheat in those years.

"In comparing the years 1909 and 1917, the scale is not nearly so uniform. Seven articles are relatively the same now as then; a farmer, were he so fantastically inclined, might have traded the proceeds of one acre of either 1917 or 1909 wheat for 22 pairs of gloves, 12 flannel shirts, 5.2 cwt. of barb wire, 43 boxes of screw hooks, 415 cwt. of steel wire, 18 halters or 1.4 harrows. While there are only six articles that are more "expensive" in 1917, as compared with 1914, there are, as between 1917 and 1909, twenty out of the ninety-four."

PUBLICATIONS RECEIVED

Matachewan Gold Area.—Bulletin No. 34 of the Ontario Bureau of Mines. Well illustrated, and also contains a map of the district.

Messrs. M. J. Walsh and Son have been appointed sole agents for Montreal of the Alliance Insurance Company, of Philadelphia. This appointment was made by Messrs. Robt. Hampson and Son, who are chief agents for Canada of the company in question.

DIVIDENDS AND NOTICES

THE MONTREAL CITY AND DISTRICT SAVINGS BANK

Notice is hereby given that a Dividend of Two Dollars and forty cents per share has been declared on the Capital Stock called and paid up of this Bank, and will be payable at its Head Office, in this city, on and after Tuesday, the second day of July next, to shareholders of record the 15th of June at 12 o'clock noon.

By order of the Board,
A. P. LESPERANCE,
Manager.

Montreal, May 27th, 1918.

CANADIAN CAR & FOUNDRY COMPANY, LIMITED, MONTREAL

Notice is hereby given that a dividend of Three and One-Half per Cent. upon the accrued dividends on the preference stock of the Company has been declared, payable on July 15th, 1918, to shareholders of record at the close of business June 15th, 1918. The transfer books of the Company will not be closed.

Shareholders will confer a favor upon the management by advising The Royal Trust Company, Montreal, Transfer Agents for the stock, of any change in address.

By Order of the Board.
F. A. SKELTON,
Vice-President & Treasurer.

Montreal, June 1st, 1918

THE CANADIAN CROCKER-WHEELER CO., LIMITED

DIVIDEND NOTICE

The directors of The Canadian Crocker-Wheeler Company, Limited, have declared a One and Three-Quarters per cent. (1¾%) dividend on the preferred stock of the Company for the three months ending June 30th, 1918, to shareholders of record June 20th, 1918. Also a dividend of One and Three-Quarters per cent. (1¾%) on the common stock of the Company for the three months ending June 30th, 1918, to shareholders of record June 20th, 1918.

The stock books will be closed from the 20th to the 30th of June both days inclusive.

Checks will be mailed to shareholders on June 29th, 1918.

By Order of the Board.
L. R. GRIMSHAW,
Secretary-Treasurer.

St. Catharines, June 5th, 1918.

PROVINCIAL PAPER MILLS CO., LIMITED

Notice is hereby given that dividends of One and Three-Quarters (1¾%) per Cent. on Preferred Stock and One (1%) per Cent. on Common Stock of this Company have been declared for the current quarter, both payable July 2, 1918, to shareholders of record at the close of business June 15th, 1918.

By Order of the Board.
S. F. DUNCAN,
Secretary-Treasurer.

Dated Toronto, June 4th, 1918.

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of one and three-quarters per cent. (1¾%) on the Preferred Stock of the **Dominion Textile Company, Limited**, has been declared for the quarter ending **30th June, 1918**, payable July 15th to shareholders of record **June 29th, 1918.**

By order of the Board.
JAS. H. WEBB.
Secretary-Treasurer.

Montreal, 10th June, 1918.

BARCELONA TRACTION, LIGHT AND POWER COMPANY, LIMITED

(Incorporated under the Laws of Canada)

To the Bondholders of the Barcelona Traction, Light and Power Company, Limited:

I am directed by the Committee, appointed in 1915 to watch over the interests of the Bondholders of the Company, to advise you that, owing to the delay and complications resulting from the continuance of the European War, affecting both the delivery and the cost of machinery and other supplies, it will be impossible for the Company to resume full payment in cash of the interest on its Bonds on the 1st December next, as was contemplated when the Bondholders met in June, 1915. The Committee, in consultation with the Directors, are, therefore, formulating a plan, the basis of which will be the payment in cash of a portion of the interest commencing with the coupon due 1st December, 1918, with compensating arrangements for deferring payment of the full interest.

In due course the plan will be submitted to the Bondholders for their approval.

In the meantime, the Committee request holders of the Interim Scrip issued during the last three years in satisfaction of the interest coupons, to defer lodging the same for exchange into definitive notes.

Dated June 18th, 1918.

On behalf of the Bondholders' Committee,
T. PORTER,
Secretary.

3 London Wall Buildings, London, E.C. 2.

CANADA CEMENT COMPANY, LIMITED

ORDINARY SHAREHOLDERS

DIVIDEND No. 9

Notice is hereby given that a dividend of 1½% for the three months ending June 30th, 1918, being at the rate of 6% per annum on the paid-up Ordinary Stock of this Company has been declared, and that the same will be paid on the 16th day of July next to Ordinary Shareholders of record at the close of business, June 30th, 1918.

H. L. DOBLE,
Secretary.

Montreal, June 17, 1918.

Guelph, June 4th, 1918.

TORONTO PAPER MANUFACTURING CO., LIMITED

Notice is hereby given that a dividend of three per cent., together with a bonus of two per cent., on the paid-up Capital stock of this Company has been declared for the half-year ending June 30th, 1918, and that the same will be paid on July 2nd, 1918, to shareholders of record at the close of business on June 22nd, 1918. The Company's books will be closed from June 24th to 30th, both days included.

By order of the Board.
A. W. BRIGGS.
Secretary.

June 14th, 1918.

STATEMENTS OF THE

Winnipeg Sinking Fund Trustees

For the Year Ending April 30th, 1918.

The Sinking Fund Trustees submitted their Annual Report to the City Council on June 10th, 1918. The Total Assets now amount to $9,100,139.16, a gain of $957,444.83 over the previous year. The Gross Interest earnings for the year amounted to $516,620.02, while the interest requirements were $318,453.54, leaving a balance of $198,166.48. After deducting $8,825.52 for Expenses and writing off $11,850.47 Premiums on Investments acquired during the year, there remained the sum of $177,490.49 to be transferred to Surplus Income Account. This added to the Surplus carried forward from last year made a total of $249,066.21. From this amount $50,000 was transferred to Investment Reserve Account, which now stands at $250,000, and $114,848.66 to City of Winnipeg Levies Account, relieving the City of providing levies for debt items for which no Assets exist or have been replaced, leaving a balance to be carried forward to next year of $84,217.55. The average rate of Interest earned during the year was 6.123 per cent. With the exception of one Roman Catholic Separate School District in Saskatchewan which is under settlement by the Local Government Board no Investment was in arrears either for Principal or Interest as at April 30th, 1918. The Net Debt of the City has been reduced by over $1,500,000 during the year, and over $6,000,000 during the last four years. During the last two years $169,874 has been Applied from Surplus Income to the credit of By-Laws, and all premiums amounting to $68,808.99 have been written off Investments.

The statements for the year follow:—

Transferred from profits for year	50,000.00
Balance at April 30th, 1918	$250,000.00

Winnipeg, May 25th, 1918.

We have audited the books and accounts of the Sinking Fund of the City of Winnipeg for the year ended April 30th, 1918, and have received all the information and explanations we have required.

We have examined at the depositaries the Securities representing the Investments, all of which were found to be in order. The cash in Bank was verified by a certificate obtained from the Bankers.

The Investments purchased at a premium have been written down to par value and those purchased at a discount are included at cost. Provision has been made for possible depreciation.

All amortization requirements have been complied with.

The foregoing balance sheet is in accordance with the books, and, in our opinion, is properly drawn up so as to present a true and correct view of the condition of the Sinking Fund of the City of Winnipeg as at April 30th, 1918.

MARWICK, MITCHELL, PEAT & CO.,

INDIA'S NEW WAR LOAN

The Indian government is issuing a second war loan at 5½ per cent., with a three-year and a five-year maturity, redeemable at par; a seven-year obligation, redeemable at 103 and a ten-year bond, redeemable at 105. The subscription books will remain open until September 15th, and the proceeds of the loan will be turned over to the British government as part of India's £100,000,000 contribution to the cost of the war.

FOURTH LIBERTY LOAN IN SIGHT

The Fourth Liberty Loan next fall will probably be for at least $6,000,000,000, and is likely to be floated in October.

This was indicated in an announcement by the secretary of the treasury that, in preparation of the fourth loan, about $6,000,000,000 in certificates of indebtedness will be issued within the next four months. They will be offered in blocks of $750,000,000 each every two weeks, beginning June 25th; will bear 4½ per cent. interest, and will have varying maturity periods, none exceeding four months.

SUPPLY FALL WHEAT FOR SEED

Steps are being taken by the agricultural section of the Ontario Resources Committee to have good fall wheat seed for sale to encourage farmers who now have it to hold it, and to advise those who have not a supply to purchase early. The district representatives of the agricultural department were circularized, and instructed to make a systematice survey of the wheat situation in their counties. They were asked to report to the department the number of acres of fall wheat killed during last winter, the number of acres in hand, and also to locate any possible supplies of seed.

GOOD OPENING FOR CANADIAN TIMBER

A report received at Ottawa from J. E. Ray, Canadian trade commissioner, Manchester, England, indicates that the British government is propounding a scheme to erect at least 300,000 houses, under State and municipal rate aid, as soon as conditions are favorable. Mr. Ray said that this prospective demand for building timber, doors, window sashes, etc., should be closely followed by Canadian manufacturers.

There are unmistakable signs that after the war timber merchants and builders will turn to Canada for larger supplies of these structural woods than they imported four or five years ago.

Bank of England rate, 5 per cent.

MAKING RAILROAD HISTORY

Railroad history has been made rapidly the last few days, both in number and importance of the new strokes of policy and in the probable consequences. Four major developments—the "dismissal" of railroad executives, the provision for a billion budget, a wholesale wage raise and a correspondingly wholesale fare and rate increase,—while each representing considerable past investigation and consultation, have been put in actual effect with a speed and decisiveness possible only under the new war regime.

All these sweeping measures stand variously for the rectifying of a great and grave situation. The treatment of railroad heads is intended to obviate an almost impossible dual position, replacing it by undivided allegiance to a single control. The one qualification would seem to lie in need of caution against loss of the best calibre for the authority to be newly delegated,—possibly a loss through salary parsimony.—"Boston News Bureau."

CROP PROSPECTS THROUGHOUT CANADA

Increase in Acreage of Wheat and Oats—Weather has Retarded Growth

The Dominion Bureau of Statistics issued a few days ago the first or preliminary estimate of the areas sown to grain and hay crops this spring, with a report on their condition on May 31, as compiled from the returns of crop correspondents. The returns show very satisfactory increases in the areas sown to wheat and oats, and the condition of these crops on May 31 was generally better than at the same date last year.

Areas Sown to Grain and Hay.

The total area sown to wheat for the whole of Canada for 1918 is estimated at 16,080,800 acres, as compared with 14,755,850 acres, the finally established figure for 1917, representing an increase of 1,324,950 acres, or 9 per cent. The area to be harvested of fall wheat is 338,000 acres, and the area sown to spring wheat is 15,742,800 acres; so that the increase of the latter as compared with 1917 is 1,712,250, or 12 per cent. The area sown to oats is placed at 13,739,000 acres, as compared with 13,313,400 acres last year, an increase of 425,600 acres or 3.2 per cent. The acreage of barley is 2,395,800, as compared with 2,392,200 in 1917, of rye 234,530, as against 211,880, of peas 200,430, as against 198,881, of mixed grains 506,530, as against 497,236, of hay and clover 8,200,300, as against 8,225,034, and of alfalfa 103,800, as against 109,825. The areas sown this year to wheat, oats, barley and rye are the highest on record for Canada. The acreage sown to wheat in the prairie provinces totals 15,196,300 acres, as against 13,619,410 acres last year, to oats 8,767,000 acres, as against 8,559,500 acres, and to barley 1,845,500 acres, as against 1,850,000 acres. To wheat Manitoba has sown 2,618,000, Saskatchewan 9,222,000 and Alberta 3,356,300 acres. Under oats the acreages are for Manitoba 1,500,000, for Saskatchewan 4,602,000 and for Alberta 2,665,000, whilst for barley Manitoba has 715,000 acres, Saskatchewan 663,500 acres and Alberta 467,000 acres. Nearly all the provinces have considerably increased their acreage under spring wheat, Nova Scotia by 11, New Brunswick by 44, Quebec by 24, Ontario by 45, Manitoba by 7, Saskatchewan by 11½, Alberta by 16 and British Columbia by 6 per cent. The acreage under oats is also increased by percentages ranging from 1 per cent. in Saskatchewan to 13 per cent. in British Columbia, Manitoba showing no change.

Condition of Crops on May 31.

Throughout the West the month of May was exceptionally cold, with heavy frosts and consequent retarding of growth. According to the reports of crop correspondents, expressed numerically in percentage of the average yield of the past ten years, the condition of the principal grain crops was on May 31 as follows: Fall wheat 80, as against 85 last year; spring wheat 101, as against 93; all wheat 100.5, as against 92; rye 95, as against 97. For other crops the condition on May 31 this year, expressed in percentage of the decennial average, was: Peas and mixed grains, 103; hay and clover, 101; alfalfa, 97; and pastures, 100.

Ontario reports (June 5) that timely rains with warm weather have favored the growth of all field crops. Prospects are excellent for another good hay crop, and spring grains never gave better promise at the beginning of June. Saskatchewan reports (May 28) that rain and snow were general throughout the province during the week with the exception of some parts of western Saskatchewan. Alberta reports (June 10) that warmer weather has been prevalent during the past week with light local showers. Growth generally is coming along fairly fast.

Recent Weather has been Favorable.

With the advent of weather favorable to the crops the tone of reports of the condition of growing grain in Western Canada is generally optimistic. In the weekly report of the agents along western lines of the Canadian Northern Railway to the executive officers of the company, 109 of the 250 agents reporting declare the wheat is advancing splendidly and that where the favorable conditions have not already overcome the set-back due to adverse weather conditions in early weeks, the recovery will not be long delayed. Only 29 of all the agents reporting to the Canadian Northern from the Western Canada grain belt, indicate delay now from unfavorable weather conditions.

HYDRO-ELECTRIC GUARANTEED BONDS

R. C. Matthews Company, Toronto, are offering for sale $300,000 Hydro-Electric Power Commission 4 per cent. gold debentures, dated August 1st, 1917, and due August 1st, 1957, at 69.33 and interest, yielding 6.05 per cent. The issue is guaranteed by the province of Ontario, and is for further extensions of the Hydro-Electric system.

MONTREAL'S REALTY TAX

The city council decided on June 17th that the additional realty tax for the current year should be 35 cents on each $100 valuation. The recommendation of the city commission for a 40 cent tax was amended to the above amount.

In view of the 35 cent tax, the commissioners must now reduce the supplementary budget by $300,000 to make up the difference between the 40 cent and 35 cent tax.

TORONTO ELECTRIC LIGHT COMPANY

The city of Toronto intends to give notice to the Toronto Electric Light Company of its intention to purchase the property and business of the company in 1919. The original agreement between the company and the city, made on July 31st, 1889, provides that the city may, at the end of thirty years, buy out the company, provided that notice has been given one year previous. If a price is not agreed on, it may be submitted to arbitration. Three arbitrators are to be chosen, one by the city, one by the company, and the third by the two already appointed. If the city does not purchase at the end of thirty years, it may do so after succeeding periods of twenty years on the same conditions.

The Toronto Electric Light Company has a capital stock of 6,000,000, one-half of which is preference stock and the other half common. There are also outstanding $969,500 of first mortgage 5 per cent. bonds, due in 1933.

The board of trade figures for the month of May show an increase in imports of the United Kingdom of £38,257,000 over the same of last year. The principal increases were: Food, £25,000,000; raw cotton, £4,000,000, and oils, £3,000,000. Exports increased £1,529,000. There was an actual increase in cotton textiles of £4,500,000, but decreases in other commodities account for the reduced total increase.

Reports from the southern part of France indicate much bigger crops of grain, fruits and olives this year than at any time since 1914.

Deliveries of steel ships to the shipping board at Washington in the first two weeks of June numbered 16, with a total dead weight tonnage of 89,162.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Barrie, Ont.—June 18—The Fisher Flour Mills were destroyed. Caused by overheated electric motor. Estimated loss, $70,000.

June 18—Sheds and contents of the Lewis Coal Company were damaged. Estimated loss, $3,500.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Saskatoon, Sask.—Fire Chief Heath submits the following report for the month of May to *The Monetary Times*:—

The structures destroyed or damaged were:—

Pullman car 1, Ford car 1, rooming-house 1, hotel 1, business buildings 2, barn 2, stable 1.

Among the causes last month were: Overheated heater 1, carelessnss in handling gasoline 1, lighted cigarette butt thrown away 1, defective chimney 1, unknown 2, children and matches 1, spark from locomotive 1.

The total damage resulting from fire for May was $13,988, and the total insurance carried was $83,900.

St. Catharines, Ont.—June 7—Foundry of Mr. R. Black was damaged. Estimated loss on building, $350; on contents, $35. The insurance carried on the building amounted to $1,200; on contents, $1,200.

Thorold, Ont.—June 7—Pulpwood piles of the Ontario Lumber Company were damaged. Estimated loss, $200,000.

ANNUAL MEETING OF FORESTERS

The annual meeting of the High Court of the Canadian Order of Foresters commenced on Wednesday, th 19th instant. About 700 delegates were present. In addition to the ordinary business of nomination and election of officers, etc., the question of the rates will be dealt with. This question has been discussed for some time, and no agreement has yet been reached. During the year investigations have been made by the committee, and their reports have now been presented. Mr. David Allen was High Chief Ranger during the past year, and Mr. T. W. Gibson is chairman of the rates committee.

A Practical Pointer on Salesmanship

It is of first importance in good salesmanship to select a worth-while article to sell, something about which you can become enthusiastic with a reason—a reason that will last. In Life Insurance Salesmanship, for instance, a discriminating agent would naturally select the policies of the Mutual Life of Canada because—first, the Company is well-established—Second, it has an unblemished record—Third, it has a continental reputation as a dividend payer—Fourth, it is a democratic organization—Fifth, it is a wonderfully successful going concern—and lastly, being the only Canadian Policyholders' Company its contracts find a ready market. Where a company is so favorably known one half of the trouble of making the sale is avoided. If you get the best goods in your line and go to it, success is certain. Last year our agents placed $20,000,000 paid-for business.

NEW INCORPORATIONS

More Than Fifty Companies Incorporated During the Past Two Weeks—Two With $1,000,000 Capital

The two largest companies incorporated during the past week were the Troja Steamship Company, Limited, of Montreal, and the Gray Tractor Company, Limited, of Winnipeg, both with capital stock of $1,000,000.

The following is a partial list of charters granted during the past two weeks in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Keremeos, B.C.—Keremeos Packing Company, Limited, $50,000

Listowel, Ont.—Hay Brothers, Limited, $100,000; F. W. Hay, J. Hay, J. G. Burt.

Brantford, Ont.—Brantford Buildings, Limited, $40,000; F. C. Harp, G. Pickles, F. J. Reid.

Sudbury, Ont.—Caswell Lumber Company, Limited, $40,000; G. Caswell, A. J. Jordan, G. J. Valin.

Hnausa, Man.—Riverton Fish Company, Limited, $25,000; C. C. Robins, E. Solberg, C. Tomasson.

Woodstock, Ont.—Fig-Lax Laboratories, Limited, $50,000; L. Goodyear, B. Goodyear, W. Goodyear.

Sarnia, Ont.—Goodwin and Company, Limited, $40,000; J. F. Goodwin, A. McDonald Lott, J. Garroch.

Balmoral, Man.—Balmoral Trading Company, Limited, $25,000; J. Pulfer, C. H. Stonehouse, J. S. Preston.

Windsor, Ont.—Windsor Mausoleum Company, Limited, $10,000; C. W. Cadwell, H. J. Stewart, F. E. Harvey.

Guelph, Ont.—Guelph Paper Box Company, Limited, $40,000; J. J. Small, A. A. Buchner, W. E. Buckingham.

Quebec, Que.—Laurentian Manufacturing Company, Limited, $10,000; W. Quarrier-Stobo, H. C. Thorn, J. Graham.

Sault Ste. Marie, Ont.—French Bay Lumber Company, Limited, $150,000; J. P. Walsh, C. J. McLaughlin, E. Purvis.

Walkerville, Ont.—Canadian Driver-Harris Company, Limited, $150,000; L. O. Hart, LeRoy Edwards, W. P. Martin.

Medicine Hat, Alta.—Alberta Linseed Oil Company, Limited, $300,000; W. R. Shanks, G. R. Drennan, H. W. Jackson.

Hamilton, Ont.—Neverfail Products, Limited, $50,000; H. A. Burbidge, J. R. Marshall, G. A. Young. Monarch Metal Company, Limited, $250,000; G. A. Young, A. B. Turner, A. H. Johnson.

Vancouver, B.C.—Sentry Manufacturing Company, Limited, $10,000. G. G. Heather and Company, Limited, $10,000. Barons Motors, Limited, $15,000. Quadra Steamship Company, Limited, $100,000. Keats Island Development Company, Limited, $10,000. Canadian Agencies, Limited, $10,000.

Winnipeg, Man.—Phonograph Shop, Limited, $30,000; A. G. Joy, G. A. Axford, J. C. Freeman. West-Woods, Limited, $100,000; W. J. Allen, R. Siderfin, H. A. J. Scott. Gray Tractor Company of Canada, Limited, $1,000,000; J. W. Gray, A. Prugh, E. R. Chapman. Chopin Phonographers, Limited, $50,000; A. M. Shinbane, L. D. Morosnick, M. H. Brotman. H. L. Perry Company, Limited, $25,000; E. J. Bawlf, P. Yates, B. Thompson.

Montreal, Que.—S. H. Ewing and Sons, Limited, $500,000; A. Beaudry, B. McDougall, A. Malo. Ostigny and Fils, Limitée, $100,000; M. M. Charles-Ovide Ostigny, E. Ostigny, P. Ostigny. Pierre Brault, Limitée, $75,000; P. Brault, P. Brault, Jr., O. Brault. Dubuque Realty Company, Limited, $19,000; M. M. Joseph-Emery Phaneuf, R. Poirier, Z. Racette. Mount Bruno Country Club, Inc., $500,000; W. R. L. Shanks, F. G. Bush, G. R. Drennan. Viger Garage, Limitée, $10,000; G. Briere, J. Meunier. International Securities Corporation, $5,000; M. M. Z. Renaud, T. Jodoin. Mount Royal Credit, Limited, $100,000; A. Vallee, R. W. Plimsoll, E. Markgraf. O'Brien Motor Services, Limited, $250,000; R. T. Hencker, H. N. Chauvin, E. Wylie. Hosiers, Limited, $100,000; J. Macnaughton, J. G. Cartwright. Electric Welding and Shipbuilding Company of Canada, Limited, $50,000; J. J. Meagher, H. N. Chauvin, J. E. Coulin. Troja Steamship Company, Limited, $1,000,000; E. F. Surveyor, W. L. Bond.

Toronto, Ont.—Arrow Service, Limited, $40,000; P. Barton, E. A. Ferris, E. Reed. Campbell Grain and Feed Company, Limited, $500,000; E. T. Coatsworth, L. G. McAndless, A. H. McCrimmon. Canada Pulpwood Exporters, Limited, $24,000; A. C. Brown, B. A. Brown, W. G. Kelly. Gelber Brothers, Limited, $200,000; W. H. Ford, L. M. Singer, H. Goldstein. Imperial Clothing Manufacturing Company, Limited, $200,000; W. H. Ford, L. M. Singer, H. Goldstein. Mica Products, Limited, $40,000; W. H. Warrington, N. Petinot, R. Stuart Muir. Middlesex Woollen Company, Limited, $40,000; F. S. Hutner, H. Hutner, H. Hutner. Modern Theatres, Limited, $40,000; J. Singer, A. Singer, L. Singer. Paving and Mastic Company, Limited, $40,000; R. E. Grass, R. Lierberman. Princess Theatre Company, Limited, $50,000; F. J. Hughes, L. J. Phelan, V. Stewart. Regal Ladies' Wear, Limited, $40,000; N. G. Calder, G. A. Willis, W. A. Sadler 'Wilberforce Molybdenite, Limited, $250,000; L. Adams, V. M. Gray, B. M. Gray.

WORLD'S WHEAT PRODUCTION

According to statistics compiled by the International Institute of Agriculture, the world's wheat crop in 1917 was as follows:—

Countries.	1917. Bushels.
North America—	
United States	650,828,000
Canada	233,743,000
Mexico	7,480,000
Total North America	892,051,000
South America—	
Argentina	210,000.000
Chili	14,000,000
Uruguay	18,372,000
Total South America	242,372,000

Brantford	880,238	756,807	+	123,431
Fort William	617,738	640,858	—	23,120
Lethbridge	689,834	791,985	—	102,151
Medicine Hat	581,574	404,296	+	177,278
New Westminster	465,634	297,535	+	168,099
Peterboro	679,547	650,049	+	29,498
Sherbrooke	689,087	560,414	+	128,673
Kitchener	817,868	572,704	+	245,164
Totals	$280,998,182	$249,777,514	+	$30,197,950

The Toronto bank clearings for the current week are $74,780,655, compared with $58,958,448 for the same week in 1917, and $51,909,202 in 1916.

DECREASE IN CANADIAN TRADE

Canada's trade for the months of April and May, 1918, show a considerable decrease as compared with 1917. The figures are as follows:—

	Two months, ending May, 1917.	1918.
Imports:		
Dutiable goods	$101,266,120	$ 92,640,507
Free goods	93,138,068	75,792,515
Total	194,404,188	$168,433,022
Coin and bullion	1,625,851	863,751
Grand total	$196,030,039	$169,296,773
Duty collected	30,958,308	28,824,379
Exports:		
The mine	10,213,082	11,199,519
The fisheries	1,753,842	2,212,888
The forest	7,468,459	10,616,777
Animals and their produce	16,891,499	12,993,504
Agricultural products	83,236,184	54,270,937
Manufactures	93,809,271	57,647,284
Miscellaneous	830,348	1,222,782
Total merchandise	$214,202,685	$150,163,691
Coin and bullion	77,325	....
Grand total exports	$214,280,010	$150,163,691
Total Canadian Trade:		
Merchandise entered for consumption	194,404,188	168,433,022
Merchandise, domestic, exported	214,202,685	150,163,691
Total merchandise for consumption and domestic exported	$408,606,873	$318,596,713
Coin and bullion entered for consumption	1,625,851	863,751
Coin and bullion exported	....	220,540
Merchandise, foreign, exported	5,028,924	3,415,208
Grand total	$415,809,726	$323,096,212

The decrease is greatest in the exports, and this is attributed to the shortage in shipping. The decline in imports is no doubt due to the restrictive regulations, and to decreased buying power.

GAS COMPANY INVESTIGATION

(Continued from page 8)

The results may be summarized thus:

Assuming that the same quantities of supplies and amount of labor will be utilized in 1918 as in 1917, the excess costs for gas coal, gas oil, fuel, labor and taxes:

In 1918, compared with 1915, will be $1,139,849.00.
In 1918, compared with 1916, will be 1,076,766.00.
In 1918, compared with 1917, will be 595,076.00.

These figures are somewhat startling, but they are only in keeping with those exhibited by other similar important public utility corporations.

Some prices charged for gas in other Ontario municipalities are as follows:—Brockville, $1.40; Cobourg, $1.50; Guelph, $1.30; Kingston, $1.50; Kitchener, $1.25; Napanee, $1.50; Oshawa, $1.40; Ottawa, $1.25; Owen Sound, $1.35; Peterborough, $1.50; St. Thomas, $1.20; Waterloo, $1.40; Streetsville, $1.10. In each of these cases there has been one or more increases during the past year. The average price is 27 cents per thousand cubic feet, or 25 per cent. over the prevailing prices a year ago.

An examination was also made into the rates charged in sixty-two representative cities of the United States, and only nine companies were found charging less than the ninety-cent rate of the Consumers' Gas Company.

The report closes with the statement that the investigation has proved:—

"(1) That the cost of new capital to the company has increased about 40 per cent. within the past six years.

"(2) That the cost to the company of gas coal has increased 63 per cent., gas oil 81 per cent., fuel 40 per cent., and labor 42 per cent., within the past three years.

"(3) That the operations of the Company during each of the past three years, ending September 30th, have resulted in deficits.

"(4) That practically the same conditions have been experienced by other concerns which supply gas throughout Ontario, and as a consequence there has been an increase in the price to their consumers of approximately 25 per cent., within the past year and a half.

"(5) That consumers in no municipality in Ontario are being charged as low a net rate for gas at the present time, as those in Toronto. The lowest net rate charged by any municipality is $1.10, and the highest is $1.50, as compared with 90 cents charged by the Consumers' Gas Company.

"In view of the foregoing facts, we are of the opinion that the company is justified in increasing the net rate from 80 cents to 90 cents per 1,000 cubic feet."

Senator Gideon D. Robertson arrived in Toronto on Tuesday the 18th inst., to endeavor to adjust the dispute between the Great North Western Telegraph Company and its local operators. Senator Robertson has been instrumental in settling a number of labor disputes including the recent strike at Winnipeg and the strike which for several weeks tied up the shipyards of the Pacific Coast.

Half Billion Loan For Canada

Victory Loan Record Must be Surpassed—General Opinion Regarding Success of Loan is Optimistic—An All-Canadian Loan for the Canadian Government — Actual Terms Not Yet Announced — Importance of Small Investor is Greater Than Ever — Some Questions Under Discussion

WIDESPREAD attention throughout the Dominion is already directed to the coming war loan. Some questions have arisen which must now be viewed in a light different from the previous loans. It is safe to say, however, that this loan will be opened under more favorable auspices than was the Victory Loan, which had for the most part to break new ground. There were twenty times as many subscribers for the Victory Loan as for any other of the previous Canadian war loans. The total was much greater, and many of the purchasers had never bought a security of any kind before. The educational process is not by any means completed, for 800,000 subscribers in Canada is just about one out of nine in the population. This might easily be doubled.

It seems, moreover, that the small subscriber will be even more important in the coming loan than in the previous one. The large corporations, banks, insurance, trust and industrial concerns will, of course, be able to subscribe for substantial amounts. Probably many of them will surpass their former subscriptions, but there is not the same elasticity in corporation finances as there is, generally speaking, in the finances of the individual.

There is much evidence that not only corporations, but also individuals have been preparing for the coming loan ever since the previous one was closed. It is realized that the Canadian Government must be financed by the Canadian people, and this point cannot be too strongly impressed. It gives a meaning and purpose to the thrift campaign which would not apply otherwise. With few exceptions, Canadian institutions have experienced prosperous years, and in a great many cases have made new levels of profits. Agriculturists have prospered as never before in the history of Canada, and plenty of employment and high wages have fairly well kept pace with the high cost of living in industry. The markets, moreover, as was pointed out to *The Monetary Times* by a prominent Toronto broker, have been extraordinarily clear of provincial, municipal and corporation issues. What few issues have been made have been eagerly purchased within a very short time. There are, moreover, no more issues of size in sight, and there are yet several months to elapse until the books for the loan will be opened.

Considering, therefore, the large number of purchases of municipal and other securities which would ordinarily be made during this period, there is every reason to believe that large sums have been set aside for war investments. The fact that very few of the purchasers by instalment of the Victory Loan could not meet their payments, is also encouraging, as there is much more likelihood of intentional preparation for the next loan.

On account of the exchange situation between Canada and the United States a loan or credit in New York has been considered as an adjustment of trade relations. A small credit or loan might be justified, but there would be no necessity or advantage in resorting to New York for a considerable loan to finance our war requirements. Every dollar raised abroad requires the repayment in some form or other of, say, two dollars in principal and interest, and in the meantime our own income would be to a certain degree wasted, or savings invested in forms which would very probably not yield the 6 per cent. or more, which we would require to pay on the debt abroad. There are, in fact, very few new enterprises which could promise a return of 6 per cent. on the investment, and a fair degree of security.

Sir Thomas White was recently in Washington and New York on financial business, and upon his return stated that a large issue of Canadian Government bonds could only be made upon a 6¼ or 6½ per cent. basis, with flotation charges of 3 per cent. This is, of course, on account of the heavy demand for funds in New York, and more especially for subscriptions for Liberty Loan issues. There may, of course, seem to be much disparity between the yield upon the Liberty Loan bonds and an interest return of 6 per cent. on Canadian Government bonds, but this difference is to a large extent cancelled by the substantial income tax to which issues other than United States government issues are subject. The finance minister also stated that the market for the higher grade of corporation securities was practically upon a 7 per cent. basis. Canadian bonds can be sold in United States, and arrangements have been made with the capital issues committee for this purpose. Considering the state of the market, however, it is not probable that very many sales will be made.

It is generally supposed that the interest rate will be a little higher than the rate on the Victory Loan. The latter bonds are selling upon the market at 99½ per cent., which is slightly above the issue price, and the holder who desires to sell his victory bond could secure practically his cost price. The other Canadian Government issues are also selling around the same level, namely, a 5⅝ per cent. basis. Particular strength has been shown in the transactions on the stock market during the past two or three days, which is to some extent accounted for by the Austrian reverse in Italy, and partly by the scarcity of high-grade investments. In fact, two or three successes such as the recent Italian achievement, might permit of the loan being offered upon a much less favorable basis. In any case, it is clear that on grounds of economy and expediency the loan must be raised in Canada. The actual price will be one of the last points to be settled.

Tax Exempt versus Taxable Bonds.

Another question which has come up for more discussion in connection with this issue than with any of the previous ones, is that of whether the bonds should be exempt from income tax or subject to it. General opinion is that they should be exempt just as were the previous loans. It is thought that two kinds of bonds with two price levels would not be wise. Moreover, as one leading bond dealer in Toronto pointed out to *The Monetary Times*, two price levels would mean two classes of bond holders. The taxable bonds selling on a higher interest basis would appeal to the man of small means and income who would pay no income tax or whose tax would be negligible. On the other hand, the man of large income would prefer the tax-free bonds. The result would be, therefore, that very little revenue would accrue to the Dominion Government as the taxable bonds would gradually find their way into the hands of those not subject to the taxation.

Definitive Bonds to be Prepared Beforehand.

One of the weak points of the Victory Loan is generally admitted to be the procedure of exchange that had to be gone through. In fact, all of the temporary certificates have not yet been exchanged for the definitive bonds and it has been necessary to make interest payments upon presentation of the interim certificates.

To have the definitive bonds ready for delivery upon completion of payment in full would mean an enormous saving of time and expense not only on the part of the public and of the finance department, but also of the banks which are at present very short of help.

It has been practically settled that the total issue will be for $250,000,000, with an objective of $500,000,000. No doubt total subscriptions up to the latter sum will be accepted, as in the case of the Victory Loan. A similar organization will be used, but the system of remuneration is receiving considerable attention and criticism. It is thought by many that those who devote weeks and months of effort in the planning and organizing of the campaign do not fare as well as those who merely canvass during the actual period of selling and pocket the commissions.

Plans Being Discussed at Ottawa.

On Tuesday, the 25th instant, the Dominion Executive which had charge of the Victory Loan met at Ottawa in conference with the finance minister regarding these and other questions relative to the loan. Many of the points will unquestionably be settled although official announcement of the actual terms, etc., will, it is understood, not be made for some time yet. It will probably be November before the loan is launched, so that full preparation can be made. The Victory Loan funds are almost exhausted, and in the meantime the government is being financed by the banks, which will have to be reimbursed from the proceeds of the war loan.

Two gold shipments of $5,000,000 each were made recently to the Federal Reserve Bank of New York. These came from the Bank of England's reserve at Ottawa. The total for the present movement is $25,000,000.

CROP PROSPECTS IN SASKATCHEWAN

Increased Acreage Should More Than Compensate for Damage

The Department of Agriculture, of Regina, has issued the following report on crop conditions in the province:—

Saskatchewan has approximately 9,222,000 acres sown to wheat this year, according to the preliminary estimate made by the provincial department of agriculture. The estimate made by the department is one of the acreage of all grain crops for the present season in the province. In issuing this statement, it is a matter for congratulation to the farmers on their endeavor to materially increase the acreage sown to wheat and other grains.

The increase as shown by the preliminary estimate will add nearly a million acres to the wheat crop and some eighty thousand acres to the oat crop. Taking as a basis the average yield of wheat for the past ten years at 17½ bushels, Saskatchewan, with seasonable weather and a good harvest, should add to the world's depleted wheat stocks some one hundred and sixty odd million bushels of wheat.

The details of the preliminary estimate of the grain crops are as follows:—

	1917. Acres.	1918. Acres.
Wheat	8,273,253	9,222,000
Oats	4,521,642	4,602,000
Barley	669,927	663,500
Rye	53,250	70,000
Peas	2,605	2,500
Mixed grains	39,500	40,000
Hay, clover	260,275	260,300
Alfalfa	9,500	8,700

No estimate has been made of the acreage for flax.

Damage by Winds and Cutworms.

While the terrific winds of last Monday did a great deal of damage in some sections of the province, this damage would not appear to have been general, judging from the reports received during the week-end by the department.

Local showers are reported from some quarters, while other sections report no damage from either wind or lack of rain. Cutworms are reported in the Shellbrook district.

YORK COUNTY LOAN AND SAVINGS COMPANY

The liquidation of the York County Loan and Savings Company was completed on Monday, the 24th instant, in Toronto. The total receipts were $2,371,056, and disbursements other than dividends amounted to $690,470.

TAXING INCOMES

It is clear that incomes will come in for a heavy burden in the new financing for war purposes, and thus the question of any changes in the tax laws is of interest. If the laws were rewritten in toto, as they should be, our legislators might well rectify the discrimination against earned incomes in favor of those that are not.

The present law opens one door to unearned incomes, through which they pass upon payment of normal and super-taxes. But earned incomes above a certain figure are headed through another doorway, where after payment of the same taxes as non-working incomes, a flat penalty is laid upon them, as if in punishment for being the fruits of ability and usefulness.

Also, when disposed to add to excess profits and other taxes on industry and production, will it not be advisable first to consider the incomes that neither work nor fight? A case in point is revealed in a proceeding in the Surrogate's court. A ward, a young schoolgirl boarder, with a yearly allowance of $12,000, files a petition to have it increased to $20,000. Limousines, party dresses, dancing robes, theatres and other "necessities" are mentioned as reasons for this extra allowance. Doubtless all this may be proper in her station in normal times, but not now, when we are wondering if the net liquid income of the nation is sufficient to meet the war's demands.—"Wall Street Journal."

CITY OF CALGARY FINANCES

System Has Been Thoroughly Revised—Provision for Arrears of Taxes

In presenting the financial statements of the city of Calgary, Macintosh and Hyde, chartered accountants, comment as follows on the condition of the city's affairs:—

"After commencing the year with an adverse balance of $12,208.51 there is, at December 31st, 1917, a debit balance of only $294.42, or a gain of $11,914.09. This is despite the fact that the annual estimate allowed for the contribution to taxation by the light department of $15,000 which, not being earned, has not been taken to the credit of general revenue; also, there has been reserved against arrears of taxes the sum of $40,000. This latter amount is available because of an underestimate of the sum accruing during 1917 for penalties on arrears.

"We welcome this reserve as a commencement towards providing for the doubtful taxes which have been separated from arrears for some time past, which amount to $81,931.81, and concerning which we have asked the city commissioners to make provision in the 1918 levy. It is also probable that the taxes on certain outlying districts may prove to be irrecoverable, and the setting up of an adequate reserve should be a matter for the immediate attention of the council.

Utilities Revenue.

"The 1917 results of the operations of the city's utilities are as follows:—

	Inc. or dec.
Electric light department	— $ 61
Street railway department	+ 21,492
Waterworks department	— 16,182
Market and scales department	— 7,437
Paving plant department	— 13,138

"The satisfactory result shown by the street railway is almost entirely accounted for by the large amount of bank interest earned on its depreciation fund and on the substantial balance owed to the street railway by the general fund. There is also a remarkable rise in the value of the inventory of material, which was certified to by the assistant superintendent in the absence of the superintendent.

"Some three years ago it was decided by the city to reduce the charge of street railway revenue for depreciation until such time as traffic conditions became normal. We have looked into the comparative figures of car earnings, which are:—

1913	$755,459.79
1914	690,197.71
1917	556,374.33

"From which it is evident the time has not yet arrived for a return of previous rates of depreciation, under the ruling then made.

Sinking Fund.

"Last year we called attention to the shortage arising from the non-payment of taxes and to the consequent loss of interest earning power. We have now to report that the substantial surplus earnings had practically disappeared at December 31st last, as shown by the following figures:—

Sinking fund reserve	$3,649,439.72
Present value of sinking fund	3,649,242.16
Surplus earnings at December 31st, 1917... $	197.56

"The actual shortage in the fund is:—

Present value of sinking fund	3,649,242.16
Sinking fund	2,241,363.38
Shortage at December 31st, 1917	$1,407,878.78

"Prior to 1917 the utilities contributions had been kept fairly well up to date but, during the past year, only small contributions by the electric light and street railway department have been made, and any balance of sinking fund earned by utilities have become factors in the general financing. The shortage applies to the various departments to the following extent:—

General, present value	$2,395,530.39	
Sinking fund	1,224,212.85	
		$1,171,317.54
Electric light, present value	$ 279,017.36	
Sinking fund	239,563.49	
		39,453.87
Street railway, present value	$ 302,236.51	
Sinking fund	258,910.86	
		43,325.65
Waterworks, present value	$ 631,129.59	
Sinking fund	508,255.31	
		122,874.28
Market, present value	$ 14,654.76	
Sinking fund	10,420.87	
		4,233.89
Paving plant, present value	$ 26,673.55	
Sinking fund	....	
		26,673.55
		$1,407,878.78

"The debenture debt of the city is now $20,477,518, in addition to which there are $2,000,000 of treasury bills outstanding."

SILK IMPORTS INCREASE

In *The Monetary Times* of June 7th there was an error in the article "Luxuries in War Time." Figures were given to show the decrease in imports of silk into Canada, whereas the opposite has been the case. Silk is, in fact, one of the few "luxuries," the import of which is now greater than in 1913, and this is undoubtedly due to a large extent to the scarcity of woolens and cottons, and the comparative plenty of silk supplies. From the year 1913 the imports of silk and manufactures of silk was $9,723,797, while for 1917 the figure was $13,854,906.

NEXT BEST CUSTOMER

Next to Great Britain, Canada is our best customer. We have not been exporting as much to Canada as to France, but the trade has been nearer to a cash basis, with imports of raw materials gathering in indispensable importance each succeeding year.

In ten months ending with April, 1918, our exports to Canada were valued at $616,422,000, exceeded only by war trade with France and England. These exports were three-fifths of all our sales in North America, a group taking in Cuba. Imports amounted to $356,430,000, or $120,000,000 greater than from British East Indies, which is next in quantity of imports. Japan sold us $228,026,000 of goods. In considering future trade conditions, we can hardly be indifferent to the fact that nearly half our raw imports from North America already come from Canada.

A well-posted western banker estimates that Canada every year spends with us $1,000,000,000 for manufactured goods, raw materials, interest and travel. At the same time we lack much in understanding of what this means, has meant for years past, and must signify hereafter.

In Canada's fiscal year just ended, trade rose to $2,502,000,000 from $1,050,000,000 in the last pre-war year. Canada has at last reached a high plane in the marketplace of the world. It has felt the stimulus of a trade balance of $500,000,000 net in its favor against the world.

It has been troubled with the wastage of an adverse exchange rate with us, as much as 2 per cent at one time. Circumstances have mitigated this evil and the rate now stands a little over 1 per cent. Sales to us have gained steadily for some time. They were $7,000,000 more this April than last and for ten months increased $120,000,000. Gold shipments in the current movement from Ottawa run $4,000,000, with another $1,000,00, at least, to come.

Then, perhaps, a British-Canadian credit will be arranged here during the summer to cover British purchases of Canadian wheat. Meanwhile substantial orders for war material and supplies have been executed by Canada for the United States, easing the cost of funds, arousing a new feeling of fellowship and quickening the understanding of what is so obviously true, that there is an identity of interest now between Great Britain, Canada and the United States which, to all appearances, will be permanent.—"Wall Street Journal."

PERSONAL NOTES

Mr. J. Cooper Mason, formerly acting manager of the Home Bank of Canada, has been made general manager.

Mr. Charles Heath, of Portage La Prairie, has been appointed superintendent of insurance for Manitoba, following the resignation of Mr. A. E. Ham.

Mr. George H. Thomson, of Quebec, vice-president of the Union Bank, was recently elected director of the Bell Telephone Company, replacing the late Mr. Sise.

Mr. J. C. O'Donnell, superintendent of the western lines of the Canadian Northern Railway, becomes acting general superintendent of the western divisions of that company temporarily.

Mr. Fred. A. Burgess, manager of the insurance department of Waghorne, Gwynne and Company, Vancouver, has been appointed president of the Mainland Board of Fire Underwriters, Vancouver, B.C.

Mr. B. H. Penny, formerly connected with the British Colonial Fire Insurance Company, at Winnipeg, has become associated with the General Fire Insurance Company of Paris, with headquarters at Winnipeg.

Mr. W. LeRoy Shaw has become manager of the life and accident deparment of the Travellers Insurance Company, of Hartford, with headquarters in Montreal. He will have charge of Montreal and the province of Quebec.

Mr. R. A. Stinson, vice-president of the Canadian Crocker-Wheeler Company, was appointed to the public utilities commission of St. Catharines, succeeding Mr. H. McAvoy, whose resignation was accepted recently.

Mr. James Simpson, the well-known Canadian labor leader, will visit New Zealand for six months on a lecture tour in the interests of temperance. He will also study industrial legislation and labor conditions in New Zealand.

Mr. L. G. Huntley, lecturer at the University at Pittsburg, has become president of the Oil and Transport Corporation. Mr. Huntley is well known in Canada, having been employed by the Canadian government. He is also the author of several works on the oil industry.

Mr. S. Casey Wood, of the firm of Rowell, Reid, Wood and Wright, Toronto, has been elected a director of the Home Bank of Canada to fill the vacancy created by the retirement of Hon. T. A. Crerar, who accepted the portfolio of minister of agriculture in the Dominion Cabinet.

Mr. Wm. J. Cameron, formerly deputy commissioner and actuary of the North Carolina Insurance Department, has become assistant actuary of the Home Life Insurance Company of America. Mr. Cameron is a graduate of Toronto University and a Fellow of the Actuarial Society of America.

Mr. Charles Bauckham, who has for some years been secretary-treasurer of the Standard Reliance Mortgage Corporation, has been appointed manager of the Sterling Trusts Corporation. Mr. Herbert Waddington, the former manager of the Trusts Corporation, has been elected vice-president.

Mr. E. I. Omeltchenko, foreign trade agent of the Central War Industrial Committee of Russia, was in Toronto on Monday. He was also in Ottawa recently. The object of his trip here was to discuss matters of trade and industry with the Canadian government and the Manufacturers' Association.

Mr. Frederick Lamplough, for several years trainmaster for the Ottawa division of the Grand Trunk Railway has been made president, succeeding Mr. L. J. Coleman, who was recently appointed superintendent of the New England lines of the Grand Trunk Railway under the United States railway administration.

Mr. E. Yamada, an importer and exporter of Tokyo, is in Canada on business. In crossing the Pacific he was accompanied by Mr. Tang Hua Lung, late minister of home affairs in the Chinese government, and by Mr. Ho Te Hui, secretary of the National Council of the Chinese Republic. Both of the latter are here for the transaction of official business at Ottawa and Washington.

Dr. F. Miyaoka, of Japan, one of the world's authorities on international law, will visit Toronto shortly, when he will speak at the Empire Club. He recently arrived at Victoria, B.C. Dr. Miyaoka was formerly chief law officer in the Japanese foreign office. He represented the government of Tokyo at the International Tribunal at The Hague, and from 1905 to 1908 was chancellor of the Japanese embassy at Washington.

Mr. Harry T. Ramsdell, president of the Manufacturers and Traders National Bank of Buffalo, and Mr. George H. Prince, chairman of the Merchants National Bank of St. Paul, have been elected to the directorate of the American Foreign Banking Corporation. The directorate now consists of twenty-three and is representative of eighteen different banks in as many important cities of the United States and Canada.

Mr. F. W. Ashe, manager-in-chief of the London, England, office of the Union Bank of Canada, has been transferred to Toronto as assistant manager. His place in London will be taken by Mr. John Geddes, manager of the Vancouver branch of the bank. Mr. George S. Harrison will become manager of the Vancouver bank. Mr. J. W. Hamilton, who recently was moved from Toronto to Winnipeg, is assistant general manager there.

Dr. Thomas Douglas, chairman of the board of directors, of the Phelphs Dodge Corporation, died at his home in New York on Tuesday, the 25th inst. He had been president of the corporation for many years until 1917, when he resigned on account of ill-health. Dr. Douglas was a Canadian and was born in Quebec in 1837. He was educated in Canada and in Europe, and in 1875 went to Phoenixville, Pa., to take charge of the metallurgical operations of the Chemical Copper Company. He was also well known as a philanthropist, contributing to the support of a number of hospitals.

Mr. J. H. Kerr, secretary of the Canadian Westinghouse Company, of Hamilton, died on Monday, the 24th inst. Mr. Kerr was a native of Pittsburg, and had been engaged with the Westinghouse enterprise for many years. He began with the parent company and also assisted in the organization of the English Linotype Company and the French Westinghouse Company. In 1901, when the British Westinghouse was organized, he went to Manchester to organize the factory system. In 1903, on the formation of the Canadian company, he came to Hamilton and for the last 15 years served as secretary.

CHAIRMAN WAR LOAN COMMITTEE

Mr. E. R. Wood, of Toronto, has been appointed chairman of the Dominion executive in charge of the coming war loan. Mr. Wood is president of the Central Canada Loan and Savings Company, of the Dominion Securities Corporation, Limited, vice-president National Trust Company, Limited and of the Brazilian Traction, Light and Power Company, Limited. He is also director of many other enterprises. He was born in Peterborough, Ontario, in 1866. Mr. Wood is chairman of the Board of Governors of Grace Hospital, Toronto, and Regent of Victoria University. In the last loan he acted as chairman of the committee in charge of special subscriptions.

E. R. WOOD.

TAXATION AND WAR FINANCE

A new scale of war taxation was forecasted in recent announcements of the President of the United States. On May 27th, President Wilson appeared at a joint session of the two houses of Congress and delivered a special message on revenue taxation, urging serious consideration to the importance of immediate changes in the existing federal revenue laws. Secretary McAdoo, on June 5th, in a letter to Chairman Kitchin of the Ways and Means Committee, indicated how drastic the increases in taxation must be.

It is first proposed that one-third of the cash expenditures to be made during the fiscal year ending June 30th, 1919, be provided by taxation. According to his estimates, this would involve raising $8,000,000,000 through taxation. The existing laws are expected to produce about $4,000,000,000.

Second, that a real war profits tax at a high rate be levied upon all war profits. This tax should be superimposed upon the existing profits tax in such a way that the taxpayer should be required to pay whichever tax is the greater. The existing excess profits tax should be amended in certain important particulars, so as to improve inequalities.

Third, that there should be a substantial increase in the amount of normal income tax upon so-called unearned incomes. Under existing law, earned incomes above certain exemptions are taxed 4 per cent. as an income tax and 8 per cent. as an excess profits tax, making a total of 12 per cent., while unearned incomes derived from securities, etc., are taxed only 4 per cent. The 8 per cent. should be recognized as an income tax, and the rate of 12 per cent. should be retained in respect to earned incomes, while a higher rate than 12 per cent. should be imposed on unearned incomes.

Fourth, that heavy taxation be imposed upon all luxuries.

The committee on ways and means, which will have charge of the framing of this, the most stupendous tax-levying measure ever formulated by any nation, has already commenced its deliberations. Public hearings are being held, and in due course a bill will be submitted for the early consideration of Congress.

These reforms in the public finances are thoroughly in accord with best current thought on the subject. Benefiting by the experience of the other belligerent nations, the United States government is endeavoring to pay an unusually large proportion of the cost of the war out of current revenue. Last year Canada paid only one-tenth out of revenue. England has also been pursuing a similar policy, only in a lesser degree. The other nations are paying practically all of the cost out of funds raised by loan.

While it is generally admitted that no matter how the money is raised, it must come out of present income, there is an important difference between confiscating this income in the form of taxation and borrowing it at an advantageous rate of interest. The latter method necessitates the imposition of extra taxation to provide for the interest at least, and securities of corporations subject to this taxation are correspondingly depreciated in value. Those who have saved in the past, and purchased securities with their savings, therefore, stand to lose more in the long run than in the case of the former method, which would absorb a larger portion of their income so long as the war lasted, but would not reduce their capital worth in so great a degree.

The discrimination against unearned incomes is also a reform which has been much recommended in many quarters. It is essential, of course, to exempt a minimum in this case, just as in the case of earned incomes, as many individuals rely entirely on revenue from investments which represent the accumulations of years of labor. Heavy taxation of luxuries is an accepted part of modern finance, particularly war finance.

THE FUEL SITUATION IN THE WEST

Although some United States coal is now assured for Western Canada, the fact remains that local supplies will be increasingly relied upon. Without doubt, the mines in operation in Alberta and British Columbia can meet all requirements, for domestic and steam coal, of the whole country to the head of the lakes; but the question remains, will they? It will not soon be forgotten that the West, outside of Alberta, was in serious danger of a coal famine last winter, owing to labor troubles at the mines during the summer of 1917, and the car shortage during the winter months. Manitoba certainly needed all the anthracite in hand during the extreme and long winter of 1917.

Nevertheless, Alberta alone could meet the entire demands of the West were its mines adequately operated and the danger of a car shortage overcome. Saskatchewan has immense deposits of lignite; and the recent Dominion grant of $400,000 for carrying on experiments in briquetting this coal, may make it largely self-dependent in the near future. It is interesting to know, in this connection, that Professor McLaurin, of the University of Saskatchewan, has for some time been engaged on the problem of furnishing light, heat and power to farmers in that province through the utilization of straw which is now largely wasted. While this work is still in the experimental stage sufficient is known of probable results to raise high hopes that ultimate success will be achieved. This will mean even more to the prairie provinces than the hydro-electric enterprise to Ontario.

A few weeks since the Edmonton "Bulletin" issued a special supplement covering the coal problem in Alberta, in particular, and in the prairie provinces in general. One feature of this supplement is the material and data furnished on the coal resources of Alberta, so far as these have been developed, and their relation to the economic life of the West. The "Bulletin" takes umbrage, and with a certain amount of justice, at a recent statement of the Commission of Conservation on the western fuel problem; and particularly at the commission's observation that "it is inconceivable what would happen if the importation of hard and soft coal from the United States were prohibited." In 1916, 533,000 tons of anthracite and 2,376,000 tons of bituminous coal were imported from the United States into the Canadian West. Especially during the stress of war there would be no hardship either with respect to prices or supplies, through the cutting off of these imports, provided Alberta and British Columbia grappled whole-heartedly with the problem. In a word, Will Alberta mine-owners guarantee to supply the fuel needs of Manitoba and Saskatchewan under these conditions?

However that may be, a distinct service has been performed in impressing the situation on the public. Naturally enough, Canadians east of the lakes know little of western resources. Westerners hold the advantage, so many of them having come from the older Canadian provinces. One rooted belief in the East is that the prairies are devoid of fuel supplies, both of coal and wood. The truth is, the prairies have both—of coal especially there are, in Alberta, inexhaustible supplies. The lignite and sub-bituminous areas of that province are sufficient to fill the requirements of the West for decades and generations to come.

Alberta coal has been found admirably adapted for all domestic purposes—for cookstoves, fireplaces and raising steam, although Crow's Nest coal is better for steam uses. Many westerners who have used both anthracite and Alberta coal for domestic purposes prefer the latter, as it holds the fire longer and gives off less gas. It is greater in bulk and produces more ashes than anthracite; but on the other hand, there is less of cinders and clinkers. Of course, furnaces built to burn anthracite will not give satisfactory results in burning Alberta coal; but that is the fault of the furnace, not the coal. And just here it may be mentioned that valuable experimental work is being carried on to perfect a furnace that will give good results in burning the lower grades of bituminous coal and lignite.

Alberta mines have splendid railroad connections with both Saskatchewan and Manitoba. Anthracite is normally carried from Fort William as far west as Moose Jaw; and the transportation problem in distributing Alberta coal throughout the prairie provinces involves no greater difficulties. The Edmonton "Bulletin" argues that imports of coal from the United States should be permanently cut off; as it is unfair to expect the Albertan mines to rise to the demands of emergencies, and meet them without friction and loss of time. That is a big question which must be decided, in the future, on its merits. What Moose Jaw, Regina, Brandon, Winnipeg and other western cities—not to mention the hundreds of thousands of consumers on the farms—want to know here and now is simply this: Will the Alberta mine-owners deliver the goods?

POSITION OF BANKS IN ENGLAND

Among the oldest and strongest of the great banks of the world must be numbered Lloyds Bank, Limited, of England, which has completed its 60th year of business. Since its commencement the bank has grown until at present it occupies a position among the leading financial institutions of the world. Since 1865 no less than 48 other banking corporations have been acquired, some of them joint stock banks and some of them private banks. In 1884, entrance into London business was obtained by the acquisition of the businesses of Messrs. Barnetts, Hoares & Company, who had been established about 1677 and Bosanquet Salt & Company, who had been established in 1796. Following this year, rapid expansion characterized the bank's activities. In 1865 the number of offices was 14, by 1880 it had increased to 45, and by 1884 to 53. Within sixteen years from that date the number mounted up to no less than 312 and in 1903 to 411, while at present the number is over 600. Correspondents are maintained throughout the world. The Canadian agents and correspondents are the Imperial Bank of Canada, the Canadian Bank of Commerce, the Bank of British North America, the Bank of Montreal, the Dominion Express Company and the Royal Bank of Canada. An ordinary banking business, as we know it, is transacted. The bank and its branches also executes purchases and sales of stocks and bonds, and is prepared to act as executor and trustee of wills, etc.

The report presented at the 60th ordinary general meeting, held in Birmingham, on the 5th of February, indicates the sound position in which banking is at present in England. The profits for the year, after payment of salaries, pensions, contributions to the provident and insurance fund, and making full provision for rebate, income tax, bad debts, contingencies, etc., was £1,463,125. The sum of £107,204 was brought forward from the previous year, making a total of £1,570,330. Dividends at the rate of 18⅛ per cent. less income tax

were paid. £400,000 was transferred to reserve, £100,000 to the bank premises account and £100,000 to the staff bonuses account. This left a balance carried forward of £289,464. The total assets are now close to $1,000,000,000, of which over $150,000,000 are invested in British Government securities. The capital stock is £5,008,672; and the profit and loss account has a balance of £629,897. A reserve of £4,000,000 has also been accumulated.

During the year, arrangements were made under which the National Provincial Bank of England, Limited, has become joint proprietor, with Lloyds Bank, of Lloyds Bank of France, Limited.

COBALT ORE SHIPMENTS

The following are the shipments of ore, in pounds, from Cobalt Station for the week ended June 21, 1918:—

Aladdin Cobalt, 65,500; Kerr Lake, 59,658; Hudson Bay, 65,473; Coniagas, 176,000; Nipissing, 152,565; Mining Corporation, 130,818; total, 650,014.

The total shipments since January 1st, now amount to 13,806,187.8 pounds, or 6,903.1 tons.

FUEL SAVING SUGGESTED

At the afternoon session on June 25th, of the annual meeting of the Canadian Association of Stationary Engineers, at London, Ont., discussion took place regarding the fuel situation and conservation of electrical energy. An effort will be made to secure closer co-operation between the Manufacturers' Association and the Canadian Association of Stationary Engineers with a view to saving fuel. A resolution was passed urging that manufacturers who have electrical generating plants, and who have some power to spare, offer their surplus energy to the central stations, where the proper connections can be readily made.

BANK CLEARINGS

The following are the bank clearings for the weeks ended June 21st, 1917, and June 20th, 1918, respectively, with changes:—

	Week ended June 20, '18.	Week ended June 21, '17.	Changes.
Montreal	$ 99,955,573	$ 92,632,110	+ $ 7,323,463
Toronto	74,780,655	58,958,448	+ 15,822,207
Winnipeg	38,981,969	48,249,350	— 9,267,381
Vancouver	10,720,809	7,825,825	+ 2,894,984
Ottawa	8,316,184	6,562,212	+ 1,753,972
Calgary	5,502,463	6,332,209	— 829,746
Hamilton	5,250,423	6,041,949	— 791,526
Quebec	4,359,993	4,280,504	+ 79,489

Sherbrooke	756,512	733,812	+ 22,700
Kitchener	635,717	592,943	+ 42,774
Totals	$275,439,851	$254,181,856	+ $19,982,186

The Toronto bank clearings for the current week are $75,376,722, compared with $59,644,143 for the same week in 1917, and $56,320,154 in 1916.

SASKATCHEWAN FOOD BOARD EXECUTIVE RESIGNS

Hon. G. W. Brown, L. E. Mutton, G. A. Mantle, F. H. Auld and W. A. Wilson, the executive of the Saskatchewan Food Control Committee, have resigned in a body, and have asked to be relieved of their work. In resigning the executive expressed their view that they could no longer carry on the work because of the conditions created in Saskatchewan by certain of the regulations of the Canada Food Board.

NEW OCEAN TRANSPORTATION COMPANY

Cumulative preference shares in the British Colonies Transportation Company, Limited, are at present being offered on the market. This company was formed recently to acquire and operate a fleet of vessels on the Atlantic Ocean to trade between Canadian and American ports. The company has contracted for three new ships, two of which should be delivered in August, and the other in the following month. They are worth over $450,000 and are built to Lloyd's highest classification, having a rating for 13 years. The British Colonies Transportation Company, whose head office is in St. John, N.B., has a capitalization of $250,000 8 per cent. cumulative preference stock, and $500,000 of common stock. The par value of the shares is $100 each. The amounts being issued at present are $230,000 and $400,000, respectively, and the preference stock, which is redeemable at 110 is being offered at par with a bonus of 30 per cent. in the common stock. Goldman and Company, Royal Bank Building, Toronto, who are handling the issues, report that practically all of it has been placed.

HOME BANK'S ANNUAL REPORT

One of the most satisfactory statements so far received was presented at the annual meeting of the Home Bank of Canada held on Tuesday, the 25th inst. The profits for the year ending May 31st, 1918, were $228,963. When the balance at the credit of profit and loss was added to this, the total available was $369,201. Dividends at the rate of 5 per cent. per annum absorbed $97,362. A reserve for depreciation of securities and for contingencies to the amount of $90,000 was set aside; $19,316 was required for the government war tax on note circulation, $10,000 was written off the bank premises account and $2,000 was donated to the patriotic fund. The total assets of the bank are now $23,675,733.68.

In addressing the shareholders, Mr. J. C. Mason, the acting general manager, spoke as follows: "The 13th annual report of the bank shows it to be in a strong liquid position. Our actual cash position is the strongest we have ever occupied, and our liquid assets represent 52.10 per cent. of our total liabilities to the public. Notwithstanding the heavy withdrawals for investment in government and attractive securities, a very substantial increase is shown in the deposits. Our deposits by the public, exclusive of deposits and balances due to the Dominion government, amount to $15,680,000, an increase of over $6,000,000, or 64.12 per cent. in the past three years. The net earnings for the year were larger than last year, being about 10.18 per cent. of the paid-up capital and rest.

"The staff situation, due to the large number of enlistments, is a serious one, but all are working together, early and late, giving faithful war service. Since 1914 the volume of business has increased at least 50 per cent."

Mr. Mason stated that at the outbreak of the war the bank employed 254 men and 15 girls, whereas now the numbers were 165 and 102 respectively.

The head office of the Stuyvesant Fire Insurance Company has been moved to No. 2 Court Street, Toronto, and Mr. H. Begg, of Messrs. Shaw and Begg, has been appointed branch manager for Canada.

Winnipeg will have to raise $606,173 this year as its share of the first levy of $764,178 for Greater Winnipeg Water District. The Winnipeg rate is 3.68 mills on an "equalized" land assesment of $164,836,000. The total assessment for all municipalities is $207,836,000—that of St. Boniface being $14,401,000 and its levy $52,950, or a rate of 4.42 mills.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Laurentide Company, Limited.—A regular quarterly dividend of 2½ per cent. has been declared, payable July 10th, to holders of record June 25th.

P. Lyall & Sons Construction Company.—A regular quarterly dividend of 2 per cent. has been declared, payable July 10th to holders of record June 30th.

West Kootenay Power & Light Company.—Quarterly dividends of 2 per cent. have been declared on the common stock and 1¾ per cent. on the preferred, both payable July 2nd to holders of record June 26th.

Pacific-Burt Company, Limited.—Profits of $101,551 were earned during the fiscal year ended 31st March, by the Pacific-Burt Company, Limited. This is more than for the year 1916, but less than for the year 1917. Dividends were paid on the preferred stock at the rate of 7 per cent., and on the common stock at the rate of 2 per cent.

North American Pulp Company.—The annual statement of the company and its subsidiaries for 1917, shows the total income to have been $1,318,740, an increase of $510,479 over the previous year. The surplus was $105,164, compared with a deficit of $309,360 for 1916. The net available for bond interest, etc., was $1,061,400, an increase of $531,278.

Atlantic Sugar Refineries, Limited.—Very satisfactory profits for the year ending 30th April, 1918, are shown in the annual reports of the Atlantic Sugar Refineries, Limited. Profits for the year amounted to $462,676, compared with $304,423 in 1917. After deducting interest, depreciation, etc., the balance of $246,782 is equal to almost 10 per cent. on the preferred stock. The surplus carried forward is $323,439.

Southern Canada Power Company.—Gross earnings of the company for the month of May aggregated $40,612, an increase of $4,784, leaving net, after operating expenses and purchased power, of $18,222, an increase of $2,311. For the eight months ending with May, the gross earnings of the company amounted to $313,865, an increase of $56,798, but an increase of $37,450 in operating expenses reduced the net increase to $19,348.

Ticonderoga Paper Company.—The directors of the company declared two quarterly dividends of 10 per cent. each on June 19th, putting the shares on a 40 per cent. basis, and, in addition, declared a bonus of 120 per cent. Both are payable June 29th to stock of record June 27th. The two additional quarterly payments of 10 per cent. will be paid September 30th and December 31st. The Ticonderoga Company is controlled by the Riordon Pulp & Paper Company.

Porto Rico Railways Company, Limited.—The following is a comparative statement of earnings for May, 1918, and for the five months ended May 31st:—

May.	1917.	1918.	Increase.
Gross	$ 77,541.62	$ 86,829.37	$ 9,287.75
Net	37,043.96	38,776.84	1,732.88
For five months:—			
Gross	$370,402.98	$421,954.20	$51,551.22
Net	162,797.45	190,201.21	27,403.76

Ames-Holden & Company.—The annual statement of the company will be ready for the shareholders next week. It will show earnings of approximately $300,000 applicable to the preferred shares after charges, depreciation, deductions, etc. This would represent 12 per cent. on the 25,000 preferred shares and leave nearly 4 per cent. on the 35,000 shares of common stock. This is a decided improvement over the previous year, when the surplus applicable to the preferred amounted to $197,304, or 7.80 per cent. on the preferred and about two-thirds of 1 per cent. on the common.

Kerr Lake Mines.—The output of the company for May totalled 268,000 ounces, which works out at a rate of about 8,645 ounces per day. This is the largest month's output in the history of the company. As the price of the white metal at the present time is 99½ cents per ounce, it will be seen that the earnings of the company are approximately $270,000 for the month. With the cost of production being maintained around 25 cents per ounce, the company made a net profit during the past month of around $200,000, or about $6,000 per day. The May production compared with that of April shows an increase of about 67,000 ounces.

Montreal Light, Heat and Power Company.—The company's return for May shows an increase of $19,246 in net surplus after deducting operating expenses, interest charges and the month's proportion of the dividend on the capital stock. Net income for the month, after operating expenses and fixed charges had been allowed for, amounted to $374,645. The month's proportion of the quarterly dividend of 1 per cent. was $213,334, leaving a net surplus of $161,310. On that basis the company would be earning at the rate of about 7 per cent. on its capital stock before reserve appropriations. A monthly average of $161,310, however, is low on the basis of the company's previous performances.

Mining Corporation of Canada.—Net profits of the company for the year ending December 31st last were $2,557,091, compared with $1,895,583 in the preceding year, which result is arrived at after writing off proper amounts for depreciation and special expenditure. There was paid out of these profits $1,556,296.86 in dividends, ordinary and extra, leaving a surplus for the year of $1,000,795 to be added to profit and loss surplus, which now stands at $3,448,377. Silver production during the year was larger than in 1916 and totalled 4,485,541.56 ounces, as against 4,457,440.80 ounces in 1916.

The balance sheet of the company shows cash in banks totalling $1,032,815 on December 31st last, as against $846,367 the previous year. War loans and treasury bills total $1,154,815, and demand loans $104,940. Ore in transit is placed at 798,869, as against 430,534. Fixed assets (buildings and equipment) are written down from $329,777 to $275,021. The total assets are placed at $11,919,933, as against $4,803,425. The largest increase is in valuation of mining rights, which are placed at $7,553,123, as against $1,327,873 at the end of 1916.

J. G. White Companies.—In submitting the annual report for the year ended 31st December, 1917, the directors referred to the important work being carried on under contract with the government. More contracts of this kind are in view. This work accounts for a considerable increase in both sides of the balance sheet, but the credits will be self-liquidating, as the contracts are completed.

Depreciation of securities has made necessary the writing down of many of the investments, but the underlying situation is felt to be sound. Regarding the prospect for public utility securities the report says:—Electric light and power services, gas and street railway facilities have become such absolute necessities in the daily life of practically all cities and towns throughout the country that it is quite certain that the people who are now enjoying the benefits of these utilities will want to continue their use. To do this it will be necessary in the long run that the companies furnishing the service shall be paid the total actual cost of the service, including adequate depreciation and sufficient profit to permit them to raise the capital necessary to maintain good service. This leads the officers of your companies to hope that the values fixed by special committees of directors, as December 31st, 1917, will within a reasonable time show a substantial excess in market over inventory values of securities held by your companies. As the president, the secretary of the treasury, the comptroller of the currency, and other government and state officials have urged that utility companies should be treated with consideration and increased rates allowed, it is to be expected that the necessity of such increase will gradually be recognized by state and municipal authorities throughout the country, and adequate revenues for the utility companies provided. There is accumulating evidence that public opinion is rapidly appreciating the necessity and justice of this. When this is accomplished higher revenues and a better market and higher prices for utility securities should follow.

GREATER WINNIPEG WATER DISTRICT

One million dollars of Greater Winnipeg Water District 6 per cent. gold bonds are being offered by a syndicate at 96.86 and interest yielding 6¾ per cent. The bonds are dated July 1st, 1918, and are due July 1st, 1923. The district is a municipal corporation, constituted by special act of the Manitoba legislature, and serves the city of Winnipeg and some of its suburbs.

BANK STATEMENT FOR MAY

The bank statement for the month of May shows still further increases in circulation, in savings deposits and in total assets. The total deposits in Canada are $8,740,801 more than at the end of the month of April and $147,010,584 more than for the month of May, 1917. Savings deposits increased $14,112,669 during the month. Demand deposits, on the other hand, have fallen off considerably. A large increase in current loans indicates business activity throughout the country. Some of the figures are as follows:—

	May, 1918.		Changes during May, 1918.
Note circulation	$ 181,889,959	+	$ 1,234,995
Reserve fund	114,333,518	+	3,800
Demand deposits	535,655,751	—	22,853,470
Notice deposits	947,757,337	+	14,112,669
Total deposits in Canada	1,483,413,088	+	8,740,801
Deposits elsewhere	204,173,285	—	699,837
Current coin	76,570,686	—	1,712,621
Dominion notes	177,655,477	+	8,310,402
Deposits, central gold reserve .	79,870,000	+	600,000
Call loans in Canada	78,466,582	+	969,222
Call loans outside	172,259,879	—	7,558,652
Current loans in Canada	894,817,113	+	10,727,711
Current loans outside	99,300,926	+	33,266
Total liabilities	2,070,543,724	+	6,988,863
Total assets	2,319,958,402	+	7,687,244

The complete report will be given in *The Monetary Times* next week.

CANADIAN CREDIT MEN'S ASSOCIATION

At the annual meeting of the Ontario division of the Canadian Credit Men's Association held on Tuesday, the 25th inst., the following officers were elected: President, Thomas McMilian, Annesley-Dineen Hat and Fur Company; vice-president, A. G. Parker, W. J. Gage Company; secretary-treasurer and manager, A. S. Crighton.

Among the subjects discussed was the proposed bankruptcy act which was drafted for the last session of parliament, and will likely be taken up as a government measure at the next session. Mr. Henry Detchon, general manager of the association, addressed the meeting. He expressed his pleasure at the satisfactory results obtained by the Ontario division on behalf of the wholesale trade of the province during the past year, under the presidency of Mr. W. H. Lamont, and stated his confidence that the organization would continue to expand as a power for good, under the guiding hand of Mr. Thos. McMillan, the newly elected president. One of the most important accomplishments of the association during the year had been the securing of a Bulk Sales Act for the province of Ontario, the act coming into force on October 1st next. Mr. Detchon commended the legislation committee which, under the chairmanship of Mr. Jas. A. Catto, had rendered valuable service in connection with the proposed Bankruptcy Act. "Wholesalers in all provinces are heartily in favor of the bill as amended by the special parliamentary committee appointed by the government at the last session of parliament," said Mr. Detchon, "and practically all of the other interested organizations have given it their endorsement."

In promoting the bill the association had endeavored to retain the best features of the insolvency acts of the various provinces, and at the same time incorporate provisions for the discharge of an honest debtor under certain reasonable restrictions and the compulsory abandonment of assets of debtors who had become insolvent, without recourse to the present complicated and expensive procedure.

One of the great advantages of the Bankruptcy Act is that it would provide uniform legislation in insolvency matters throughout the Dominion. Under the act creditors would still continue to control the administration of estates in which they were interested, and the heavy expense attendant upon the operation of the English and American acts, occasioned by excessive court procedure, which is the cause of great dissatisfaction, would in a large measure be eliminated.

Mr. Detchon explained that the government had had the bill, as amended by the special parliamentary committee, reprinted for distribution in order that all interests might become familiar with it before the next session of parliament, when it is expected the measure will become law.

PREPARATION FOR NEXT WAR LOAN

As stated elsewhere in *The Monetary Times*, the various points in connection with the coming war loan were discussed in a conference at Ottawa, on Tuesday of this week. No official announcement has been made, however, and will not, it is stated, be made for some time. In fact, none of the details have been absolutely settled as yet. As in the case of the Victory loan, there will be a Dominion executive, provincial executive and a committee in charge of special subscriptions. The only actual appointment so far made has been that of Mr. E. R. Wood, as chairman of the Dominion executive.

CITY OF REGINA BONDS

City of Regina 20-year 6½ per cent. gold bonds were sold this week by tender. There were two blocks, one of $175,000 and the other of $55,000, due in 20 and 10 years, respectively. A large number of tenders were received, including the following: Wood, Gundy and Company (for straight-term 6½ per cent. bonds), 97.28 and interest; A. E. Ames and Company (for straight-term 6½ per cent. bonds), 96.59 and interest; G. A. Stimson and Company (for instalment 6½ per cent. bonds), 96.42 and interest; Macneill and Young (for instalment 6 per cent. bonds), 92.32 and interest.

The tender of Wood, Gundy and Company was accepted. The issue is being offered at par and accrued interest.

TRUST AND LOAN COMPANY OF CANADA

Profits for the year ended March 31st, 1918, amounting to £126,892 are reported in the annual statement of the Trust and Loan Company of Canada. Of this amount £29,416 was carried to the statutory reserve account, and £15,153 provided for income tax, £5,000 transferred to contingencies account, and dividends paid at the rate of 12½ per cent. per annum.

The £140,000 which stood at the credit of the special reserve account, together with £29,416 from the profits of the current year, have been transferred to the statutory reserve fund account. This fund now amounts to £600,000, which equals the paid-up capital of the company. Provision was also made for depreciation of securities. Total assets are now £3,976,170. The company is ably represented in Canada by its commissioner, Mr. J Camphell (of Winnipeg), and by assistant commissioners, Mr. E. R. Whitehead (of Winnipeg), R. C. Younge (of Montreal) and J. Rogers (of Regina).

ATLANTIC SUGAR HAS EXCELLENT YEAR

The profits of the Atlantic Sugar Refineries, Limited, for the year ended April 30th, 1918, were $462,676, which is the largest amount so far realized; $88,700 was required for bond interest; $90,882 for bank interest and exchange; and $33,991 for deferred operating charges; $40,000 was set aside for reserve for depreciation of plant, in which account there is now a balance of $60,000. The balance added to the amount already at the credit of profit and loss account, makes a total at the credit of this account of $323,439. No dividend has as yet been paid.

Considering the restrictions which have been placed on the consumption of sugar in Canada, this report is quite encouraging, as it strengthens greatly the financial position of the company. The total business for the year is, in fact, considerably greater than the business for the year 1917. The profits were at a small rate—viz., about 15 cents per 100 lbs. Mr. D. Lorne McGibbon, the president, in his address to the shareholders, also pointed out how the action of the International Sugar Commission in New York restricted in a considerable degree the business and profits of the refinery. This commission, which was formed in October, 1917, allocated as Canada's share 320,000 tons. This is again divided among the Canadian refineries, with the result that business is restricted to quite an extent.

The Atlantic Sugar Refineries was incorporated in 1912, and has a paid-up capital of $3,500,000 of common stock and $2,500,000 of 7 per cent. cumulative preferred shares; there are also $1,470,000 of first mortgage bonds outstanding. The total assets are valued at nearly $7,000,000. The business of the company extends in Canada from Halifax to Calgary, and a large export business is also done to Great Britain and France. In fact at present, in view of the growing demand, business is limited only by the restrictions imposed.

The directorate consists mostly of Montreal people.

PLEDGE OF UNENDORSED STOCK

Case Where Bankrupt Broker Has Pledged Stock With Trust Company

BY M. L. HAYWARD, B.C.L.

The case of Boston Safe Deposit and Trust Company vs. Adams, recently decided by the Massachusetts Supreme Judicial Court, arose out of a rather interesting state of facts, and the decision of the court lays down some important principles in reference to the law governing the relations of broker and customer.

In this case a customer deposited with a broker a stock certificate to cover margin on stocks which the broker was carrying for the customer, and the broker became bankrupt at a time when he was indebted to the customer. The question then arose whether, if the certificate were in the broker's hands at the time of his bankruptcy, the customer would be entitled to its return, or whether the certificate would go to the trustee in bankruptcy. On this point the court decided in favor of the customer.

"It follows," said the court, "that at that time the customer would have been entitled to receive the certificate here in question from the broker if the certificate had been in his hands at that time."

Another point arose in the same case, however, as the certificate had been deposited with the broker without being endorsed by the customer, and before his bankruptcy the broker pledged the unendorsed certificate with the Boston Safe Deposit and Trust Company, so that the question, as stated by the court, was "whether the intervening pledge by the broker with the trust company gives the trust company greater rights against the customer than the broker would have had had the certificate remained in his hands."

Rights of the Trust Company.

On this point the court decided in favor of the customer, and the following quotation from the judgment of the court will repay a careful perusal:—

"What the broker got from the customer (when the customer delivered to him without a transfer of it the certificate here in question as margin on his account) was a right in the nature of an equitable mortgage, with a right to have the legal title transferred to him so that they would be the apparent owners of the certificate and the shares represented by it, and so be in a position (in accordance with the custom) to borrow money in his own name on the strength of the certificate and the shares represented by it, without regard to the state of the account between him and the customer. In place of perfecting his title, and so putting himself in a position to do this, the broker assigned to the trust company his unperfected rights in the certificate and the shares represented by it. What he assigned to the trust company was something in the nature of an equity or a chose in action. That the trust company knew; or at least it was chargeable with knowledge of that fact by reason of the fact that the certificate and the shares represented by it had not been transferred by the customer, the owner of it and them. That is to say, what the broker had was an equity, or chose in action. All that he had to give to the trust company was an equity or chose in action. In case of the assignment of an equity or of a chose in action, an assignee gets, and can get, no greater rights than his assignor had. The trust company could have called for a transfer of the certificate and of the shares represented by them. If the customer was not bound to make a transfer to the trust company, it was at least bound to make one to the broker to enable him to make a repledge of the certificate independently of the state of the account between them and the customer. But the trust company did not do so. It chose to rest content with an assignment of the equitable right or chose in action which the broker had. When he became bankrupt it undertook to enforce his equitable right to chose in action. The equitable right of the broker to compel a transfer of the legal title had then come to an end, as we have already held. As assignee of the broker, the trust company's equitable right was no greater than theirs.

"In this case the trust company was not misled by the customer. From the state of the certificate it knew or was chargeable with knowledge that the certificate and the shares represented by it had not been assigned by the customer, and that all that it was getting was an equitable right.

"We are of opinion, therefore, that the trust company has no right to compel the customer to transfer to it the legal title to this certificate and to the shares represented by it."

In this case the court also made the following general remarks in reference to the legal effect of margin transactions:—

"Under the findings of the judge the certificate was handed by the customer to the broker, not because the customer was then indebted to him (for, under the findings, he was not then indebted to him), but because, by the contract between a customer and a stockholder carrying shares for the customer on a margin, it is the duty of the customer to furnish the broker with a margin for his protection in case of a decline in the price of the stock carried, and to enable the broker to borrow the money required to carry the account. In borrowing money on a margin this is necessary, and for that reason and for the protection of the stockbroker the customer has to furnish the broker with securities, even though the customer's account is good in the sense that the securities bought are worth more than the purchase money paid for them."

NEW STEEL FROM OLD

Not so long ago the possibility of making new or good steel solely from old steel or scrap, without the addition of virgin metal as pig iron, was regarded as a dream, at least so far as any commercial aspect was concerned. But there is no longer anything unusual about this. The electric furnace has revolutionized our ideas of this as well as of some other metallurgical phases of the steel industry. To-day, steel of the best quality is made in large units from scrap of poor quality, and from scrap alone, in such furnaces. Even old steel is almost magically reconverted into excellent pig iron, something that would have been considered chimerical if suggested ten years ago.

Something similar to this achievement of the electric furnace is now being accomplished on a large scale in the open-hearth. In two instances, one in Canada and one in the United States, heats as large as 25 tons are being made where 95 per cent. of scrap steel, mostly shell turnings, is the charge.

Necessity is again the mother of invention. War necessity certainly has opened the way to results hitherto regarded as impossible.—"Iron Age."

BRITISH COLUMBIA ELECTRIC RAILWAY

The British Columbia Electric Railway Company, Limited, is experiencing the financial difficulties that are being met by utility companies all over the American continent. This is the result of a fixed scale of prices, while costs of production are increasing rapidly. In contrast to the great majority of manufacturing companies, utility companies and railroads can only increase their charges with difficulty. Under the franchise of the British Columbia Electric the fares cannot be increased above five cents, although the present basis is a 4⅙-cent fare. Owing to the fact that the franchise expires next February, the question of raising fares is a difficult one at present. Jitney competition has been experienced, and is still being met, Vancouver being the only city in Canada in which they still operate. This is in spite of a recommendation made some time ago by Professor Shortt, after a special investigation, that they be prohibited. Curiously enough, the recommendation was acted on by the city of Winnipeg, but not by the city of Vancouver. A deficit has for some time been experienced by the company.

Just at present it is having difficulty with its employees on the wage question. Street railway men recently asked an increase in the wage bill which would practically amount to 50 per cent. The maximum wage for city motormen and conductors was to be 51 cents per hour in place of 40 cents as at present. While this was an increase of only 30 per cent., other stipulations, including that for an eight-hour day, brought up the total amount. This would mean an increase in costs to $640,000 a year. The company offered a 10 per cent. increase, and when this was refused by the men they applied for arbitration. This was satisfactory to both parties and will be proceeded with very shortly.

The head office of the company is in London, England, and it is, in fact, incorporated by Imperial charter. The original issues of stock and debentures were made in England, and most of the securities are still held there.

A CASE ON LIABILITY INSURANCE

Liability for Loss of Profits from Damaged Property—Case Where Stock Has Been Pledged

A case recently decided by the Supreme Court of Nova Scotia, wherein the Nova Scotia Tramways and Power Company brought suit against the Employer's Liability Assurance Company, turned on a rather neat point of insurance law, and will repay a careful perusal.

In this case the Nova Scotia Tramways and Power Company was operating an electric railway in Halifax, and took out a policy in the Employer's Liability Assurance Company, whereby the assurance company agreed to protect the power company from loss from the liability imposed by law upon the power company for damages on account of bodily injury suffered by any person or persons other than the employees of the power company, and an additional clause in the policy provided that it would "cover loss from liability for damage to property of every description."

The policy was duly issued, the premium paid, and then, one fine day, one of the power company's electric cars jumped the rails, and ran into and injured a store building and the stock of goods therein.

It was admitted, and there was no dispute on this point, that the power company was liable for the damage to the building and the goods, and also for the storekeeper's loss of profits from his business while the building was being repaired, and the insurance company admitted that it was liable for the damage to the building and the goods, but claimed that it was not liable for the loss of profits, so the question for the decision of the Court was whether the words of the policy, loss from liability for damage to property of every description," would cover the loss of profits under the above circumstances, and the decision of the Supreme Court of Nova Scotia was that the assurance company was liable.

Analogy of Bodily Injury.

"It will not be denied," said the Chief Justice, "that if the power company became liable for damages on account of bodily injury sustained by a person injured on its electric cars, it would be liable for all the damages sustained by that person by reason of his being incapacitated for work for a period of time. His incapacity to earn wages, or his inability to attend to his business would be an element to take into consideration in assessing the damages for his injuries, and I do not see how it could be contended that the assurance company would not be liable to indemnify the power company for the whole of the damages the latter company was compelled to pay, including the portion awarded to the individual by reason of his inability to earn wages or attend to his business for the time being.

"In the same way, the power company in this case became liable to the storekeeper for not only the physical injury to the property, but also for the loss or injury incident to that physical injury—namely, the inability of the building to perform its usual functions while it is being repaired.

"If the assurance company is liable in the former case, I do not see why it is not liable in the latter.

"The policy requires the assurance company to indemnify the power company against loss for the liability imposed upon it by law for damage to property and part of that damage imposed upon it by law is due to the fact that the property is by the injury rendered for a time incapable for the use to which it was formerly put.

"The power company has suffered a loss through, or by reason of, its liability for damages to the property and the whole of that damage was what the assurance company agreed to indemnify the power company against."

Liberal Interpretation of the Clause.

Another Judge stated the same principle in the following words:—

"I think that the words of the policy may be fairly said to mean an undertaking to indemnify the power company against any loss which it may be legally liable to pay, by reason of its having, in the operation of its electric cars, accidentally damaged any description of property. The loss of profits in question, I think, clearly, the assurance company was liable to pay by reason of such damage. The words, 'damage to property,' in the policy, taking it as a whole, were intended, I think, as the equivalent of 'by reason of damage to property.' Bearing this in mind, and using the very words of the policy, the power company's liability for damage to property of a third party resulting from such an accident is not limited to the mere diminution in value of the property. It is liable as a tort feasor for the negligence of its servants and not as underwriters insuring the property damaged. And the assurance company undertakes to indemnify the power company against the whole loss of such liability and not a part of it."

HOSPITALS AND CHARITIES IN ONTARIO

Administration Has Been Economical—War Production of Food Encouraged

According to the 48th annual report of the inspector of prisons and public charities of Ontario, the number of institutions of this kind in the province at present is 265. There are 94 public hospitals, 68 private hospitals, 38 refuges, 29 orphanages, three homes for incurables, two convalescent homes and 31 county houses of refuge. Each of these, as far as possible, has received official visits of inspection. During the year the total expenditure for hospitals was $4,450,957, and the provincial grant was $318,450. The principles upon which provincial aid is given, are as follows:—

1. A provincial grant is made for all patients in a hospital during the first ten years of its existence at the rate of 20 cents per day, irrespective of what sum is contributed by the patients themselves. From August 10th, 1917, this grant has been increased to 30 cents per day.

2. After a hospital has been in existence for ten years the grant is paid only for patients for whose maintenance $7 per week or less is contributed.

3. In all cases the limit is 120 days, and if the patients remain in the hospital longer than that period, the refuge rate of seven cents per day is allowed.

4. Children over one year and under 12 years are allowed for at the rate of seven cents per day.

5. No allowance is made for infants under one year of age.

Aid to Sanatoria for Consumptives.

Special regulations apply to sanatoria, viz.:—

1. A grant of $4,000 on the erection and satisfactory equipment of the necessary buildings.

2. A grant of $3 per week for the maintenance of each indigent patient.

These grants to be in consideration of proper accommodation being provided and only to assist in the maintenance of indigent patients coming from the province of Ontario. There were 2,638 patients cared for in the 12 different Sanatoria for Consumptives during the past year.

Of the expenditure for hospitals, $637,109 was for capital account, the balance being for maintenance and equipment. Expenses of management and upkeep, have, of course, increased very rapidly. In March, 1917, the cost rate per patient of some of the leading hospitals was as follows:—

Toronto General Hospital	$2.17
Royal Victoria Hospital, Montreal	2.20
Hospital for Sick Children, Toronto	2.26
Winnipeg General Hospital	2.47
Montreal General Hospital, Montreal	2.53
Johns Hopkins, Baltimore	3.41
Massachusetts General, Boston	3.31
Presbyterian Hospital, New York	3.41

The cost rate per day has now increased to over $3 at Toronto General Hospital, and to $2.51 per day at the Hospital for Sick Children, Toronto. Prohibition legislation appears to have one concrete result at least, in the number of private hospitals in the province, many of which were almost wholly for the use of alcoholic patients.

The General Hospital, Toronto, receives the largest amount of provincial aid—namely, $20,936. Others who receive large amounts are the City Hospital of Hamilton, the Hospital for Sick Children, Toronto, and St. Michael's Hospital, Toronto. The average cost of each patient per day varies from 71 cents in the case of the General Hospital at Mattawa, to over $3 per day in several of the hospitals.

The cost of the houses of refuge is, of course, much lower, varying from 28 cents per day to $1.25 per day. The county houses of refuge are largely supported by taxation, although some revenue is derived from profits of agriculture and other sources.

CANADIAN MILLING INDUSTRY

One of the Most Successful Canadian Industries—Regulations Have Not Achieved Their Object

Greenshields and Company, of Montreal, in their Monthly Review for June, comment as follows on the recent report of the Cost of Living Commissioner on the milling industry:—

A report on the milling industry of Canada, issued within the month from the Cost of Living Branch of the Department of Labor at Ottawa, might be dismissed as of little moment, but for one thing. Public sentiment being not unnaturally sensitive to and suspicious of anything that savors of war profiteering, it is at the least unfortunate that an official report of the kind should be so framed as to tend to the incitement of public opinion against legitimate business, operating fairly under the laws of the country not a monopoly in any sense, and, on the report's own showing, entitled to commendation for the moderation of its charges, not to blame for extortion. If Bolshevist doctrines are slow to take hold in Canada, plainly some official quarters can lay claim to little of the credit.

Cost of Living.

The auspices under which the report was issued would suggest that some plan for the reduction of food costs was under consideration. Nothing of the sort appears. The larger companies, because of efficiency and quantity production, are proved to have been earning a unit of profit so small as to be insufficient to sustain the smaller companies. To fix arbitrarily a lower unit of profit would drive some hundreds of these smaller companies out of business.

But the larger companies, because of an increase in the volume of business handled, have been able to make profits larger than normal, and the report turns from a consideration of cost-of-living factors to a consideration of whether the government might not conveniently lay claim to a share of those profits greater than it now obtains through the operation of business profits taxes applicable to all industries alike. This might be assumed to be the province of the finance department, but was evidently not so considered by the cost of living investigator.

Unit of Profit Small.

What the report discloses is principally that, although under an arrangement made concurrently with the fixing of a price for wheat, profits of the millers were to be limited to 25 cents a barrel, the larger companies have in fact been earning less. The Ogilvie Company, for instance, is shown to have expanded its earnings from 15 cents a barrel in 1914 to 20 cents in 1917. The commercial risk of the milling business had more than doubled, because of the rise in the price of wheat, but the profit of the miller had increased only one-third. Among the larger companies as a whole, the report found that profits per barrel milled in 1917 had varied from about 17 cents to 30 cents, with the admission that extraneous earnings, such as profits on wheat—which by a turn of the markets could have been converted into a loss—played a considerable part in the showing.

The common-sense view would be that, having regard to capital invested and risks assumed, the millers have been charging moderately for the services rendered, and obviously have had little or nothing to do with the rise in the cost of living. They have been averaging apparently a profit of about 2 per cent. on sales, while the farmer, if the cost of raising wheat be placed at 80 cents a bushel, has been earning a profit of about 175 per cent.

Misleading Deductions.

But the obvious meaning of the figures has been obscured or distorted by the emphasis placed on the fact that, with the unit of profit so moderate, a large increase in the volume of business has permitted of some increase in total earnings. Accordingly the summaries of the report as sent broadcast through Canada were so worded to lend themselves readily to double-column captions along the lines of the "Enormous Profits of the Millers," with their incentive to off-hand deductions by the unthinking masses who take no trouble to analyse the facts for themselves.

Before the suggestion of the investigator be adopted, namely, that special taxation be decreed against the millers, the government can hardly fail to give weight to several considerations:—

1. Probably more than any other industry in Canada, the milling industry may be considered to be "on its own" to-day. In the early part of the war, the duty was taken off wheat flour, and the milling industry was thereby thrown open to free competition from outside Canada, although the millers had paid, and were expected to continue paying, duty on machinery needed for their plants. Temporarily there is an embargo on flour in both the United States and Canada, due to the mutual desire of the countries to protect their supplies. But this was a measure decided on in the interest of the Allies, and not for the protection of the millers.

2. The millers are already contributing to the public treasury under a business profits tax which ranks as one of the most drastic war taxation measures in force among the allied nations. When profits rise above 20 per cent. on invested capital, the government takes 75 per cent. and leaves a company with 25 per cent. To increase the government's proportion would plainly bring taxation to a limit where private enterprise would naturally halt altogether. That such is felt to be the case is an obvious deduction from parliament's recent decision to re-enact the tax, as it stood, with further upward revision, despite the urgent needs of the treasury.

One of Our Big Exporters.

3. Excessive or discriminative taxation applied to the millers would be a fatal blow to the development of one of the country's most important exporting industries. Millions of dollars have been added to Canada's exports by a far-sighted policy of restricting exports of pulp wood in order that the manufacture of pulp and paper products might be increased. We are talking of doubling our production of wheat, and, reversing the policy in respect to pulp and paper, suggesting something to discourage the milling of wheat into flour, and so the sale of the finished rather than the raw article. For the eleven months ended February last, Canadian exports of flour amounted to 8,881,673 barrels, of a value of $84,747,000. In quantity these figures showed an increase of more than 400 per cent. over the figures for the full fiscal year of 1907-1908, and in value an increase of more than 900 per cent. The progressive growth of our flour exports as a factor in Canada's external trade is set forth impressively enough in the following summary of exports for the fiscal period ended March 31st in each of the past eleven years:—

	Barrels.	Value.
1918 (x)	8,881,673	$84,747,000
1917	7,425,723	47,473,474
1916	6,400,214	35,767,044
1915	4,952,337	24,610,946
1914	4,832,183	20,581,079
1913	4,478,043	19,970,689
1912	3,738,836	16,034,064
1911	3,049,046	13,854,790
1910	3,064,028	14,859,854
1909	1,738,038	7,991,413
1908	1,962,740	3,454,954

(x) Eleven months ended February 28th.

Reinvestment of Profits.

4. Expansion in output as shown in the foregoing figures has proceeded very considerably from the reinvestment of surplus earnings of the companies, and such reinvestment is Canada's main dependence to-day for industrial growth. New capital is going largely into war loans. It could not be attracted in any event into an industry subject to discriminative taxes. If the milling industry is to keep pace with Canada's expansion in agricultural production, and keep within the country the profits of capital and labor that are rightly hers, rather than turn them over to the foreigner who would buy our wheat and do his own milling, is it the part of common sense to suggest that this is an industry to be singled out for a special levy on profits?

Arrangements to ship 28,000,000 tons of coal to northwestern states and portions of Canada, via the Great Lakes, were made recently by the United States fuel and railroad administrations. Approximately four million tons of this quantity will be shipped to Canada.

The Hamilton Provident and Loan Society

DIVIDEND No. 94

Notice is hereby given that a Dividend at the rate of Eight per cent. per annum has been declared for the half year ending June 30th, 1918, upon the paid-up Capital Stock of the Society, and that the same will be payable at the Society's Head Office, Hamilton, Ontario, on and after Tuesday, the 2nd day of July, 1918.

The Transfer Books will be closed from the 15th to the 30th of June, both days inclusive.

CANADA'S COAL MINING INDUSTRY

Deposits Are Not Economically Distributed—Government to Enter Industry

The report of the Honorary Advisory Council for Scientific and Industrial Research on the Briquetting of Lignites has been presented to the public by the sub-committee of the Privy Council. The report is the work of Mr. R. A. Ross, E.E., and in preparing it, use has been made of all the literature and information in the hands of the Dominion government, and of the public records of the United States government. An excellent map illustrates the origin of the coal consumed in different parts of Canada. Vancouver Island coal supplies most of British Columbia, though Nicola Valley coal is used to a considerable extent in the Okanagan district. Crow's Nest and Lethbridge coal is used in a wide territory extending from south-eastern British Columbia, across southern Alberta and Saskatchewan to the boundary of Manitoba. Edmonton coal is used principally in central Alberta and Saskatchewan, and Souris coal in south-eastern Saskatchewan. The district from Winnipeg to Montreal is supplied with United States coal, this territory being too far distant from the coal sources of the east and west of Canada to allow of successful competition from these points. At both extremities there is a district where there is more or less competition. In western Manitoba, for instance, both United States and Alberta coal are used. The whole of the Maritime Provinces and southern Quebec, are, of course, supplied by Nova Scotia coal. The difficulty with Canadian coal, is, it is evident, one of distribution rather than of quantity or quality. The conclusions of the committee are summarized as follows:—

1st. The fuel resources of the Dominion of Canada are second only to those of the United States, the greatest coal country in the world.

2nd. In spite of this fact, Canada imports at present, and always has imported, 50 per cent. of her fuel from the United States.

3rd. Canadian efficiency in this regard is, therefore, about 50 per cent.

4th. Under these conditions the problem must be attacked, preferably by the government, and not by isolated commercial agencies working in competition with each other.

5th. There is in Canada an immense area whose coal requirements are met from American sources.

6th. The province of Saskatchewan is the balancing point for fuel from the east and from the west, and for this reason fuel prices are the highest, although underlying a great part of this province are immense deposits of lignite awaiting use.

7th. It is therefore recommended that the attack on the fuel problem of Canada be concentrated first on the production of domestic fuel from the lignites of Saskatchewan for the following reasons:—

(a) Because the price of anthracite coal in normal times in this district is the highest and runs about $15 per ton. (b) Because successful briquetting of the lignites of southern Saskatchewan will also solve the problem of briquetting the higher grade lignites of Alberta. They also recommend that immediate action be taken by the Dominion government and outlined their reasons as follows:—

1st. The necessity exists for the development of all our fuel resources.

2nd. The best immediate returns will be secured by the development of lignite briquetting processes.

3rd. The country has the raw materials, the brains and the command of money for such national work.

4th. Leaving the problem in private hands will result in long delays during which we must buy our fuel abroad.

5th. In view of the broad national importance of the field the actual capital necessary is of secondary importance only.

6th. Full success will mean the stoppage of millions of outgo to the United States and its expenditure in wages in Canada.

7th. If only a partial success be secured a step shall have been taken in a problem which must be solved ultimately.

8th. A complete failure is unthinkable, but granted that outcome, the money if judiciously spent will have demonstrated the uselessness of further trials, and will lay a ghost which otherwise will be continually in evidence.

Regarding the commercial aspects of the proposition, the committee report as follows:—

Having dealt with the technical aspects of carbonizing and briquetting, it is now appropriate to discuss the handling and marketing of the finished product. This involves commercial handling which is equally important as production. As notes on the above remarks, the following are presented:—

1st. The plant in contemplation will be constructed as a unit to which other units of similar size can be added, or established elsewhere. A similar plant of this size would not supply more than a local market. If constructed at Estevan, for example, it would have its market only in Regina. Moose Jaw, and the intervening country, as the tonnage of 40,000 per year of domestic fuel would only supply the requirements of a population of 20,000 people.

2nd. Assuming a cost of $7 per ton at the plant, and a transportation cost of $1.50 to Moose Jaw, with a dealer's profit and delivery cost of $1.50, the total price to the consumer at Moose Jaw would not exceed $10 per ton. It would be less at Regina, and still less in the intervening country districts where it would not be sold to a dealer or delivered by him, but would be unloaded by the farmers from their own cars. This price at Moose Jaw, however, under the worst conditions would be two to five dollars less per ton than present prices paid.

3rd. While the present costs of coal have been referred to above, it must not be supposed that these will continue, for recent past records indicate an increased cost of 50 cents per ton per year. As a matter of fact, the rate of increase may be expected to be considerably higher than this, leading eventually to the elimination of anthracite altogether on the score of price, with the imminent prospect of an embargo being placed on the export of this coal from the United States in the not distant future. In short, the costs of anthracite must go up, and the costs of briquettes will go down with larger production, and the spread, therefore, becomes continually greater.

4th. Using present figures for one year's operation, the annual saving of a minimum of $2 per ton to the people of this district would total $60,000.

5th. Even if no saving were made, and the selling costs of briquettes were as high as that of anthracite coal at present, there would be kept in the country the sum of $360,000 per year.

The cost of a plant to produce 30,000 tons per day is estimated as follows:—

Construction and equipment	$346,150
Cost of operation for six months (an experimental period)	10,000
Interest for six months at 6 per cent.	10,384
Total	$366,534

The fixed charges—viz., 6 per cent. for interest, 10 per cent. for depreciation and 4 per cent. for repairs, would come to 20 per cent., or $73,307. This would be $2.44 per ton of coal produced. It is estimated that the operating costs would be $136,500 per year, or $4.55 per ton. This makes a total cost per ton of $6.99. In these calculations no allowance was made for by-products, many of which are quite valuable.

CANADIAN OFFERINGS IN UNITED STATES

Sir Thomas White, upon his return from Washington last week, outlined the procedure regarding the issue and sale of Canadian securities in the United States. He referred, of course, to the wholesaling of stocks and bonds to bankers and dealers there and not to transactions between individuals, regarding which there is no restriction whatever.

"As a matter of procedure," said Mr. White, "the board will require that all Canadian issues, before being considered by them, shall first be approved as to issue in Canada by the Canadian minister of finance. This preliminary having been complied with, the board will then determine, upon their individual merits, applications for permission to issue in the United States. These applications must be made and supported before the American Capital Issues Board by the parties interested or their representatives. They will not be made or recommended for federal consideration by the Dominion authorities, as this, for obvious reasons, would be undesirable."

IMPERIAL FINANCE AND TRADE

Imperial Finance Board Proposed—Colonial Sentiment in Favor of Individual Borrowing

"United Empire," the journal of the Royal Colonial Institute, discusses in its June number the financial relations between the United Kingdom and the Empire as follows:—

"One of the questions which will come before the forthcoming Imperial Conference is that of finance. Now that the United States have taken over the financing of the Allies, our own task is relatively so much easier, since Great Britain has only to finance herself and the Dominions, and the latter are in part financing themselves. But an analysis of the position at once shows the complexity of the problem. Before the war the Dominions went to Lombard Street instead of to Downing Street for their loans; since the war their loan issues to the public have been few, and the Imperial government has lent them money direct. But this money has been for two different purposes—first, for the training and transport of Dominion troops, in other words, for direct war purposes; and, secondly, in the way of trade for the purchase and transport of Dominion produce, or indirect war purposes. Now the first will cease with peace, or, at least, with the return of the Dominion troops to their homes; the second, owing to the general disturbance of trade conditions, the shortage of transport, and the importance of preventing raw materials getting through to the enemy, will apparently last long after the declaration of peace—according to the terms of the published zinc contract with Australia, for a period of at least ten years after the war. There is this further difference: In the latter case we obtain goods against cash, and it is in a sense an ordinary commercial transaction, which, in some shape or other, would have taken place had there been no war, although the bargain would have been struck between individual traders and not between governments. In the former case nothing of the kind would have occurred but for the war, and we cannot estimate valor and military assistance freely given in a ledger account. There would, therefore, seem to be a case for consolidating the one loan at the end of the war, when the military account is closed, and for maintaining the other series of trading accounts on a separate basis.

Finance After the War.

"It must be remembered that as soon as the war is over, the Dominions will need money for public works development, which was urgently required before 1914, and which now has a leeway of four years to make up. The Dominions will probably prefer to revert to the old system of individual borrowing in Lombard Street, when 'each cask stood on its own bottom'—the additional half per cent. they may have to pay is well worth while in an autonomous Empire; and for that reason the formation of an Imperial finance board, which has been suggested in some quarters, is not likely to be looked on with much favor for that class of business. It is unquestionably a wise instinct that leads each individual to prefer to keep his own bank account. But the fact that Imperial trade will remain for some time in the hands of the governments does suggest that a finance department would be useful in connection with these transactions, since it would help to regulate exchange, which in any event will be a ticklish problem during the four or five years when things are beginning to settle down. But before such a department is constituted, the Empire will have to come to a definite decision on a question of principle—whether the new system of inter-state trading is to be permanent, in which case the finance department would lay its foundations broad and deep for a recognized new method; or whether it is only to last a few years as a temporary expedient, until we go back to pre-war methods of private and individual trade, in which case the finance department would be in the position of a temporary receiver winding up various estates as occasion offered. Mr. Hughes, in a speech delivered some months ago in Australia, seemed to suggest the inauguration of a permanent method of state organization of production, collection and sale, which is obviously not far removed from inter-state trading; the Non-Ferrous Metals Act in the United Kingdom was another instance of the tendency in the same direction from this side. This question of principle should be discussed by the Imperial Conference at some length, and, if possible, brought to a decision. It is a matter on which there may be legitimate differences of opinion between one state and another as to the best course to pursue, and a discussion would clear the air all round."

MUNICIPAL BOND MARKET

The Monetary Times' Weekly Register of Municipal Activities and Financing

Edmundston, N.B.—Messrs. J. M. Robinson and Sons, of St. John, N.B., have been awarded a block of $40,000 6 per cent. 20-year bonds.

Red Deer, Alta.—Tenders for $24,000 treasury bills were opened on June 22nd. The offer of 97.75, of the Canada Bond Corporation, of Toronto, was accepted.

Vancouver, B.C.—The municipal bond by-law for 1918 was read and taken up for the first time last week. It provides for the issuance of $500,000 of 5-year 6 per cent. debentures.

Edmonton, Alta.—The finance committee of the school board and the city council discussed the term of debentures to be given by the city when the trustees invest their $300,000 capital funds in Edmonton securities, at a joint meeting on June 19th. While several of the committee appeared desirous of coming to a decision, solving as it would financial problems for the city, it was agreed to let the matter stand over until a meeting to be called within a few days.

Saskatchewan.—The following is a list of authorizations granted by the Local Government Board from June 10 to June 14, 1918:—

School Districts.—*Bighorn, $500 8-years not ex. 8 per cent. annuity; Dymtro Sapach, Arabella. Vimy, $2,500 10-years not ex. 8 per cent. annuity; H. L. Pickering, Wilcox. Coulee Creek, $2,500 10-years not ex. 8 per cent. annuity; C. L. Hanson, Glenside. Kellerville, $2,800 10-years not ex. 8 per cent. annuity; J. L. Dodds, Cliftonville. *Stony Vista, $600 5-years not ex. 8 per cent. instalment; F. C. Callan, Fairmount. Thorne, $2,500 10-years not ex. 8 per cent. annuity; V. Thorne, Monchy. Laporta, $2,200 10-years not ex. 8 per cent. annuity; W. W. Young, Craiglands. Burton Lake, $2,500 20-years not ex. 7 per cent. instalment; Anthony Jaeb, Humboldt.

Rural Telephone Companies.—Stockholm, $8,600 15-years not ex. 8 per cent. annuity; B. R. Edquist, Stockholm. Middleton, $1,300 15-years not ex. 8 per cent. annuity; J. R. Hill, Earl Grey. Kindred, $800 6-years not ex. 8 per cent. annuity; C. S. Dennis, Holdfast. Lothian, $11,900 15-years not ex. 8 per cent. annuity; Geo. E. Rogers, Smithburg. Robsart, $12,500 15-years not ex. 8 per cent. annuity; Thos. F. McGregor, Robsart.

The following is a list of debentures reported sold from June 10 to June 14th, 1918:—

School Districts.—Home, $2,600, Canada, $1,600, Sunshine, $2,500, Rock Point, $2,500, Rocky Hills, $1,800; Waterman-Waterbury Manufacturing Company, Regina. Springbrook, $1,000; Canada Landed and National Investment Company, Winnipeg.

Rural Telephone Companies.—Richburg, $8,400; Kerr, Fleming and Company, Regina. Spalding, $24,200; Nay and James, Regina. Lorndale, $3,800, North Forres, $5,700; W. L. McKinnon and Company, Regina.

Towns.—Leader, $7,500, $3,500; W. L. McKinnon and Company, Regina.

Rural Municipality.—Montmartre, $1,200, W. L. McKinnon and Company, Regina.

CONFERENCE ON VITAL STATISTICS

To Remain in Provincial Hands, But Uniform Methods To Be Adopted

For some time need has been felt for greater uniformity in provincial systems of vital statistics. Accordingly, a conference on the vital statistics of Canada, between representatives of the Dominion bureau of statistics and delegates of the provincial registrars general, and of other institutions interested in the subject, was held at the offices of the bureau on Wednesday and Thursday, the 19th and 20th instant, when the following members were present:—Mr. R. H. Coats, Dominion statistician; Mr. E. H. St. Denis, secretary; Mr. E. S. Macphail, superintendent of compilation, and Mr. E. H. Godfrey, editor, (Dominion bureau of statistics); Mr. A. J. Campbell, (bureau of vital statistics, Halifax, N.S.); the Hon. Wm. F. Roberts, M.D., (member of the executive council, Fredericton, N.B.); Captain Herbert H. Smith, Fredericton, N.B.; M. G. E. Marquis (chief, bureau of statistics, Quebec); Dr. J. W. Bonnier, (statistician, superior board of health for province of Quebec, Montreal); Lt.-Col. J. W. S. McCullough, M.D., (deputy registrar general for Ontario, Toronto); Mr. S. J. Manchester, (registrar general's department, Toronto, Ontario); the Hon. J. W. Armstrong, (provincial secretary, Winnipeg, Manitoba); Dr. M. M. Seymour, (commissioner of public health, Regina, Sask.); Mr. Donald Mackie, (acting deputy registrar general, Edmonton, Alberta); Dr. W. H. Davis, (chief statistician for vital statistics, United States census bureau, Washington); Mr. E. Blake Robertson, (assistant superintendent, department of immigration and colonization, Ottawa); Dr. P. H. Bryce, (chief medical officer, department of immigration and colonization, Ottawa); Mr. G. D. Finlayson, (superintendent of insurance, Ottawa); Mr. A. D. Watson, (actuary, insurance department, Ottawa); Major D. L. McKeand, M.C., (board of pension commissioners, Ottawa); Mr. M. J. Patton, (commission of conservation, Ottawa); Dr. H. B. Small, (Canadian medical association, Ottawa); Mr. H. J. Ross, (union of Canadian municipalities, Montreal); Mr. D. E. Kilgour, Montreal; Mr. Hugh H. Wolfenden, Ottawa; Mr. Arthur H. Wood, Montreal, (Actuarial Society of America), and Mr. Robert E. Mills, city department of public health, Toronto.

Sir George Foster (minister of trade and commerce) opened the proceedings with a brief address of welcome to the delegates, in the course of which he said that vital statistics had to do with the human element and with life and its progress, a knowledge of which was necessary as a basis for the work of social reformers and of legislation. In the negotiations which had preceded the conference they had been met by the provincial governments in the broadest and most generous spirit of good will and desire to co-ordinate. There were differences in jurisdiction and in policies, but difficulties of this kind could always be overcome by a reasonable method of co-operation; so that each could retain its own powers and yet all work together for the same purpose.

On the motion of Dr. Bryce, seconded by Major McKeand, Mr. R. H. Coats, Dominion statistician, was elected chairman of the conference, and read a brief paper dealing with the general subject of vital statistics, and the problems that awaited solution.

The conference then went into committee and spent most of the two days, Wednesday and Thursday, in discussing, clause by clause, the provisions and schedules of a model bill which it was proposed should be recommended by the conference for enactment by each of the provincial legislatures so far as local conditions might admit.

Bill to be Prepared.

In the course of the discussion, it was resolved that the model bill and schedules should be referred to a committee consisting of representatives of the nine provinces with instructions to give effect to the principles agreed upon by the conference and to submit the bill as finally settled to the respective provincial governments.

Resolutions were also adopted in favor of: (1) the omission of mortuary statistics from future censuses of the Dominion government, and (2) the organization of a system of vital statistics to include births, marriages and deaths, to be on an annual basis, and to be collected, compiled and published in a manner that will permit of comparison between different localities and provinces throughout the Dominion and between Canada as a whole and other countries, such statistics to be secured by Dominion and provincial co-operation following the procedure indicated by sections 9 and 34 of the Statistics Act, 1918.

The proceedings then closed with the customary votes of thanks.

INTERSTATE COMMERCE COMMISSION

Relations of Commerce Commission With Railroad Administration on the Rate Question

The following announcement has just been made by Mr. George B. McGinty, secretary of the Inter-State Commerce Commission of the United States.

"The act for the Federal control of railroads and certain recent orders of the Director General have raised questions regarding the status of some of the cases before the commission attacking rates not initiated by the United States Railroad Administration. Inquiry has arisen how far the existence of rates initiated under section 10 of the Federal Control Act will limit or preclude the commission from making lawfully effective orders in proceedings brought prior to such initiation of rates.

"The commission has always lent its active assistance to the settlement of complaints and difficulties between carriers and shippers through informal adjustment. Thousands of complaints and difficulties have been thus disposed of. There seems every reason why under Federal control this policy should be continued with reference to complaints involving rates initiated by the United States Railroad Administration. Such action on our part would seem to be mandatory under section 8 of the Federal Control Act, and we intend to accord our advice, assistance and co-operation to that end wherever possible. We understand that the Director General is in accord with this plan of composing difficulties as regards rates initiated by the United States Railroad Administration.

"Failing such efforts to compose difficulties or settle causes of complaint informally, the commission is required under section 10 of the Federal Control Act upon complaint to enter upon a hearing concerning the justness and reasonableness of so much of any order made thereunder as establishes or changes any rate, fare, charge, classification, regulation, or practice of any carrier under Federal control. Save for the applicable provisions of this statute the jurisdiction of the commission remains what it has been in the past. The commission has not made and can not make any commitment which will preclude its full exercise of the jurisdiction vested in it.

"A rate initiated by the United States Railroad Administration can not be lawfully altered by the commission, except on complaint after hearing at which the United States Railroad Administration is entitled to be heard. It follows that inasmuch as a new freight rate structure becomes effective June 25th next, some of these rates might conflict with orders which the commission might enter prescribing rates for the future, even though the orders were entered on the basis of the records in complaints now pending before us. It seems, however, that in certain cases the commission can make lawfully effective orders in proceedings brought prior to such Federal initiation of rates. Thus any pending complaint, where the complainant desires to use the finding of the commission as a possible basis for a suit at law for reparation, will be disposed of on the present record so far as that matter is concerned. The same is true of cases pending in so far as they seek reparation for damage from rates unlawfully exacted. Allegations of discrimination may, in certain cases, be disposed of on the records now before us. We do not prejudge the question which has been raised whether by amendment to pleadings in pending cases the United States Railroad Administration may be made a party against which a lawfully effective order may be entered.

"The commission will, as of course, continue consideration and reach conclusions as above indicated in pending cases; where it is possible to make a lawfully effective order without amendment of the pleadings that will be done; and, so far as is possible, the records heretofore built up will be made available for the determination of the issues. The dockets in pending cases will be analyzed, and where it appears that doubt exists whether, without amendment or supplemental hearing, the commission can enter a lawfully effective order, the parties will be so notified.

"Such appropriate changes as the Federal Control Act may render necessary will be made in the commission's rules of practice."

TORONTO HYDRO-ELECTRIC SYSTEM

Large Surplus Has Been Earned in Spite of the High Costs of Operation

According to the seventh annual report of the Toronto Hydro-Electric system for the year ended December, 31st, 1917, a surplus of $34,467 was earned. The result of the operations for the year was as follows:—

The gross income amounted to the sum of	$2,049,382
The cost of electric current and the expenses of operation and management, including repairs and maintenance, absorbed the sum of	1,294,022
Leaving a surplus of income on operating account for 1917 of	$ 755,360
Interest, depreciation and sinking funds	720,892
Leaving a surplus of net income of	$ 34,467

Reviewing the history of the commission for the past six years, the commissioners make the following statement:—

"At this, the close of slightly over six complete years of operation, during which time two rate reductions have taken place, it may be of interest to point out that the enterprise has fully paid its way, and earned a surplus of $75,819.30. Not a dollar has been charged to capital account that should have been charged to revenue. The system has earned sinking fund and funds for the redemption of serial debentures amounting in all to $744,036.94, and since the maintenance of the system's plant has been paid for out of revenue, and replacements have been provided for by the establishment of a depreciation reserve, it will be evident that the surplus and sinking funds together, amounting in all to $819,856.24, constitute the net earnings of the enterprise over and above all operating interest and depreciation charges for the period under consideration.

"The conditions existing during the year 1917 have been unusual, and the business of the system has undoubtedly been affected by the power shortage to which further reference is made below. Notwithstanding the fact, the gross income for the year 1917 was 20.1 per cent. in advance of that in 1916. The increase in the commercial income was 29.3 per cent. The commercial income for the year amounted to 71.8 per cent. of the total, against 67 per cent. in 1916, 66.4 per cent. in 1915, 63.9 per cent. in 1914 and 59.05 in 1913."

The average charge per kilowatt hour for service supplied by the system reached a new low record during the year. For residence lighting it was $2.70, for commercial lighting $2.16 and for commercial power 80 cents. The commissioners continue their review of the operations of the system as follows:—

Power Shortage.

"Owing to the heavy demands upon the Hydro-Electric Power Commission of Ontario, from which the power sold by the system is purchased, and the urgency of these demands due to the fact that the principal requirements are for the manufacture of war supplies, it was considered advisable during the month of October to cease canvassing for new business in order to save as much power as possible for this important national work. The situation has at times been difficult, especially during the winter months, and it has been necessary since the first of the present year to reduce the number of street lights. Stringent regulations are in force prohibiting the use of lighting for advertising and display purposes. During periods of acute shortage, preference is given to feeders carrying the largest proportion of munitions load and the balance is distributed as equitably as possible. The commissioners wish to express their appreciation of the splendid spirit shown by the customers of the system in their full co-operation with them recognizing clearly that the shortage is a consequence of the abnormal circumstances due to the war.

Capital Requirements.

"By-law No. 7875, authorizing a further issue of $736,000 debentures for the system's purposes maturing 1937, was passed by the city council and approved by the Ontario Railway and Municipal Board during the year.

"The financial position during the war is such that it is difficult to dispose of municipal debenture issues to advantage, apart from which it is the duty of all to limit capital expenditure to the utmost possible extent. The commissioners have had to make a considerable outlay during the year, particularly in connection with the large munitions contract referred to in the general manager's report, but have borne in mind the importance of making only such additions to the system's plant as were necessary for safety and proper service.

Fire at Head Office.

"On the night of September 27th, the head office of the system, at 226-8 Yonge Street was visited by a fire which destroyed the contents of the basement and ground floor, and damaged the contents of the second floor. Fortunately, the more important records of the accounting department were saved, so that the disorganization was not as great as might have been expected, and by considerable overtime work on the part of the staff, it was found possible to resume billing at a comparatively early date. Temporary premises were secured which enabled the service to the public to continue with little interruption. The financial loss was covered by insurance. This incident emphasizes the desirability of improved quarters for the system's records and staff, a matter which the commissioners have had in mind for some time, but which has been delayed on account of war conditions.

Increased Transmission Line Facilities.

"Construction has proceeded on the new line of the Hydro-Electric Power Commission from Dundas to Toronto. During the year a right-of-way was purchased within the city limits. This line, when completed, will afford increased security against interruptions.

Power Factor Charges.

"The power factor of the system, provision for the correction of which has been unavoidably delayed owing to the financial situation caused by the war, fell below the mark during the year, and a heavy power factor penalty was incurred. This is a matter difficult to explain without recourse to technicalities, but the conditions may in a few words be said to result most generally from customers having apparatus of greater capacity than they require. The system's contracts with its customers provide an extra charge for low power factor, and the necessity of observing the hydro principle of supply at cost without discrimination, as well as the power shortage, calling, as it does, for the adoption of every possible economy, has obliged your commissioners to insist on the power factor clause in the system's contracts being observed, since the use of current at low power factor unnecessarily absorbs the capacity of the generating plant and transmission lines, and is therefore equivalent to a waste of power.

Interurban Electric Company.

"The purchase of the assets of the former Interurban Electric Company, which was noted in the sixth annual report, was completed during the year 1917, and the customers were transferred with a minimum of inconvenience to the lines of the system. The system, though under no obligation to do so, maintained a 60-cycle supply for some months after taking over the assets in question. This involved considerable expense, but it was felt that a sudden discontinuance of the 60-cycle supply would result in undue hardship to a number of customers, since it would mean that to the expense of replacing their apparatus, there would have been added the inconvenience of being without service until such time as the change could be effected.

Toronto and Niagara Power Company.

"In view of its relation to the present and future interests of the Toronto hydro-electric system, your commissioners wish to call attention to a matter of great importance—viz., the question of whether the charter of the Toronto and Niagara Power Company, can be utilized to enable the Toronto Electric Light Company to maintain its poles in the streets of the city of Toronto, or to serve as a basis for establishing a new distribution system without the city's consent. The charter of this company was granted by special act of the parliament of Canada in 1902, and, if it can take over the poles and wires of the Toronto Electric Light Company, it will mean not only that the city has lost control of its streets to a company with unrestricted and perpetual powers, but that it has lost also its terminable rights under the agreement with the Toronto Electric Light Company to purchase the assets of that company in 1919, and to prevent the amalgamation of that company with any other. Your commissioners visited Ottawa with the hydro delegation early in the

present year and made a special appeal to the government to safeguard the rights of the city in this matter.

"In common with all other business institutions, the system has lost during the year the services of certain members of its staff due to the enforcement of the Military Service Act. Owing, however, to the fact that most of the system's original employees liable for military service had already volunteered, and the policy which had been followed, wherever possible, of engaging only those unsuited for military service (giving special preference to returned soldiers), the numbers of men subject to the draft amounted to a small percentage of the whole.

"Substantial outlays have again been necessitated during the past year by way of allowances to employees on active service and their dependants."

DISPUTE WITH CIVIC EMPLOYEES

The city of Toronto is having a dispute with some of its employees on the question of wages. The employees involved are chiefly those of the works and garbage commissioners' departments. A wage increase was granted within the past year, and it is maintained by some members of the council that the men are now receiving more than the wages paid for similar labor in private industry. Some members of the council were in favor of having a board of conciliation appointed. On Thursday, the 20th inst., the council met four representatives of the union, but no satisfactory agreement was arrived at.

STATUS AND PROSPECTS OF LIFE INSURANCE

An Australian view of the present position and future prospects is outlined in the address of Mr. Selby P. Wood at a recent meeting of the Australian Provincial Assurance Association. The speech was made on the occasion of the removal of the association into the premises until lately occupied by the Commonwealth Bank of Australia, Sydney, N.S.W. Since the organization of the Australian Provincial Assurance Association in 1912, two changes in office accommodation have been necessary as a result of rapidly-growing business.

Mr. Wood spoke as follows:—

"Many people consider that after the war things are going to be bad. There are always pessimists, but I am an optimist, and I feel confident that when the war is over there will be an awakening of spirit and a relaxation of feeling, and such a general rebound that things will be brighter and better than ever they were before.

"We are sometimes inclined to talk about the good old days, but would we return to them? The good old days, when a meal could be bought for sixpence, but in those days the sixpence was very hard to earn. Better have a meal at half-a-crown and have the half-crown to pay for it, and something over. The good old days, when education was a matter of secondary importance, and which compares very unfavorably with the present day, when the poorest and humblest in the land can receive a sound education free of charge. It is possible in these days of modern educational opportunities for the humblest parent to say that it is possible his child may one day fill an important position in the State. The good old days, when sanitation was comparatively unknown. I think we would not like to return to these things.

"From an insurance point of view, in the good old days people were very ignorant, and even superstitious, about insurance business. There has been a long, gradual and general education in this respect, and the pioneers of the old insurance companies have fought our battles for us, and educated the people of the Commonwealth as to the benefits desirability, and almost the necessity for life assurance.

"The general increased educational facilities also contribute to the popularity of life assurance, as the more intelligent and educated people are, the greater the adherents of life assurance.

"After the war is over, I think the lot of the workingman is going to be brighter and better than ever before. I do not think the world will ever be content to return to the pre-war conditions. As far as Australia is concerned, I think the only thing that will retard its progress is bad seasons, and this is something over which we have no control. After the war I feel confident we are going to do incalculably better than ever before."

WAR PRISONERS IN TURKEY AND BULGARIA

The following announcement has been made by the post-office department at Ottawa:—

A notification has been received from the British authorities to the effect that the parcel post service for prisoners of war in Turkey or Bulgaria is at present suspended. Until this service is resumed no parcels can be forwarded to prisoners of war in Turkey or Bulgaria, and persons desiring to help prisoners of war in these countries are advised to forward remittances to them. These can be sent by means of post-office money orders, which are issued free of commission. Particulars as to how to proceed may be obtained from postmasters of accounting offices. Any parcels for prisoners of war in these countries which may be intercepted in the course of transmission will be returned to the senders, providing the name of the senders is given on the parcel

PROMOTION OF COMPANIES

The Blue Sky legislation of the United States has, it is pointed out, fallen short in some ways of its purposes. There are some states which have not as yet enacted legislation of this kind, and these states have become centres of promotion. Included among them are Oklahoma and Colorado, which have for a long time been noted as centres of oil promotion. The object of the laws in states which have passed legislation has, moreover, been defeated by sales campaigns on the part of companies incorporated in other states which have no such legislation. The national vigilance committee of the Associated Advertising Clubs of the World has recently called the attention of the press to this matter and requested their co-operation in meeting the spirit of the legislation. Reference is also made to a resolution passed by a session of the Blue Sky commissioners of the various states, which reads as follows:—

"That we stand ready to co-operate in the fullest measure with the publishers of the United States in the interest of clean advertising, and that the publishers be requested to co-operate with the various states to the extent of refusing to publish advertising matter concerning stocks and securities offered for sale by any corporation, or on its behalf, contrary to the Blue Sky laws of the state in which such advertising is offered."

SASKATCHEWAN GENERAL TRUSTS CORPORATION

In spite of the active competition of other trust companies, the Saskatchewan General Trusts Corporation, Limited, has attained remarkable success during its eight years of business. The corporation was organized in 1910 by Saskatchewan men. The shareholders are all Saskatchewan people, and the directors are Saskatchewan business and professional men of high standing. The company has also been financed with Saskatchewan capital, and the profits have been derived from within the province and dividends distributed there. A dividend of 5 per cent. on the stock has been paid for three years. This provincial characteristic has, no doubt, been in some degree responsible for the company's progress, and, combined with a policy of careful management, the business has grown to such an extent that further capital is considered necessary. The details regarding the price, etc., are not yet announced, but it is evidently the intention of the company to do the further financing within the province. The paid-up stock now outstanding is $101,430. There is also a reserve of $30,000.

The amount of estates and trusts under administration is $530,570, which is a very creditable total for a young company operating only in the province of Saskatchewan. During the past three years, in addition to paying the dividend of 5 per cent., amounts have also been transferred to reserve or carried to profit and loss account, at the credit of which there is now $4,581. The books of the company are audited by Rooke, Grant, Wilkinson and Company, chartered accountants. Mr. W. T. Mollard, president, and Mr. E. E. Murphy, general manager, have been in charge of the company's affairs since it began business. The other directors are: George H. Barr, K.C., J. A. McBride, Esq., Charles Willoughby, Esq., J. A. M. Patrick, K.C., David Low, M.D., William H. Duncan, Esq., Herbert E. Sampson, K.C., LL.B., William Wilson, Esq., A. L. Gordon, K.C.

By Order of the Board
E. L. MORTON, Manager.

Toronto, 20th June, 1918.

(For further Dividends see page 40.)

INDUSTRIAL RECONSTRUCTION ASSOCIATION

Comprehensive Programme Outlined for Present and After-the-War Period

The Canadian Industrial Reconstruction Association, of which Sir John Willison is president, has issued the first report of its executive committee, as follows:—

"The executive committee recommends for consideration:—

"(1) That in order to stimulate national unity and in recognition of the advantages of a good understanding between Quebec and the English-speaking provinces five scholarships in French for students from the English provinces be established in Laval University and five scholarships in English for students from Quebec in the University of Toronto, and that in connection with such courses the English students be maintained for one year in France and the French students for one year in Great Britain.

"(2) That the association by appeal and argument encourage groups of industries which have common problems to follow the example of the tanners, the textile industries and the pulp and paper makers in order that through co-operation in scientific research in processes of manufacture and in methods of marketing the advantages of large capital and practical experiments may be obtained and greater economy and efficiency in production assured.

"(3) That the association by appeal to financial and industrial interests and private capitalists and to the federal and provincial governments, endeavor to have graduate research facilities established in the universities of McGill and Toronto, where training can be had equal to that secured in the great American universities. It seems to be clear that such faculties will be a vital requirement when the National Research Institute is established by the Dominion government. If the industries are to avail themselves fully of the facilities for research which it is the intention of the national advisory council for scientific and industrial research to provide the universities must supply the trained experts to conduct necessary experiments.

"(4) That a postgraduate scholarship or fellowship be offered in the departments of economics of McGill, Toronto and Manitoba universities, successively, open to women graduates of any Canadian university, for the purpose of carrying on research work of an economic character in the industrial or home-making occupations of women.

"(5) That a matriculation scholarship be offered at various Canadian universities, open to girl matriculants from high schools, collegiate institutes and women's colleges, for the best essay on the economic importance from the national standpoint of household buying or on the training of girls for skilled employment.

"(6) That by arrangement with the ministers of education in the different provinces, prizes be offered for essays by school children on national industries or on the value of trade training in finding advantageous employment.

"(7) That the executive committee of the association consult with Hon. Frederic Nicholls, with the object of assisting in the movement which he has inaugurated to interest the Dominion government in the vital problem of export markets and in organizing the industries of the country for an efficient partnership with the administration in finding, extending and developing trade in other countries, particularly during reconstruction in Europe, in confidence that such trade once secured will be held to the common advantage of Canada and the other countries concerned.

"(8) That the association through its executive committee endeavor to arrange for a conference with the mayors of western towns and cities with the object of obtaining more accurate knowledge of conditions in the western provinces, the extent and character of their natural resources and the opportunities for establishing new industries or branches of eastern industries in favorable locations.

"(9) That delegates representing agriculture, the commercial and industrial interests and the universities and newspapers of Western Canada be invited to visit the industrial communities of Eastern Canada, as the guests of the association, with the understanding that an invitation to members of the association to visit the West would be accepted and that the sole purpose of such deputations should be to acquire more exact knowledge of national conditions and problems.

"(10) That the association try to arrange conferences with the Railway Brotherhoods and the Great War Veterans' Association for mutual consideration of problems of reconstruction and to ensure co-operation as far as may be found practicable between the business interests and those bodies, in devising and supporting measures which may seem to be necessary to maintain stability and prosperity.

"(11) That the association undertake to organize or co-operate in the organization of a national conference to consider primary education in relation to the duties of citizenship and to which distinguished educationists from Great Britain and the United States would be invited.

"(12) That the executive committee have a pamphlet prepared, showing what steps are being taken in other countries to improve relations between employers and workmen and what regulations or agreements affecting particular industries are being tested or are under consideration.

"(13) That the association issue an appeal to employers and industrial companies to have conferences with their workmen in order that the staffs of manufacturing and other business enterprises may have fuller knowledge of conditions affecting raw materials, available markets, the character and the degree of competition to which they are exposed and the problems of readjustment when peace is restored.

"(14) That the executive committee also have pamphlets prepared for publication in newspapers or periodicals or by direct publication under the auspices of the association as may be convenient or desirable on the following subjects:—

"(a) Democracy and public credit; (b) lessons of the French Revolution; (c) irresponsible government in Russia; (d) combination, co-operation and efficiency; (e) debt and taxation before and after the war; (f) relation of the banks to agriculture, industry, and national development; (g) waste in local works and public buildings; (h) sources and incidence of taxation in Canada and the United States; (i) British agricultural and commercial policy; (j) the relation of wage earners to Japan and the United States; (k) state aid for industry; (l) federal and provincial assistance to agriculture in Canada; (m) advantages of local markets; (n) farm products produced, exported, and consumed in Canada; (o) The national advantage of importing factories and exporting finished products; (p) the partnership of women in industry; (q) the home, the shop and the factory; (r) taxation of incomes and profits."

LABOR AND LABOR UNIONS

Since the entrance of the United States into the great world war, union labor has utilized its political power to secure for itself advantages in the way of increased wages, decreased hours and other regulations which, under ordinary circumstances, would be regarded as economically impossible. Furthermore, the Socialist idea of government control of industry now appeals to labor, which seeks to utilize that control in order to make its own position better. Union labor, in fact, is reaching out for all kinds of alliances and within the past few months has sought to unionize negroes and also to unionize unskilled labor and women workers. There is a distinct purpose in all these plans.

The advantages which labor really has gained has led to a very definite programme which contemplates no failure in the future and a consolidation of all organizations which may strengthen its position. It has already been announced by union labor leaders that what they have secured in the war they intend to retain, and, no matter what the economic circumstances may be, they are prepared to defend the high wages, shortened hours and the peculiar privileges which they have been able to obtain through the quasi-Socialistic situation which necessarily exists because of the war—that is, the apparent control and direction of industry by the government.—"American Industry."

The Union Casualty Company, of Winnipeg, recently purchased the Western Canada Accident Company. The company is licensed to do business in all three prairie provinces, and has a paid-up capital of over $75,000.

For July Investment

OUR "INVESTMENT SUGGESTIONS"
for June contains the following five attractive issues:

Canada's Victory Loan
5-10-20-Year BONDS
Denominations :
$50, $100, $500 and $1,000
Price 99½, yielding 5.54%

Government of Newfoundland
(Britain's Oldest Colony)
6½% Ten-Year BONDS
Due June 30, 1928
Price 100 and Interest, yielding 6½%
Denominations :
$100, $500 and $1,000

City of Calgary
7% Ten-Year GOLD DEBENTURES
Due June 1, 1928
Denominations :
$500 and $1,000
Price 100 and Interest, Yielding 7%

City of Montreal
6% Five-Year BONDS
Due May 1, 1923
Price 100 and Interest, yielding 6%

Atlantic Sugar Refineries Limited

Report of the President and Directors for the Year Ending April 30th, 1918.

To the Shareholders,—

REPORT OF THE DIRECTORS.

ATLANTIC SUGAR REFINERIES, LIMITED.

Your Directors take pleasure in presenting herewith the third Annual Statement of your Company for the year ending April 30th, 1918.

The Profits for the year, as you will see from the Profit and Loss Account, amount to $462,676.50. From the Profits have been deducted the following amounts:—

Bond Interest	$88,700.00
Bank Interest and Exchange	90,882.66
Proportion of Deferred Charges	33,991.22
Proportion of Discount on Bonds	2,321.06
Depreciation Reserve	40,000.00

leaving a net profit for the year of $206,781.56. The balance of $116,657.55 brought forward from the previous year, added to the above, makes a total of $323,439.11 at the credit of Profit and Loss Account.

It will be noted that Bank Interest and Exchange have been very heavy and this is accounted for by the fact that during the greater portion of the period New York funds, in which payment for raw sugar purchases must be made, have been at a high premium.

The Total business for the year amounted to over $10,000,000, showing an increase over the previous year of over 25 per cent. A portion of the year's business was for export to Great Britain and France, but the domestic business showed a gratifying increase over the previous year.

The net profits amount to about 2 per cent. on sales or about 15 cents per 100 pounds.

The Refinery was operated steadily throughout the year, with the exception of the necessary shut-downs owing to non-arrival of raw sugar. The plant has been maintained at the highest degree of efficiency, and additions and betterments to the value of $50,220.78 have been made and added to Capital Account.

The shortage of raw sugar which occurred during the last three months of 1917; the scarcity of tonnage to move the sugar crop; the curtailment of supplies for Canada, and the fixing of prices by the International Sugar Commission have all been factors in limiting profits.

In October, 1917, a limiting factor was placed on the amount of business the company may do by the formation of the International Sugar Commission in New York to control and allocate all supplies of raw sugar in North America. All of the Allied Countries submit to the ruling of this Board, and the quantity is allocated to the various Canadian Refiners by the Sugar Division of the Canada Food Board in New York, and the business of each Company is therefore limited to the extent of its allocation. Under the circumstances your Executive and Directors find it necessary to conduct the business of the Company on a modest scale, notwithstanding the constant and increasing demand of the trade.

The distribution of the Company's product extends from Halifax to Calgary, and the Goodwill of the Company is being constantly fostered and extended with very satisfactory results.

On July 1st, 1917, the Company redeemed outstanding Bonds amounting to $50,000, in accordance with the terms of the Trust Deed.

Taking into consideration all the difficulties that the sugar business has had to contend with during the past nine months, your Directors consider the statements herewith presented satisfactory.

Respectfully submitted,

D. LORNE McGIBBON,
President.

June 21st, 1918.

Acting General Manager.

BRITISH TRADE CONNECTIONS

Mr. Fred. W. Field, British trade commissioner in Canada, is desirous of getting in touch with manufacturers' agents who wish to obtain the Ontario agencies of United Kingdom firms, either now or after the war. He would also be pleased to discuss with agents and importers any obstacles to the encouragement of British trade in Ontario of which they may be aware, aside from war conditions. Samples of German or Austrian merchandise sold in Ontario prior to the war would also be useful to him; many agents now, no doubt, have no further use for samples of this kind.

In his office in the Confederation Life Building, Toronto Mr. Field has now been engaged for some time in the work of encouraging closer trade connections between Canada and the United Kingdom. Just at present the work is rather of a preparatory nature, with a view to greater activity after the war.

The steamship "Porsanger," considered to be the largest ocean-going steamer yet built in this country, was launched the other day in Montreal. It was built mostly of Canadian materials, although the plates were imported from the United States.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members Toronto Stock Exchange, 103 Bay Street Toronto:—

A Practical Pointer on Salesmanship

It is of first importance in good salesmanship to select a worthwhile article to sell, something about which you can become enthusiastic with a reason—a reason that will last. In Life Insurance Salesmanship, for instance, a discriminating agent would naturally select the policies of the Mutual Life of Canada because—first, the Company is well-established—Second, it has an unblemished record—Third, it has a continental reputation as a dividend payer—Fourth, it is a democratic organization—Fifth, it is a wonderfully successful going concern—and lastly, being the only Canadian Policyholders' Company its contracts find a ready market. Where a company is so favorably known one half of the trouble of making the sale is avoided. If you get the best goods in your line and go to it, success is certain. Last year our agents placed $20,000,000 paid-for business.

LIFE INSURANCE MORE NECESSARY THAN EVER

We know very well that the familiarity with the usual stock reasons for insuring life, and limb as well, often act in a way rather to hinder those reasons from receiving in numerous cases the real thought and attention that they certainly merit. Still, it must be very clear to every thoughtful mind that the reasons why a man should insure his life are really unanswerable and absolutely convincing, that to do so is only a duty and nothing less. Death, however, often postponed, is certain in the end, and then, in the vast majority of cases, with the death of the family man, there generally comes terrible reduction in income, even when that income does not cease altogether. In the course of nature, children survive their parents, and the great majority of women outlast men, especially men in the great active business arenas of the competitive world. In fact, we here deal with certainties, not mere suppositions, as everybody knows. For one highly important thing, to insure your life is actually to commence the creation of capital. How can men of marked ability, earning fair, and even large incomes, fail to know very well that, forced by circumstances too powerful to be resisted, their death will see most of that income dissipated? Then, indeed, if the individual had his time over again, a way would have been found to avert disaster to the survivors. It is very difficult to conceive any case much worse than for a family living in full comfort, with not a little luxury added, to be abruptly precipitated into what is to them a social inferno whence there is no visible escape. But it has been justly said that insurance is in a way able to create capital, and how many thousands of really able, clever men, though generally successful in their particular lines of active life, find it virtually impossible to accumulate capital? Obviously, to the extent to which the amount assured exceeds the premiums paid, it is clear that we have a creation of capital. It is by that excess just so much money never earned, and money that could never come to a man's beneficiaries in any other way. Many a man borrows money just to provide a home for his family, but we know that besides interest thereon that loan must eventually be paid in full, and certainly there is no capital left out of that transaction. Now, in life assurance, and in that alone, do we find this most invaluable element. It is not present in any other form of financial business projected into futurity. Then, again, consider the wonderful security of the funds forming the security for paying according to promise. All other financial undertakings are liable to vicissitude capable under certain extreme conditions of reducing, and even of extinguishing their value altogether. Even banks, as we all know, are not absolutely safe, but the insurance company alone stands forth positively proof against all conceivable financial shocks and altogether certain to fulfil to the very letter every promise made. Why, then, one asks with a natural surprise, do so many otherwise clever men hang back from taking insurance, and especially why do the young just entering on life hang back when commonsense should warn them that later on in all probability they will be but too thankful to take insurance on a much more expensive lease than when youth was in itself a fine asset in such transactions. But in the present case we think that all insurance agents, as insurance men generally, might very aptly direct attention to the certainty of life being much harder when peace comes again, certainly for a time, and when those covered well by insurance will most decidedly have a great advantage over those who have not been so prudent. Further, the very consciousness of being thus protected cannot fail to inspire confidence and courage, and those properly covered will have a far better chance of success in the battle of life than such as have refused to take warning by past experience when hard times come to stay. It is pretty certain that a greatly disordered national finance and a hundred other evil legacies from so destructive a war cannot fail to induce a period of trouble for thousands only less evil than the war itself!—Insurance and Finance Chronicle.

The new building of the Sun Life of Canada in Montreal has been almost completed. It occupies a corner overlooking Dominion Square, and is seven stories high, but is so constructed that ten more stories could be added. The exterior is of grey granite on a frame of structural steel. A fireproof vault, built on separate foundations, runs upward through all floors. The building also includes a dining-room and lounge-rooms.

UNION OF CANADIAN MUNICIPALITIES

The eighteenth annual convention of the Union of Canadian Municipalities will be held in Victoria, B.C., on Tuesday, Wednesday and Thursday, July 9th, 10th and 11th. It is expected that delegates will be present from all over Canada, and representatives of the Dominion Civic Improvement League will also attend. A large number of subjects are to be discussed at the meetings, and the following special papers will be read: "The Maintaining of Montreal Credit," by Thomas Bradshaw, commissioner of finance, Toronto; "The Consolidated Railway Act; Contest over Fundamental Municipal Rates," by W. D. Lighthall, K.C., honorary secretary-treasurer, Union of Canadian Municipalities; "Present Position of Uniform Municipal Accounting and Statistics," by H. J. Ross, chairman of the special committee; "National and Municipal Housing," by Thomas Adams, town planning adviser, Commission of Conservation; "Municipal Responsibility in Regard to Economic Development of the Land," by J. N. Bayne, deputy minister of municipal affairs, Regina, Sask.

The previous conventions have been held in the following cities:—

Toronto, Ont.	August, 1901
Montreal, Que.	September, 1902
Ottawa, Ont.	September, 1903
London, Ont.	September, 1904
Winnipeg, Man.	July, 1905
Halifax, N.S.	August, 1906
Fort William, Ont.	August, 1907
Port Arthur, Ont.	August, 1907
Montreal, Que.	July, 1908
Medicine Hat and Calgary, Alta.	July, 1909
Toronto, Ont.	August, 1910
Quebec, Que.	August, 1911
Windsor, Ont.	August, 1912
Saskatoon, Sask.	July, 1913
Sherbrooke, Que.	August, 1914
Montreal, Que.	August, 1916
London, Ont.	August, 1917

Mr. W. D. L. Hardie, mayor of Lethbridge, is president for the year 1917-18. Mr. Robert Ryan, alderman of Three Rivers, Que., is vice-president. There are also special committees for each province to deal with questions more of a local nature.

The union lays down the following rules:—

(1) The Canadian people shall not be ruled by any irresponsible monopoly.

(2) They shall not submit to methods of fraud or corruption.

(3) There must be no perpetual franchises.

(4) Our heritage of natural resources affecting municipalities must not be sold, but leased, if not publicly operated.

(5) One generation cannot legislate away the rights of another.

(6) Municipalities must control their streets.

(7) Each Canadian shall have a fair deal from all who are granted corporated or other public privileges.

(8) Some court or council must always exist, free and equipped to enforce the fair deal.

(9) The life of the poorest citizen must be made worth living through his share of the best civic conditions and services.

The advantages of the union are explained as follows:—

1. Intercourse of a mutually profitable character between municipal authorities of all kinds, from the Atlantic to the Pacific, resulting in the stimulus derived from broad experience and knowledge, and also in the encouragement which comes from a spirit of fraternity.

2. The immense increase of power derived from combination and co-operation, which is at the service of the individual municipality when required for its protection and improvement.

3. A patriotic spirit is fostered by intercommunication.

4. The bureau of information is possessed of central facilities not easily brought together elsewhere.

5. Communication with and respectful attention by foreign bodies are facilitated and increased.

6. Enormous sums of money and money values are annually saved to the municipalities.

Solid Growth

UP-TO-DATE business methods, backed by an unbroken record of fair-dealing with its policyholders, have achieved for the Sun Life of Canada a phenomenal growth.

Assurances in Force have more than doubled in the past seven years and have more than trebled in the past eleven years.

To-day, they exceed by far those of any Canadian Life Assurance Company.

Warner, Alta.—June 19—The town was almost completely wiped out. Estimated loss, $250,000.

Welland, Ont.—June 23—Some small buildings on Main Street near the river were destroyed. The property damaged was Mr. R. Cooper's straw shed, R. Moore and Son's auto repair shop, and Round's lumber store. Estimated loss, $7,000.

Windsor, Ont.—June 23—Three houses on Montmorenci Street were damaged. Cause reported as incendiarism. Estimated loss, $4,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Vancouver, B.C.—Fire Chief Carlisle submits the following report for the month of May to *The Monetary Times*:—

The total damage resulting from fire for that period, excluding figures in connection with the Coughlan loss of May 15th, the adjustment of which has not as yet been completed, was $10,208, of which amount $5,751 was covered by insurance, leaving the property loss above insurance at $4,457. The total value of the property involved by fire for the month (excluding Coughlan's property valuation) was $1,861,995.

The following shows the cause of fires for the month: Backfire (carburetter), 2; bush fires, 27; carelessness with cigarettes, matches, etc., 3; chimney fires, 9; defective chimney, 2; electrical origin, 2; fire breaking out again, 1; firewood drying in oven, range, etc., 2; flying sparks from chimneys, burners, smokestacks, etc., 18; gasoline (lighted match near), 1; hot ashes placed in wooden receptacles near wooden doors, sheds, etc., 3; lighted pipe left in coat pocket, 1; overheated furnace-pipes falling down, 1; overheated pressing iron, 1; overheated stove, 1; overheated stovepipes, 1; shingles thrown near furnace door, 1; spontanous combustion, 2; and unknown causes, 3.

ADVANCE IN AMERICAN EXCHANGE

New York exchange made a still further advance during the week just ended. Quotations were as high as 2⅜ to 2 7/16 per cent. premium, and one transaction at 2½ per cent. premium took place. During the same period last year, the premium was only one-sixteenth of 1 per cent. The advance is to some extent due to the finance minister's announcement that no arrangement had been made for a Canadian loan in New York.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	2 7-16	2 15-32	....
Mont. funds	Par	Par	⅛ to ¼
Sterling—			
Demand	$4.86.70	$4.87	$4.89
Cable transfers	4.88	4.88.20	4.90

Sterling demand in New York, $4.75 5-16.
Bank of England rate, 5 per cent.

HALIFAX SHIPBUILDING PROGRESS

The executive of Halifax Shipyards, Limited, has been announced as follows: James Carruthers, president; J. W. Norcross, vice-president and managing director; Roy M. Wolvin, vice-president; M. J. Haney, treasurer; F. S. Isard.

Plans have been completed for the commencement of the work and the site of the plant and the drydock have been fully inspected.

"When our plant is completed," said Mr. Norcross, "we will have established at Halifax one of the finest shipyards in America. We have chosen the best site available, a site which is admirably suited. Adequate arrangements for procuring the steel plates necessary to ship construction have been made. All the labor available at Halifax will be used first. Some 3,500 men will be required at the plant."

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first three weeks of June:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
June 7	$2,927,000	$2,846,000	— $ 81,000
June 14	3,165,000	2,914,000	— 251,000
June 21	2,939,000	2,849,000	— 90,000

Grand Trunk Railway.

June 7	$1,333,194	$1,383,669	+ $ 50,475
June 14	1,348,185	1,541,392	+ 193,207
June 21	1,441,424	1,621,993	+ 180,569

*Canadian Northern Railway.

June 7	$ 908,700	$ 847,100	— $ 61,600
June 14	916,800	853,100	— 63,700
